LICENSED CONTRACTORS DECLARATION		WORKER'S COMPENSATION DECLARATION	
I hereby affirm that I am licensed under provisions of Chapter 8 of the City of Long Beach, California, and my license is in full force and effect. License Class: _____ License No: _____ Date: _____ Contractor: _____ OWNER-BUILDER DECLARATION I hereby affirm that I am exempt from the Contractors License Law for the following reason (Sec 7031 California Business and Professional Code): Any City which requires a permit to construct, alter, improve, demolish or repair any structure prior to its issuance also requires the applicant for such permit to file a signed statement that he is a licensed contractor pursuant to the provisions of the Contractors License Law (Sec 7031 of Div 3 of the B & P C) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Sec 7031 & 7032 of the Contractors License Law is subject to a civil penalty of not more than five hundred dollars (\$500.00). I am owner of the property or my employees with wages as their sole compensation will do the work on the structure is not intended or altered for sale (Sec 7044, B & P C). The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that work improvements are not intended or altered for sale. However, the building or improvements is sold within one year of completion, the owner-builder will have burden of proving that he did not build or improve for the purpose of sale. I am owner of the property, am personally contracting with licensed contractors to construct the project (Sec 7044, B & P C). The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that work improvements are not intended or altered for sale. However, the building or improvements is sold within one year of completion, the owner-builder will have burden of proving that he did not build or improve for the purpose of sale. I am not exempt under Sec. _____ B & P C. My reason is: _____ INSURANCE Application is hereby made to the Superintendent of Building and Safety for a permit subject to the conditions and restrictions set forth on the front faces of this application. 1. Each person upon whose behalf this application is made and each person at whose behalf work is performed under or pursuant to any permit issued as a result of this application agrees to and shall indemnify and hold harmless the City of Long Beach its officers, agents and employees from any liability arising out of the issuance of any permit from this application. 2. Any permit issued as a result of this application becomes null and void if work is not commenced within one hundred eighty (180) days from date of issuance of such permit.		I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance policy no: Carrier: <u>Chas. Kelly</u> Number: _____ (This Section need not be completed if the permit is for one hundred dollars (\$100) or less.) I affirm that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California and agree that if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with State provisions. Date: _____ Signature: <u>BTJ</u> WARNING: FAILURE TO SECURE WORKERS' COMPENSATION COVERAGE IS UNLAWFUL AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS, IN ADDITION TO THE COST OF COMPENSATION DAMAGES, AS PROVIDED FOR IN SECTION 3700 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES. I hereby affirm that there is a construction, loading agency for the performance of the work for which this permit is issued (Sec. 2507, P.C.). Loader's Name: _____ Loader's Address: _____ I certify that I have read this application and state that the above information is correct and I agree to comply with all City and State laws relating to the building construction and hereby authorize representatives of this City to enter upon the above mentioned property for inspection purposes. Signature of Owner or Contractor: <u>BTJ</u> Date: _____

DEPARTMENT OF ENGINEERING
BUILDING INSPECTOR
 Application for Building Permit

FOR TYPE NO. **5** BUILDING

Permit Number 7-7055
Date Received 8-12-41
Date Issued 8-29-41

To the Department of Engineering of the City of Long Beach:

Applicant hereby certifies to the Department of Engineering of the City of Long Beach, through the office of the Building Inspector, for a building permit as submitted with the drawings and for the purpose hereinafter set forth. This application is made subject to the following conditions which are hereby agreed to by the undersigned applicant and which shall be deemed conditions running with the issuance of the permit:

First: That the permit does not grant any right or privilege to erect any building or other structure therein described, or any portion thereof, upon any street, alley, or other public place or portion thereof.

Second: That the permit does not grant any right or privilege to use any building or other structure therein described, or any portion thereof, for any purpose that is, or may hereafter be prohibited by ordinance of the City of Long Beach.

Third: That the granting of the permit does not affect or prejudice any claim of title to, or right of possession to, the property described in such permit.

To the Department of Building and Safety of the City of Long Beach

Application is hereby made to the Department of Building and Safety of the City of Long Beach through the office of the Superintendent of Building for a building permit in accordance with the description and for the purpose hereafter set forth. This application is made subject to the following conditions which are hereby agreed to by the undersigned applicant and which shall be deemed to be part of the permit when the permit is issued:

First: That the permit does not grant any right or privilege to erect any building or other structure thereon described or any portion thereof upon any street, alley or other public place or portion thereof.

Second: That the permit does not grant any right or privilege to use any building or other structure thereon described or any portion thereof for any purpose that is or may hereafter be prohibited by ordinance of the City of Long Beach.

Third: That the granting of the permit does not affect or prejudice any claim of title in so far as it is subject of possession in the property described in each permit.

ADDRESS 1210 N. LAS BRISAS ANAHEIM CA. PHONE 714 630-3633

This application and permit is for the removal ☒ abandonment of tank(s) identified on this form, and shall only be valid and in force for a maximum of ten (10) working days from date of application.

Permittee or his authorized agent shall notify the Hazardous Materials Unit, Long Beach Health Department, Phone No. (213) 427-4522 and Bureau of Fire Prevention, Long Beach Fire Department, Phone No. (213) 435-2458 a minimum of 72 hours prior to the removal or filling of any tank(s). An official from each of these two departments shall be present at the job site to witness the removal or filling of any and all tanks. All directions made/given by these City officials shall be followed within a timely and reasonable fashion.

When any underground storage tank(s) is/are removed from the ground, the resulting excavated site shall be secured in an appropriate manner until filled. Any excavation shall be temporarily backfilled or enclosed by a fence with a minimum height of six (6) feet. If the foregoing security measures are impractical, a security guard shall be provided, until the completion of the permit, by the permittee and at the expense of the permittee. The structural integrity of the tank(s) shall be maintained during removal and transport. Tank(s) removed from the ground are not permitted to remain at the site or within the City limits overnight. No temporary or permanent storage of any used hazardous or flammable liquids/materials storage tank(s) is/are permitted within the City limits of Long Beach.

The removal or filling of any tank(s) shall be in accordance with Long Beach Municipal Code, Title 18.46; California State Health and Safety Code, Division 20, Chapter 6.5; the Uniform Fire Code, Articles 79 and 80; and LBFD Fire Prevention Requirements, the 14 series.

I, THE UNDERSIGNED, HAVE READ COMPLETELY AND FULLY UNDERSTAND THE ABOVE LONG BEACH FIRE DEPARTMENT REQUIREMENTS WHICH APPLY TO THIS APPLICATION AND PERMIT. I, THE UNDERSIGNED, ATTEST TO THE BEST OF MY KNOWLEDGE, UNDER THE PENALTY OF PERJURY, THAT THE ABOVE PROVIDED INFORMATION IS TRUE AND CORRECT. I, THE UNDERSIGNED, ACCEPT THE CONDITION THAT ANY DEVIATION(S) FROM AND/OR MISINFORMATION ON THIS FORM WILL RENDER THIS APPLICATION AND PERMIT NULL AND VOID.

VIOLATIONS	CLASS		The marked items represent violations of the above-referenced code(s) and must be corrected as follows:
HAZARDOUS WASTES	I	II	
Haz. Waste Determ.		1	(A) Any amount greater than 2.5 spent mercury vapor lamps and/or other mercury containing lamps such as fluorescent tube, high pressure halide lamps must be managed and disposed of as hazardous waste. (B) Determine if outlet for wastewater from crushing operation of low pressure sodium, Na, lamps is a storm drain or sewer outlet. If it is a storm drain, discontinue operation. Possibly relocate crushing operation where flow of wastewater can be directed into a sewer system. (C) Repair dumpster to provide more secure coverage from residual sodium in lamp reacting with water.
EPA ID Number		2	
Storage, 90 Days	3	4	
Storage, Containers	5	6	
Storage, Tanks	7	8	
Storage, Security	9	10	
Pre-Transportation Requirements		11

Local Permit		21	
UNDERGROUND TANKS			Note: Low pressure Na lamps provide for most of City of LB street lighting. Disposal is by crushing lamps in covered dumpster equipped with a H₂O spray system. This process makes Na unreactive. The pH of wastewater from exit point at dumpster is 11 + pH is 10 at about 7 feet away from dumpster.

OFFICIAL INSPECTION REPORT (continued)

Telephone: 427-7421

Date 11-26-90

1601 SAN FRANCISCO

① STREET LIGHTING — 4 crew member + Bill Andrews
Disposal is thin crushing with H₂O
to prevent igniting?

H₂O just runs through a down that's always
clogged
crushed
200 lamps/week

Ray Holland → Dir PW
Tom Commey — Mgr of PW yard San Francisco

Jack Sotelo → Industrial Converter Regional Prog Eng Mgr
PHILLIPS Light
(714) 447-5364 or
5367

High Pressure Halide — white light
High Pressure Na — pink orange light

11-30-90 10:30 am met w/ Bill Andrews

SIGNING FOR RECEIPT OF THE ABOVE NOTICE IS NOT AN ADMISSION OF THE FACTS OF THE VIOLATION(S) SET FORTH THEREIN.

NOTE TO FILE

REGARDING ADDRESS: _____

NOTE: _____

Discussion with Diane Peebler of Waste Evaluation Unit
CA-DOTS Alternative Technology Section

① Any info on ^{disposal} low pressure Na lamps? none as of now

② Available recycler in the bay area Quick Silver
(415) 468-2000 who does both fluorescent
bulbs & low pressure Na lamps

③ Interim regulation is 25 tubes/day of fluorescent
bulbs can be thrown in regular trash [Maybe
changed due to recent TCEP because of Hg content]

④ Suggested options:

(a) Return to supplier

(b) Use recycler

Told her that present technique is to crush lamps in
presence of H_2O (to prevent ignition in trash) & then throw
crushed material into trash.

If lamp is burned out — there's no more reactive Na +
possibly can be thrown in trash IF there's no other
hazardous ingredient

If lamp is not burned out — wetting w/ H_2O is to react
Na to make it unreactive but

DATE: 11-27-90 11:10 am

NOTE TO FILE

REGARDING ADDRESS: _____

NOTE: _____

Quick Silver reference: Bob Roberts (818) 303-2053
for southern CA generators.

per Bob Roberts: Low Pressure Na lamps — yellow burning
does not contain Hg + therefore can be crushed
w/ water to make Na unreactive (with proper
precaution)

High Pressure Na lamps → or any lamp
that is white light contains Hg

Call PHILLIPS Light

DATE: 12-6-90

NOTE TO FILE

REGARDING ADDRESS: 1725 SAN FRANCISCO

NOTE:

per. telecon with Gary Gravel - 508-2383

(1) Have contacted 5 consultants to the site
characterization on 12-3-90

(2) All 5 consultants will submit proposals
to them & then they will choose

(3) QUESTION: How long will it take to
evaluate proposals & choose one,
G Gravel said within 1-2 months

(4) REMINDER G Gravel that before anything
can be done with the site the application for
permit must be submitted to Health Dept
He said he's aware of this & the chosen
consultant will be asked to ~~prepare~~ complete
application for DPH because they don't have
anybody in house to do it.

CALL G. Gravel on 12-6-1991
if no correspondence is received
regarding application for permit

December 10, 19090

Tom Commeau
Manager, Public Service Bureau
Dept. of Public Works
1601 San Francisco
Long Beach, CA 90806

Dear Mr. Commeau:

The following are my findings during the routine inspections conducted at the Public Service (PS) yard, 1601 San Francisco address. Some are violations of the Health and Safety Code and others are problems that need to be resolved. This can be accomplished by a commitment on management to not only provide the leadership but also provide specific ways/solutions to supervisors of each section.

- that need to be corrected*
- A. Transporting of waste oil to Fleet Services facility at 2801 Willow by PS personnel is illegal since PS is not a registered hazardous waste hauler. (Health & Safety Code, HSC, Sec 208, 25150 and 25159)
 - ~~HA. Put into operation immediately the vacuum system installed a year ago at Bldg. 4415 for waste solvent generated by maintenance and repair of chain saw equipments.~~
 - B. Proper labeling of containers for hazardous wastes. The labels must indicate required information and must be clearly visible. (HSC Sec 208, 25159 and 25159.5)
 - C. Paint contaminated sawdust, oil contaminated absorbent materials/sand and mercury containing lamps must be disposed as hazardous wastes using a registered hazardous waste hauler. (HSC Sec 208, 25141 and 25150)
 - D. Material safety data sheets, MSDS, must be readily accessible to employees when they are in their work areas. (Hazardous Substances Information & Training Act 1980 Labor Code Sections 6360-6399.7)
 - E. Set up guidelines for the use and management of hazardous waste manifests generated by each section. (HSC Sec 208, 25159 and 25159.5 Reference standards Title 22 California Code of Regulations 66480 thru 66484)
 - F+J* *next job* **G.** Relocate "crushing operation" for low pressure sodium lamps used for street lighting to direct wastewater generated to a sewer system. Repair or replace current dumpster to provide safer condition and efficient de-activation of lamps.
 - H.** Repair solvent tank located at Storage Shed #4140 to properly manage solvent used in cleaning equipment parts.
 - I.** Put into operation immediately the vacuum system installed a year ago at Bldg. 4415 for waste solvent generated by maintenance and repair of chain saw equipments.

Here are some suggestions:

- 1. Look into having the registered hazardous waste hauler contracted for Fleet Service at 2801 Willow to pick-up waste oil at this PS yard. This might be an item that need to be considered for PS budget for the coming year.

every 90 days

2. Designate an area to consolidate hazardous waste streams generated at this yard. Determine what other waste streams and how much of each type is generated. This will provide information on how to manage hazardous wastes as far as:
- (a) decision of storage location/s within the yard and appropriate procedures to follow regarding storage
 - (b) time scheduling for disposal of each waste streams
 - (c) assignment of personnel

To date, waste streams that have been identified are:

Waste oil
Paint contaminated sawdust
Oil contaminated absorbent material/sand
Waste oil
Waste solvent
Used paint filters from spray booth
Mercury vapor lamps and other mercury containing light tubes/bulbs
Asbestos (structural section)

- insert
on
1st page* ←
- F. Prepare a contingency plan for the yard. (HSC Sec 208, 25159 and 25159.5)
 - J. Repair containment structure for waste paint related materials (near Bldg. 4150)

If you have any questions or if I can be of further assistance to you, please ~~ask~~ contact me at (213) 427-7421 ex 4127. All violations must be corrected immediately.

Respectfully submitted,

Cheryl S. Sandel
Hazardous Materials Specialist I

Public Service

per J. Simmons → to his knowledge PS personnel still take waste oil to Fleet Service @ Willow/Tangle

→ informed J. Simmons of City's liability & embarrassment if any of PS personnel transporting waste oil to Fleet Service get into accident; PS is not registered hazardous waste hauler

→ J. Simmons will check if

a) Fleet Service (FS) is a registered ^{hazardous} waste hauler & if YES, make arrangements to have Fleet Service pick up waste oil

b) If FS is not registered HWH, then have contractor (registered hazardous waste hauler) pick up waste oil at this facility

→ How much "solidified waste oil" generated per month
used to be done with sand but now using "Floor Dry"
EPA 1610-10-100

Date : September 6, 1995

Attention Mr. David McCarty.

**Subject : UNDERGROUND TANK TESTING AND CERTIFICATION AT
STREET MAINTENANCE, 1725 SAN FRANCISCO,
LONG BEACH, CA 90813.**

Dear Mr. McCarty,

In accordance with our agreement we arrived at the subject facility on 8/30/95 to test two underground tank systems, using the UST2000/P and PL-400 leak detector methods. A full system test was performed with the following results.

Tank #	Capacity / Gall.	Product Type	Underfilled Test / GPH	Ullage Test	Product line test / GPH
1	10,000	Diesel Fuel	Pass/ - 0.002307	Pass	Pass/ -0.007151
2	10,000	Reg. Unleaded	Pass/ + 0.001372	Pass	Pass/ -0.012712

The tanks and the lines were certified with test result within the State standard of -0.05 GPH. Because of almost infinite variables involved, this is intended to be a mathematical tolerance and is not the permission of the actual leakage. Based on the above criteria, we find the tank **mathematically TIGHT.**

Enclosed you will find copies of the relevant technical test printouts and worksheets. More detailed information will be promptly made available to you as soon as you will request it.

Our company values your business immensely and we hope you will call us again next year, when testing will become due.

Very truly yours

RECEIVED
SEP 18 1995
FIRE PREVENTION

Date: September 13, 1995

To: Thomas Hays, Inspector, Bureau of Fire Prevention

From: David McCarty, Administrative Supervisor

Subject: Underground Tank Testing, Public Works, 1725 San Francisco Avenue

Even though meetings are underway to reconstruct the San Francisco fuel site, the Fleet Services Bureau ordered the fuel tanks at this site tested for tightness to insure structural integrity. As you are well aware, the tanks at this facility are some of the oldest tanks owned by the City. With no assurance that construction of this site will begin this month integrity tests were ordered.

As the managing agency for the City's underground petroleum tank program, we were prepared to immediately close this site should the tanks have shown leakage.

The integrity tests were performed by a State licensed contractor on both 10,000 gal. fuel tanks and all product lines. The results were all positive and are enclosed for your records.

Fuel in these tanks will continue to be reconciled using the manual stick gauging method until construction of the site begins.

I would like to assure you we are committed to accomplishing every requirement established by your office.

Call if you have any questions. My number is x85410.

**RE: UST REMOVAL- PUBLIC SERVICE YARD, SITE NO. 43
1725 SAN FRANCISCO AVENUE, LONG BEACH, CALIFORNIA
McLAREN/HART PROJECT NO. 03.0603625.001**

Dear Ms. Sandel:

McLaren/Hart removed three tanks located at 1725 San Francisco Avenue (Project Number F268704) and collected nine soil samples under the direction of Long Beach Fire Inspector Wayne Swenson on January 21, 1999. Samples were collected utilizing a hand auger and drive sampler, placed in a thermally insulated cooler, and transported under proper chain-of-custody procedures to American Scientific Laboratories, a California Certified Laboratory in Los Angeles, California on January 21, 1999. Samples were analyzed for TPHg and TPHd using EPA Method 8015M and BTEX and MTBE using EPA Method 8020. Enclosed are copies of sample analysis results, chain-of-custody, and a plot plan identifying the locations of samples collected for the above referenced project.

If you have any comments or inquiries regarding this letter or attachments, please contact me at (949) 752-3202 or John Haney at (949) 752-3285.

Sincerely,

J.R. Morabito, P.E.
Principal Engineer

**RE: ADDITIONAL SAMPLING RESULTS: UST REMOVAL- PUBLIC SERVICE YARD,
SITE NO. 43, 1725 SAN FRANCISCO AVENUE, LONG BEACH, CALIFORNIA
(MCLAREN/HART PROJECT NO. 03.0603625.001)**

Dear Ms. Sandel:

This letter and attached soil sample results are being provided to supplement the data previously sent to you on January 26, 1999, regarding the removal of three tanks located at 1725 San Francisco Avenue (Project Number F268704). Based on our review of the initial soil sample analytical results (letter dated January 26, 1999), McLaren/Hart excavated additional soil in the vicinity of samples DT-W, DD-1, and UD-1 on January 27, 1999. Approximately 31 cubic yards of contaminated soil was removed from the west end of the diesel tank excavation (sample DT-W) to a depth of 18 feet below ground surface (bgs) and approximately 21 cubic yards of contaminated soil was removed from beneath the former dispenser island (samples DD-1 and UD-1) to a depth of 6 feet bgs.

Three soil samples were collected utilizing a hand auger and drive sampler, placed in a thermally insulated cooler, and transported under proper chain-of-custody procedures to American Scientific Laboratories, a California Certified Laboratory in Los Angeles, California on January 27, 1999. Sample DT-W.1 was collected near the west end of the diesel tank excavation at a depth of 18 feet bgs, sample DD-2 was collected from beneath the former location of the diesel dispenser at a depth of 6 feet bgs, and UD-2 was collected from beneath the former location of the unleaded dispenser at a depth of 6 feet bgs. Samples were analyzed for TPHg and TPHd using EPA Method 8015M and BTEX and MTBE using EPA Method 8020. Copies of soil sample analysis results, chain-of-custody form, and a plot plan identifying the locations of samples collected for the above referenced project are attached.

JOINT POWERS AGENCY
LONG BEACH/SIGNAL HILL

Unified Program Agency

2525 Grand Avenue • Long Beach, California 90815 • (562) 570-4131

March 25, 1999

Mr. David McCarthy
Public Service Yard
1725 San Francisco Avenue
Long Beach, California 90813

Re: 1725 San Francisco Avenue, Long Beach

Dear Mr. McCarthy:

This letter confirms the completion of the removal of two (2) 10,000 gallon, one (1) 1,000 gallon and one (1) 500 gallon underground storage tank(s) formerly located at the above described location.

Based on the information in the above referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, no further action related to the underground storage tank removal is required.

This notice is issued pursuant to a regulation contained in Section 2721(e) of Title 23 of the California Code of Regulations.

Please contact me at 562/570-4128 if you have any questions regarding this matter.

Sincerely,

Jeff Benedict, R.E.H.S., M.P.A.
Hazardous Waste Operations Officer

1.0 INTRODUCTION

McLaren/Hart has prepared this *Tank Closure Report* to document the removal of three underground storage tanks (USTs) from the City of Long Beach Public Service Yard, 1725 San Francisco Avenue, Long Beach, California. The location of the subject property is shown on Figure 1. This report has been prepared in accordance with the requirements of the City of Long Beach Fire Department (LBFD), Bureau of Fire Prevention, Closure Permit No. F0268704.

The tank closure consisted of the permitted removal of three USTs from two separate locations on the subject property. The first location (Area A) is situated approximately 135 feet south of Esther Street and 205 feet east of the western property line. The second location (Area B) is situated approximately 682 feet south of Esther Street and 10 feet east of the western property line. Two 10,000-gallon single-walled steel USTs were removed from Area A and one 1,000-gallon double-walled fiberglass-coated steel UST was removed from Area B. The former locations of the USTs are indicated on Figure 2.

The two 10,000 gallon USTs removed from Area A formerly contained unleaded and diesel fuel. The 10,000 gallon UST that contained diesel fuel was manufactured on November 5, 1959 (UL No. D875886) and the other 10,000 gallon UST (UL No. F185708) contained unleaded fuel and was manufactured in 1966. The 1,000 gallon UST (UL No. 27606) and associated leak detection system was located in Area B and was installed on July 19, 1988. According to the City of Long Beach records it was never used.

2.0 TANK REMOVAL ACTIVITIES

Tank closure activities were conducted in compliance with Tank Closure Permit No. F0268704 issued by the LBFD. The tank closure permit is included in Appendix A. Prior to any excavation activities, Underground Service Alert was notified to identify public utilities in the excavation areas. The South Coast Air Quality Management District (SCAQMD) was notified prior to initiating tank removal activities in accordance with the Foss Environmental and Infrastructure Rule 1166-Contaminated Soil Mitigation Plan.

McLaren/Hart initiated UST removal activities on January 19, 1999. The tasks associated with tank removal activities discussed in this section are listed below.

- ▶ Pre-Excavation Procedures
- ▶ Tank Excavation, Cleaning, and Removal
- ▶ Soil Sampling and Analysis
- ▶ Backfill and Compaction

2.1 PRE-EXCAVATION PROCEDURES

McLaren/Hart conducted a utility survey in Areas A and B to assess the presence or absence of underground utilities. The survey was conducted prior to initiating any excavation activity.

McLaren/Hart prepared a site-specific Health and Safety Plan (HASP), which detailed the proposed tank removal activities. This HASP incorporated the requirements specified by the Occupational Safety and Health Administration (OSHA) Hazardous Waste Operations Standard in the Code of Federal Regulations, Title 29, Section 1910.120 (29 CFR 1910.120). Safety meetings were held at the beginning of each workday, when new personnel were introduced to the site, and when changes in site conditions warranted such meetings. Potential workplace hazards and problems were identified and control measures were implemented as needed.

Field activities were conducted according to the procedures outlined in the HASP. Subcontractors were required to operate in accordance with the HASP.

2.2 TANK EXCAVATION, CLEANING, AND REMOVAL

The UST removals were initiated on January 19, 1999. Prior to excavating in Area A, the 10,000 gallon unleaded UST was degassed and both the unleaded and diesel USTs were rendered inert using a total of 250 pounds of dry ice (125 pounds per tank). Overburden soil was then removed and stockpiled adjacent to the excavation. During tank removal activities, the workplace was periodically monitored for organic vapors using a photo ionization detector (PID) and continuously monitored for explosion hazards using a lower explosion limit/oxygen (LEL/O₂) meter.

Visual observation of the overburden soil and fill material removed from the excavation in Area-A indicated that it was stained. The soil and fill material also had a petroleum hydrocarbon odor. An organic vapor monitor (OVM) was used to measure the concentration of volatile organic compounds (VOCs) emanating from the soil and fill material. VOCs were detected at concentrations ranging from 1 to 17 parts per million (ppm). The overburden soil and fill material was placed on and covered with visqueen.

Following the soil removal, the top of each tank was opened using a pneumatic rivet-buster. Visual observation of the interior of the USTs indicated that diesel and unleaded gasoline tank each contained approximately three inches of sludge and fuel. Following removal of the residual fuel and sludge, the tanks and associated piping in Area-A were rinsed with a high-pressure washer. A total of 1,500 gallons of fuel, sludge, and rinsate were pumped from the tanks in Area-A utilizing a vacuum truck and transported under Hazardous Waste Manifest to Crosby & Overton, a permitted treatment facility located in Long Beach, California on January 20, 1999. The Uniform Hazardous Waste Manifest for the waste liquid is presented in Appendix B.

In Area B, the Fire Inspector did not require the 1,000-gallon UST to be degassed. Visual observation of the overburden and fill material surrounding the UST in Area B indicated that the material was not stained and no hydrocarbon odors were observed. The overburden material and fill (pea gravel) were stockpiled adjacent to the tank excavation for reuse during backfill operations. The tank in Area-B was not pressure washed.

Wei Wu Yuan, a marine chemist with Thomas Beck & Associates, Inc., visually inspected and monitored the atmospheric conditions inside the USTs in Area A and Area B for volatile and/or explosive chemicals. Mr. Wu Yuan certified the tanks as "clean" and "safe for hot work". The Tank Certification Report is presented in Appendix C. The USTs and associated piping in Area-A were removed from the excavation on January 21, 1999 and transported off-site to Hugo Neu-Proler Company for destruction as scrap materials. The tanks were observed to be in good condition with no holes noted. The destruction certificate for the tanks and associated piping is presented in Appendix D. The tank from Area-B was removed from the excavation on January 21, 1999 and left on site for salvage by the City of Long Beach.

2.2.1 Site Lithology

During excavation activities, layers of silty clay, clayey silt, silty sand and fine sand were encountered beneath the surface. Although some variation existed, the following describes the general lithologic conditions encountered along the excavation sidewalls. Concrete and crushed base material existed below grade to the depth of approximately one-foot. A one-foot layer of fine sand was encountered below the crushed base, followed by silty clay to the depth of approximately 5.5 feet. From 5.5 to 7.5 feet fine sand existed, below which was clayey silt to the depth of 17 feet. At the depth of 17 feet, the lithology changed to silty sand. The majority of the excavation was dug to a depth of 12 feet. The west side was excavated to a total depth of 18 feet. Figure 3 shows a cross-section of the excavation and a boring log, which describes the lithology in further detail, is presented in Figure 4. The depth to groundwater for the site was obtained from the Los Angeles County Department of Public Health, Hydrologic Records Division. Records show that depth to groundwater in the vicinity is approximately 19.7 feet bgs. Depth to groundwater was measured in well number 381K, located at the intersection of Gaylord Street and Harbor Avenue, approximately 0.9 miles from the site, on October 22, 1998.

2.3 SOIL SAMPLING AND ANALYSIS

Per the requirements of the approved LBFD closure permit confirmation soil samples were collected from the excavation area. A total of nine confirmation soil samples were collected from Area-A on January 21, 1999 under the direction of Long Beach Fire Inspector Wayne Swenson. (Since the UST in Area-B was never used, Inspector Swenson did not require samples from Area-B.) Soil samples were collected from two feet below the east and west ends of each UST (UT-E, UT-W, DT-E, DT-W), two feet below the product line (DP-1), two feet below each dispenser (DD-1, UD-1) and two from the soil stockpile (SP-1, SP-2). The soil sample locations are presented on Figure 2.

Because the bottom of the excavation was approximately 12 feet below the ground surface, the samples were collected from the excavator bucket utilizing a drive sampler containing a brass sleeve. Each end of the brass sleeve was then covered with a Teflon sheet, capped, and placed in a thermally insulated cooler with ice. Sampling equipment was decontaminated between sample events by washing with Liquinox soap and rinsing with distilled water.

Samples were transported under appropriate chain-of-custody procedures to American Scientific Laboratories (ASL) in Los Angeles, California. The soil samples were analyzed for total petroleum hydrocarbons as gas and diesel (TPH_g and TPH_d) using DHS/LUFT Method 8015 Modified; and benzene, toluene, ethylbenzene, and xylenes (BTEX), and methyl-*tertiary* butyl ether (MtBE) using EPA Method 8020. A summary of soil analytical laboratory results for all six soil samples are presented in Table 1.

The analytical results indicated that TPH_g was detected at a concentration greater than the reporting limit in five of the nine samples (DT-W, DD-1, UD-1, SP-1, and SP-2 at concentrations of 43 mg/kg, 15 mg/kg, 12 mg/kg, 3.2 mg/kg, and 300 mg/kg, respectively). TPH_d was detected above the reporting limits in two of the nine samples (DD-1 and SP-2 at concentrations of 11,400 mg/kg, and 9,310 mg/kg, respectively). Benzene was detected above the reporting limit in three of the nine samples (DT-W, DD-1, and UD-1 at concentrations of 18 µg/kg, 62 µg/kg, and 61 µg/kg, respectively). Toluene was detected above the reporting limit in four of the nine samples (DT-W, DD-1, UD-1, and SP-2 at concentrations of 55 µg/kg, 50 µg/kg, 784 µg/kg, and 732 µg/kg, respectively). Ethylbenzene was detected above the reporting limit in six of the nine samples (DT-E, DT-W, DD-1, UD-1, SP-1, and SP-2 at concentrations of 90 µg/kg, 450 µg/kg, 50 µg/kg, 186 µg/kg, 9 µg/kg, and 311 µg/kg,

respectively). Xylene was detected above the reporting limit in six of the nine samples (DT-E, DT-W, DD-1, UD-1, SP-1, and SP-2 at concentrations of 70 µg/kg, 524 µg/kg, 280 µg/kg, 1,660 µg/kg, 38 µg/kg, and 9,300 µg/kg, respectively). M/BE was detected above the reporting limit in six of the nine samples (UT-W, DT-E, DT-W, UD-1, SP-1, and SP-2 at concentrations of 115 µg/kg, 40 µg/kg, 195 µg/kg, 16,100 µg/kg, 80 µg/kg, and 3,820 µg/kg, respectively). Analytical data sheets and chain-of-custody records for the samples are included as Appendix E.

2.4 ADDITIONAL EXCAVATION AND SAMPLING

Based on the initial soil sample analytical results, McLaren/Hart excavated additional soil in the vicinity of samples DT-W, DD-1, and UD-1 on January 27, 1999. Approximately 31 cubic yards of impacted soil were removed from the west end of the diesel tank excavation (the area surrounding sample DT-W) to a depth of 18 feet below ground surface (bgs). Approximately 21 cubic yards of impacted soil was removed from beneath the former dispenser island (the area surrounding samples DD-1 and UD-1) to a depth of 6 feet bgs.

Three confirmation soil samples, DT-W.1, DD-2, and UD-2 were collected from these additional excavations on January 27, 1999. Sample DT-W.1 originated from near the west end of the diesel tank excavation at a depth of 18 feet bgs. Sample DD-2 was collected from beneath the former location of the diesel dispenser at a depth of 6 feet bgs, and UD-2 was collected from beneath the former location of the unleaded dispenser at a depth of 6 feet bgs. Sample locations are presented on Figure 2.

Soil sample DT-W.1 was collected from the bucket of the excavator using a drive sampler containing a brass sleeve. Soil samples DD-2 and UD-2 were collected utilizing a drive sampler containing a brass sleeve directly from the bottom of the excavation. Each end of the brass sleeve was then covered with a Teflon sheet, capped, and placed in a thermally insulated cooler with ice. Sampling equipment was decontaminated between sample events by washing with Liquinox soap and rinsing with distilled water.

The samples were transported under appropriate chain-of-custody procedures to ASL in Los Angeles, California on January 27, 1999. The soil samples were analyzed for TPH_g and TPH_d using EPA Method 8015 Modified and for BTEX and M/BE using EPA Method 8020. Analytical laboratory results for the three soil samples are presented in Table 1. The analytical

results indicated that TPH_s, TPH_d, BTEX, and M_tBE were not detected above laboratory detection limits with the exception of DT-W.1, which had an M_tBE concentration of 32 µg/kg per EPA Method 8020. Analytical data sheets and chain-of-custody records for the samples are included as Appendix E.

2.5 TRANSPORTATION AND DISPOSAL OF CONTAMINATED SOIL

All of the soil removed from the Area-A tank excavation was transported off site for thermal treatment and recycling. Approximately 312 tons of petroleum contaminated soil was transported under Non-Hazardous Waste Manifest to Thermal Remediation Solution (TRS) located in Azusa, California on February 2, 1999. Copies of manifests and Weighmaster Certificates from TRS are included as Appendix F.

2.6 BACKFILL, COMPACTION, AND PAVING

Fill soil generated during the installation of two new USTs at the southern end of the facility was used to backfill the void remaining from removal of the USTs in Area-A. The excavation in Area-B was backfilled using the pea-gravel removed during the UST excavation, with import pea-gravel and base material used to make up for the tank void.

The excavation bottom in Area-A was prepared prior to backfill by rolling loose material with a sheep's foot mounted on an excavator. Following the initial compaction, Smith-Emery GeoServices, Inc. (Smith-Emery) inspected the excavation subgrade. Fill material was placed in the excavation in horizontal lifts approximately 12-inches thick and compacted to a minimum of 90 percent relative compaction using the sheep's foot. Smith-Emery continuously inspected and documented backfilling procedures.

The top 6-inches of the excavations in Area-A and Area B were backfilled using base material compacted to 95percent relative compaction. The compaction testing was performed by Smith-Emery and the Report of Compaction Testing is included in Appendix G. The excavations in Area-A and Area B were paved with 4-inches of asphalt on February 11, 1999.

3.0 CONCLUSIONS AND RECOMMENDATIONS

Visual observations made during removal of the tanks from Area A indicated that the USTs were intact with no sign of holes. Discolored or odorous soil removed during the UST excavation in Area A was transported off site for treatment. A total of nine confirmation soil samples were collected from Area-A on January 21, 1999 under the direction of LBFD. Based on the analytical results, some soil samples collected from Area A contained concentrations of TPH_d, benzene, and MtBE that exceeded the maximum soil screening levels for gravel within 20 feet of groundwater (May 1996, California Regional Water Quality Control Board's *Interim Site Assessment and Cleanup Guidebook*).

Subsequently, additional soil in the vicinity of samples DT-W, DD-1, and UD-1 was removed from the excavation in Area A on January 27, 1999. Three confirmation soil samples, DT-W.1, DD-2, and UD-2 were collected from these additional excavations on January 27, 1999. Final sampling results indicated that TPH_g, TPH_d, and BTEX were not present at concentrations exceeding the method detection limits. MtBE was detected in the soil beneath the tanks in samples DT-E, DT-W.1, and UT-W at concentrations of 40 µg/kg, 32 µg/kg, and 195 µg/kg, respectively.

Based on visual observations and the soil sample analytical results, submitted to the City of Long Beach Department of Human and Health Services on January 26, 1999 and February 1, 1999, a letter recommending no further action related to the UST removal was issued on March 25, 1999. A copy of this letter is included in Appendix H.

9622-3

TESTED: 0% LEL

SAFE FOR COLD WORK
AND TRANSPORTATION

In the event of any physical or atmospheric adversely affecting the STANDARD SAFETY DESIGNATIONS assigned to any of the above spaces, or if any doubt, immediately stop all work and contact the undersigned Marine Chemist.

QUALIFICATIONS: Transfer of ballast or manipulation of valves or closure equipment tending to alter conditions in pipe lines, tanks or compartments subject to gas accumulation, unless specifically approved in this Certificate, requires inspection and endorsement or reissue of Certificate for the spaces so effected. All lines, vents, heating coils, valves, and similarly enclosed appurtenances shall be considered "not safe" unless otherwise specifically designated.

STANDARD SAFETY DESIGNATIONS (partial list, paraphrased from NFPA 306 Subsections 2-3.1 through 2-3.5, and Subsection 6-3.2)

SAFE FOR WORKERS: Means that in the compartment of space so designated: (a) the oxygen content of the atmosphere is at least 19.5 percent by volume; and that, (b) toxic materials in the atmosphere are within permissible concentrations; and that, (c) the residues are not capable of producing toxic materials under existing atmospheric conditions while maintained as directed on the Marine Chemist's Certificate.

NOT SAFE FOR WORKERS: Means that in the compartment of space so designated, the requirements of Safe for Workers have not been met.

ENTER WITH RESTRICTIONS: Means that in any compartment or space so designated, entry for work may be made only if conditions of proper protective equipment, clothing, and time are specified.

SAFE FOR HOT WORK: Means that in any compartment designated: (a) oxygen content of the atmosphere is at least 19.5 percent by volume, with the exception of inerted spaces or where external hot work is to be performed; and that, (b) the concentration of flammable materials in the atmosphere is below 10 percent of the lower flammable limit; and that, (c) the residues are not capable of producing a higher concentration than permitted by (b) above under existing atmospheric conditions in the presence of fire, and while maintained as directed on the Marine Chemist's Certificate; and further, that, (d) all adjacent spaces containing or having contained flammable or combustible materials have been cleaned sufficiently to prevent the spread of fire, or are satisfactorily inerted, or, in the case of fuel tanks or lube oil tanks, or engine room or fire room bilges, have been treated in accordance with the Marine Chemist's requirements.

NOT SAFE FOR HOT WORK: Means that in the compartment so designated, the requirements of Safe for Hot Work have not been met.

CHEMIST'S ENDORSEMENT. This is to certify that I have personally determined that all spaces in the foregoing list are in accordance with NFPA 306 Control of Gas Hazards on Vessels and have found the condition of each to be in accordance with its assigned designation.

* undersigned acknowledges receipt of this Certificate under Section 2-6 of NFPA 306 and understands conditions and limitations under which it was issued.

This Certificate is based on conditions existing at the time the inspection herein set forth was completed and is issued subject to compliance with all qualifications and instructions.

RE: DISPOSAL AND SCRAPING OF TANKS

Received on January 21, 1999 two 10,000 gallon fuel tanks marked 9622-1 and 9622-2 from 1601 San Francisco St. City of Long Beach, accompanied with a certificate from Harbor Testing Laboratory, certifying safe for hot work by marine chemist (ID# 9622). These tanks were destroyed & prepared for remelting purposes only.

Attn: John White

RE: City Yard
Long Beach, California

SUBJECT: COMPACTION TESTING

REPORT OF TESTS

In compliance with your request, Smith-Emery GeoServices has conducted standard compaction testing for the above referenced project.

Field density tests to determine relative compaction were conducted in accordance with ASTM D2922-91, nuclear method.

Test locations and results are presented on the attached Table 1. Laboratory compaction characteristics of soil tests were performed on representative samples in accordance with ASTM D1557-91, five layer method. Test results are presented on the attached Table 2.

Respectfully submitted,

SMITH-EMERY GEOSERVICES

Robert Greeley
ROBERT H. GREELEY
Supervisor, GeoServices

No Further Action Letter

**JOINT POWERS AGENCY
LONG BEACH/SIGNAL HILL**

Unified Program Agency

2525 Grand Avenue • Long Beach, California 90815 • (562) 570-4131

March 25, 1999

Mr. David McCarthy
Public Service Yard
1725 San Francisco Avenue
Long Beach, California 90813

Re: 1725 San Francisco Avenue, Long Beach

Dear Mr. McCarthy:

This letter confirms the completion of the removal of two (2) 10,000 gallon, one (1) 1,000 gallon and one (1) 500 gallon underground storage tank(s) formerly located at the above described location.

Based on the information in the above referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, no further action related to the underground storage tank removal is required.

This notice is issued pursuant to a regulation contained in Section 2721(e) of Title 23 of the California Code of Regulations.

Please contact me at 562/570-4128 if you have any questions regarding this matter.

Sincerely,

Jeff Benedict, R.E.H.S., M.P.A.
Hazardous Waste Operations Officer

**RE: ADDITIONAL SAMPLING RESULTS: UST REMOVAL- PUBLIC SERVICE YARD,
SITE NO. 43, 1725 SAN FRANCISCO AVENUE, LONG BEACH, CALIFORNIA
(McLAREN/HART PROJECT NO. 03.0603625.001)**

Dear Ms. Sandel:

This letter and attached soil sample results are being provided to supplement the data previously sent to you on January 26, 1999, regarding the removal of three tanks located at 1725 San Francisco Avenue (Project Number F268704). Based on our review of the initial soil sample analytical results (letter dated January 26, 1999), McLaren/Hart excavated additional soil in the vicinity of samples DT-W, DD-1, and UD-1 on January 27, 1999. Approximately 31 cubic yards of contaminated soil was removed from the west end of the diesel tank excavation (sample DT-W) to a depth of 18 feet below ground surface (bgs) and approximately 21 cubic yards of contaminated soil was removed from beneath the former dispenser island (samples DD-1 and UD-1) to a depth of 6 feet bgs.

Three soil samples were collected utilizing a hand auger and drive sampler, placed in a thermally insulated cooler, and transported under proper chain-of-custody procedures to American Scientific Laboratories, a California Certified Laboratory in Los Angeles, California on January 27, 1999. Sample DT-W.1 was collected near the west end of the diesel tank excavation at a depth of 18 feet bgs, sample DD-2 was collected from beneath the former location of the diesel dispenser at a depth of 6 feet bgs, and UD-2 was collected from beneath the former location of the unleaded dispenser at a depth of 6 feet bgs. Samples were analyzed for TPHg and TPHd using EPA Method 8015M and BTEX and MTBE using EPA Method 8020. Copies of soil sample analysis results, chain-of-custody form, and a plot plan identifying the locations of samples collected for the above referenced project are attached.

McLAREN/HART PROJECT NO. 03.0603625.001**

Dear Ms. Sandel:

McLaren/Hart removed three tanks located at 1725 San Francisco Avenue (Project Number F268704) and collected nine soil samples under the direction of Long Beach Fire Inspector Wayne Swenson on January 21, 1999. Samples were collected utilizing a hand auger and drive sampler, placed in a thermally insulated cooler, and transported under proper chain-of-custody procedures to American Scientific Laboratories, a California Certified Laboratory in Los Angeles, California on January 21, 1999. Samples were analyzed for TPHg and TPHd using EPA Method 8015M and BTEX and MTBE using EPA Method 8020. Enclosed are copies of sample analysis results, chain-of-custody, and a plot plan identifying the locations of samples collected for the above referenced project.

Re: 1725 San Francisco Avenue, Long Beach

Dear Mr. McCarthy:

This letter confirms the completion of the removal of two (2) 10,000 gallon, one (1) 1,000 gallon and one (1) 500 gallon underground storage tank(s) formerly located at the above described location.

Based on the information in the above referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, no further action related to the underground storage tank removal is required.

This notice is issued pursuant to a regulation contained in Section 2721(e) of Title 23 of the California Code of Regulations.

Please contact me at 562/570-4128 if you have any questions regarding this matter.

Sincerely,

Jeff Benedict, R.E.H.S., M.P.A.

BOX 517 FONTANA CALIF. 92334 PHONE 714-823-7229CONTRACTORS LIC # 465796 CLASS 4This application and permit is for the removal ☒ abandonment _____ of tank(s) identified on this form, and shall only be valid and in force for a maximum of ten (10) working days from date of application.

Permittee or his authorized agent shall notify the Hazardous Materials Unit, Long Beach Health Department, Phone No. (213) 427-7421 and Bureau of Fire Prevention, Long Beach Fire Department, Phone No. (213) 435-2458 a minimum of 72 hours prior to the removal or filling of any tank(s). An official from each of these two departments shall be present at the job site to witness the removal or filling of any and all tanks. All directions made/given by these City officials shall be complied within a timely and reasonable fashion.

When any underground storage tank(s) is/are removed from the ground, the resulting excavated site shall be secured in an approved manner until filled. Any excavation shall be temporarily backfilled or enclosed by a fence with a minimum height of six (6) feet. If the foregoing security measures are not feasible, a security guard shall be provided, until the completion of the permit, by the permittee and at the expense of the permittee. The structural integrity of the tank(s) shall be maintained during removal and transport. Tank(s) removed from the ground are not permitted to remain at the site or within the City limits overnight. No temporary or permanent storage of any used hazardous or flammable liquids/materials storage tank(s) is/are permitted within the City limits of Long Beach.

The removal or filling of any tank(s) shall be in accordance with Long Beach Municipal Code, Title 18.48; California State Health and Safety Code, Division 20, Chapter 6.5; the Uniform Fire Code, Articles 79 and 80; and LBFD Fire Prevention Requirements, the 14 series.

I, THE UNDERSIGNED, HAVE READ COMPLETELY AND FULLY UNDERSTAND THE ABOVE LONG BEACH FIRE DEPARTMENT REQUIREMENTS WHICH APPLY TO THIS APPLICATION AND PERMIT. I, THE UNDERSIGNED, ATTEST TO THE BEST OF MY KNOWLEDGE, UNDER THE PENALTY OF PERJURY, THAT THE ABOVE PROVIDED INFORMATION IS TRUE AND CORRECT. I, THE UNDERSIGNED, ACCEPT THE CONDITION THAT ANY DEVIATION(S) FROM AND/OR MISINFORMATION ON THIS FORM WILL RENDER THIS APPLICATION AND PERMIT NULL AND VOID.

I VICTOR S. CHEN of
Contractor or Assigned Agent
MARINE CONTRACTOR.
Contracting Company

State Contractor's Lic.# 469796 Type: CLASS "A"

Expiration Date: _____

Have been assigned to obtain necessary permits and regulations for the
Removal of Underground Tank(s) located at 1725 San Francisco Long Beach
Address of Site

I have received copies of Long Beach Fire Prevention Requirement #14.103(12/87) and Long Beach Health Department Soil/Groundwater Laboratory Analysis Requirement, and Long Beach Health Department Laboratory Quality Control Report.

I also understand that I must have an APPROVED COPY of the "Application and Permit to Remove or Abandon Storage Tank(s) PRIOR to removing tank.

Permittee or his authorized agent shall notify the Underground Storage Unit, Bureau of Fire Prevention, Phone (213) 435-2458 a minimum of 72 hours prior to the start of any work for the removal of a tank, for an appointment to have a Fire Prevention Inspector on site.

NOTE: ABSOLUTELY NO COMMENCEMENT OF WORK ON SITE UNTIL TANKS HAVE BEEN "ICED" IN THE PRESENCE OF A L.B.F.D. INSPECTOR.

It will be necessary to obtain appropriate samples from underneath tank(s) immediately upon removal of tank. Contact Mr. Dick Smith, Hazardous Waste Officer, Long Beach Health Department, Phone (213) 427-7421 if you have any questions.

I certify that I have read and understand the preceding information, and have received the requirements mentioned above. This information will be given to actual persons performing tank removal PRIOR to start of work, and a copy of each requirement/permit/report must be on the job site.

NOTE: As per Long Beach Fire Department Fee Schedule PC-12, if the above requirements are not met when the Fire Prevention Officer arrives on the scene for the tank removal, you will be required to reschedule the appointment and pay a \$100.00 reinspection fee.

MEMORANDUM

DATE August 10, 1988

FROM Lawrence J. Chrystal

TO Marine Contractors
P.O. Box 517
Fontana, CA 92334

RE Long Beach City Yard
Soil Analyses

The soil samples brought to our laboratories on July 7, 1988 were analyzed for Total Petroleum Hydrocarbons using EPA Method 418.1 (modified for soils) with the following results:

City Yard #1 2901 Willow St. 2ft South End 110,000 ug/g
City Yard #2 2901 Willow St. 2ft North End 17,000 ug/g
City Yard 1725 San Francisco 16,000 ug/g

These samples were re-analyzed on a separate day in order to confirm the original results. The rechecks did confirm. All the calculations were double-checked. There were no transcription errors. Therefore, we have NO changes to make in the original reporting of the results.

Lawrence J. Chrystal

cc: Long Beach Health Dept. Attn: Dick Smith

MEMORANDUM

date August 30, 1988
to Richard E. Smith, Hazardous Waste Officer
from Edward T. Putz, Acting City Engineer *EP*
subject LEAKING TANK/SITE CHARACTERIZATION - 1725 SAN FRANCISCO AVENUE

This is in response to your request to submit an application for a Site Characterization Permit and initiate a site characterization report for the subject site.

It is our understanding that the total San Francisco Avenue site is currently under investigation for further redevelopment. Unless further directed by your Department we will wait until a final decision has been made to make a site assessment on the complete parcel.

WJP/ARA/ch
26.11

MEMORANDUM

date October 24, 1988

to Ed Putz, Acting City Engineer

from Richard E. Smith, Hazardous Waste Operations Officer

subject CONTAMINATED SITE/SITE CHARACTERIZATION: 1725 SAN FRANCISCO

The Long Beach City Health Department has received the result of the soil analysis indicating that a discharge of a hazardous waste has occurred at the above referenced location.

In order to comply with the State of California Hazardous Waste Control Act and the Long Beach City Ordinance for Hazardous Materials Cleanup, it is required that you submit an application for a Site Characterization Permit and an Initial Site Characterization Report.

The purpose of the Site Characterization includes:

1. Identifying the discharged waste.
2. Defining the horizontal and vertical extent of the contamination.
3. Determining if the groundwater or surface waters have been impaired.
4. The report must be signed by a California Registered Geologist or a California Certified Engineering Geologist, or a California Registered Civil Engineer with sufficient experience in soils.

A minimum of three borings, taken below or next to the underground tank or the area previously occupied by the underground tank, shall be used for soil sampling to check for lateral as well as vertical movement of contaminants in the soil. Additional borings may be necessary in some cases. The borings shall extend through the entire depth of contaminated soil. All abandoned boreholes shall be sealed with appropriate grout formulations.

Soil samples should be taken from the borings at consistent intervals of five feet to develop a complete profile of the soil contamination. If a dissimilar layer of soil is found to exist entirely between the five feet sampling intervals, a sample from this layer shall be taken and analyzed.

October 24, 1988
Ed Putz, Acting City Engineer
Page Two

When ground water is shallow enough to be reached using available equipment (i.e., less than 30 feet), it is appropriate to install ground water (monitoring) wells.

I have enclosed a permit application, application information and a copy of the Site Characterization/Site Remediation Ordinance. There is no permit fee, however, you will be billed by the City of Long Beach at a rate of \$42.00 per hour for Health Department Personnel time involved with this project until the cleanup has been completed.

The permit application process is to be completed by November 21, 1988.

After a site has been characterized the next phase is site remediation or cleanup. A permit will be required for this also.

You should also be aware of the South Coast Air Quality Management District's Rule 1166, regarding volatile organic compound (VOC) emissions from contaminated soil. If you are going to treat or handle VOC - contaminated soil, you must notify the South Coast Air Quality Management District Executive Officer by telephone within 24 hours of detection of the VOC - contaminated soil and comply with their requirements.

If any further information is required, please contact Suzanne Gandy at (213) 427-7421, Environmental Health between the hours of 8 a.m. and 9:00 a.m. or 4:00 p.m. and 5:00 p.m.

MEMORANDUM

date November 29, 1988
to Richard E. Smith, Hazardous Waste Officer
from Edward T. Putz, Acting City Engineer *ef*
subject LEAKING TANK/SITE CHARACTERIZATION - 1725 SAN FRANCISCO AVENUE

This is in response to your request to submit an application for a Site Characterization Permit and initiate a site characterization report for the subject site.

Please be advised that the subject fuel tank is in the close proximity of two other tanks which are scheduled to be replaced in the very near future (See attached aerial photograph). It is our understanding that the site characterization shall be initiated on the complete parcel after the other two tanks are removed.

WJP/ARA/ch

MEMORANDUM

date December 12, 1988
to Edward T. Putz, Acting City Engineer
from  Dick Smith, Hazardous Waste Operations Officer
subject LEAKING UNDERGROUND STORAGE TANK SITE CHARACTERIZATION
1725 SAN FRANCISCO AVENUE, LONG BEACH

I have received your memorandum regarding the above referenced subject stating that Site Characterization will be initiated when the remaining two(2) tanks are removed.

This is acceptable to this department, therefore we will consider the matter pending until the removal of the two(2) tanks.

RS/da

M. MORANDUM

date November 9, 1990
to Ed Putz, City Engineer, Department of Public Works
from Richard E. Smith, Hazardous Waste Operations Officer, Department of Health and Human Services -
subject **1725 SAN FRANCISCO AVENUE**

A review of the Long Beach City Department of Health and Human Services Leaking Underground Storage Tank file for the above referenced facility reveals that there has been no assessment or remedial activity since November 29, 1988.

In order to keep our file up to date, would you contact the individual designated in the last paragraph of this letter and inform her of your intentions to complete the required work.

Please contact Cheryl Sandel, Hazardous Materials Specialist I by December 5, 1990, at (213) 427-7421, any weekday between the hours of 8:00 a.m. to 9:00 a.m. or 4:00 p.m. to 5:00 p.m.

RS/da

March 25, 1999

Mr. David McCarthy
Public Service Yard
1725 San Francisco Avenue
Long Beach, California 90813

Re: 1725 San Francisco Avenue, Long Beach

Dear Mr. McCarthy:

This letter confirms the completion of the removal of two (2) 10,000 gallon, one (1) 1,000 gallon and one (1) 500 gallon underground storage tank(s) formerly located at the above described location.

Based on the information in the above referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, no further action related to the underground storage tank removal is required.

This notice is issued pursuant to a regulation contained in Section 2721(e) of Title 23 of the California Code of Regulations.

Please contact me at 562/570-4128 if you have any questions regarding this matter.

Sincerely,

Jeff Benedict, R.E.H.S., M.P.A.
Hazardous Waste Operations Officer

Date: September 1, 1995

To: Richard E. Smith, Hazardous Waste Operation Officer,
Department of Health and Human Services

From: David McCarty, Administrative Supervisor, Fleet Services Bureau

Subject: Fire Station #7, Towing Yard and Heliport Tank Removals

The Fire Department issued a permit and scheduled the removal of underground tanks and dispensing systems at Fire Station #7, Towing Operations and the Heliport. The permits were issued to Maness Environmental, a Long Beach company with a good working relationship with the Fire department.

The removals were performed on Wednesday August 30, 1995 with all the necessary soil samples taken by an approved lab. The results of the lab tests were faxed to the Fleet Services Bureau and sent to the Health Department for review.

I have enclosed copies of the results in order to bring this matter to your attention as soon as possible. The Fleet Services Bureau would like authorization to dig out the contamination at Fire Station #7 and at the Towing Operations Yard and proceed with reconstructing the sites. These sites are currently active and support vital services to the public.

We would like to proceed with this cleanup as soon as possible in order to restore operations at these facilities.

Thank you for your time and attention regarding this request, your positive response is greatly appreciated.

To reach me by phone dial extension 8-5410, to fax me your comments dial extension 8-5414.

Date: October 18, 1995
To: David McCarty, Administrative Supervisor, Fleet Services Bureau
From: *RS* Richard E. Smith, Hazardous Waste Operations Officer, Department of Health and Human Services
Subject: **901 WEST ANAHEIM STREET, LONG BEACH**

The Long Beach Department of Health and Human Services has received a tank closure indicating that a discharge of a hazardous material has occurred at the above referenced location.

In order to comply with the State of California Hazardous Waste Control Act and the Long Beach City Ordinance for Hazardous Materials cleanup, it is required that you submit an application for a Site California Permit and an Initial Site Characterization Report.

I have enclosed a permit application, a copy of the Site Characterization Ordinance. There is no permit fee.

The permit application process is to be completed by November 13, 1995.

After a site has been characterized the next phase is site remediation or cleanup. A permit will be required for this also.

You should also be aware of the South Coast Air Quality Management District's Rule 1166, regarding volatile organic compound (VOC) emissions from contaminated soil. If you are going to treat or handle VOC - contaminated soil, you must notify the South Coast Air Quality Management District Executive Officer by telephone within 24 hours of detection of the VOC-contaminated soil and comply with their requirements.

If any further information is required, please contact Carmen Piro, at 310/570-4137, Environmental Health between the hours of 8:00 a.m. and 9:00 a.m. or 4:00 p.m. to 5:00 p.m.

RE: UNDERGROUND STORAGE TANK CLOSURE REPORT

Dear Ms. Piro:

Maness Environmental Services, Inc. (Maness) is pleased to submit this report for the closure of one 550-gallon gasoline steel underground storage tank (UST) at City of Long Beach Towing.

The work completed consisted of: (1) excavation, removal and disposal of one gasoline UST and associated piping, (2) collection and analysis of soil samples beneath the former UST and the soil stockpile, and (3) a final UST closure report, summarizing the results of all field activities and analytical testing.

Results of laboratory testing indicate that petroleum hydrocarbon affected soil is present in the vicinity of former gasoline UST. Total petroleum hydrocarbons with gasoline distinction and benzene concentrations of 7,500 and 22 parts per million, respectively, were detected in the soil sample collected beneath the former gasoline UST.

If you have any questions regarding the report or require additional information, please call me at (310) 595-4555.

Sincerely,

Maness Environmental Services, Inc.

Scott Hultner

1.0 INTRODUCTION

This report summarizes excavation and soil sampling activities conducted in conjunction with a 550-gallon gasoline steel underground storage tank (UST) and associated product line removal recently completed at City of Long Beach Towing located at 901 W. Anaheim Street in Long Beach, California (Figure 1).

1.1 PURPOSE AND SCOPE OF WORK

The work completed consisted of the removal of one 550-gallon gasoline steel UST and associated piping. In addition, Maness personnel collected soil samples following the UST removal, beneath the former UST and from the soil stockpile, to determine whether contents previously stored in the UST have impacted the surrounding subsurface soil.

2.0 FIELD ACTIVITIES

2.1 TANK REMOVAL OPERATIONS

On August 30, 1995, Maness cleaned and triple rinsed the UST at the subject site. The UST was pressure rinsed sufficiently until satisfactory lower explosive limits (LEL) and total oxygen content levels were achieved. In addition, the gasoline UST was properly degassed.

In compliance with the South Coast Air Quality Management District (SCAQMD) Rule 1166 permit issued to Maness (Application Number 257250 and Identification Number 69389), organic vapors were monitored during excavation activities

On August 30, 1995, a Bacharach (TLV-RM) meter was used to monitor organic vapors emitted from soil during excavation in the vicinity of the UST. The SCAQMD Rule 1166 monitoring records are included in Appendix A.

Under the direction of Inspector Thomas Hayes of the Long Beach Fire Department (LBFD), Maness removed the gasoline UST from the excavation and transported it to the Wilmington Salvage Inc. facility located in Wilmington, California. Several small holes were observed along the gasoline UST. Refer to Appendix B for a copy of the tank disposal certificate.

2.2 SOIL SAMPLING

On August 30, 1995, Soil Sample 1C-8 was collected beneath the gasoline UST at approximately 8 feet below grade (fbg) and Soil Sample SP-1 was collected from the soil stockpile generated during UST removal activities. Soil sampling activities were conducted under the supervision of inspector Thomas Hayes of the LBFD.

The soil samples were packaged in 250 milliliter Qorpak glass jars, sealed with Teflon lined plastic lids, labeled, and immediately placed on ice in a cooler. The samples were delivered immediately to a state certified, analytical laboratory for testing. Refer to Appendix C for copies of the official laboratory and quality assurance/quality control (QA/QC) reports, and chain of custody records.

2.3 UST RINSATE AND SOIL DISPOSAL

On August 30, 1995, approximately 150 gallons of UST rinsate was transported by vacuum truck to Crosby and Overton facility located in Long Beach, California. Refer to Appendix D for a copy of the uniform hazardous waste manifest. The non-hazardous soils manifest will be forwarded under a separate cover upon receipt.

3.0 SITE GEOLOGY AND HYDROGEOLOGY

The site is located on the north flank of Long Beach. According to California Department of Water Resources, Bulletin No. 104, Planned Utilization of the Groundwater Basins of the Coastal Plain of Los Angeles County, June 1961, reprinted May 1990, the site is underlain by the following stratigraphic units:

Terrace Cover - Reddish brown sand, non-fossiliferous and largely continental composed of terrigenous clastic material.

Palos Verde Sand - Sand, pebble and gravel, fossiliferous and marine, moderately permeable above the local water table, crops out along southern slopes of Signal Hill.

Unnamed Deposits - Silt, sand and gravel, moderately to slightly permeable above groundwater table.

According to the Los Angeles Department of Public Works, the nearest groundwater well (392H) is located approximately half a mile south of the site. ~~The depth to groundwater on October 7, 1994, was 14.9 fbg and the ground surface elevation was 44.7 feet above mean sea level.~~ Groundwater was encountered at approximately 6 to 8 fbg during the excavation activities conducted at the site.

4.0 LABORATORY TESTING

4.1 METHODS OF ANALYSIS

Laboratory samples were collected, maintained, prepared and analyzed according to Test Methods for Evaluating Solid Waste, (SW-846), Third Edition, Update #2, November 1990. These methods, as prescribed by the Environmental Protection Agency (EPA), provide test procedures which determine whether a sample is a hazardous waste within the definition of the Resource Conservation Recovery Act (RCRA).

A state certified, analytical laboratory (Fullerton Environmental Laboratory of Fullerton, California) analyzed soil samples collected beneath the former UST and the soil stockpile. The soil samples were analyzed for total petroleum hydrocarbons as gasoline (TPH-G); benzene, toluene, ethylbenzene, and total xylenes (BTEX) using Modified EPA Method 8015 and EPA Method 8020, respectively. In addition, carbon chains were identified in soil samples using Modified EPA Method 8015. Refer to Figure 2 and Tables 1 and 2 for laboratory results.

TABLE 1

Summary of Laboratory Results

City of Long Beach Towing
Sample Date = August 30, 1995

Sample ID	Depth (ft bg)	TPH-G (ppm)	Benzene (ppm)	Toluene (ppm)	Ethylbenzene (ppm)	Total Xylenes (ppm)
1C-8	8	7,500*	22	17	98	470
SP-1	—	ND	ND	ND	ND	0.013
MDL	—	1.0	0.005	0.005	0.005	0.005

Note: TPH-G = total petroleum hydrocarbons as gasoline
 ppm = parts per million (mg/kg)
 ND = not detected at or above detection limit stated in official laboratory reports
 * = minimum detection limit is 2,500 ppm
 — = not applicable
 MDL = minimum detection limit stated in official laboratory reports

4.2 RESULTS OF ANALYSIS

TPH-G and benzene concentrations of 7,500 and 22 parts per million (ppm), respectively, were detected in soil samples collected beneath the former gasoline UST. A total xylene concentration of 0.013 ppm was detected in the soil stockpile sample (TPH-G, benzene, toluene, or ethylbenzene was not detected). Carbon chains were detected in both soil samples (maximum of 1,100 ppm [C10-C11] in Soil Sample 1C-8).

TABLE 2

Summary of Laboratory Results

City of Long Beach Towing
Sample Date = August 30, 1995

tes: ppm = parts per million (mg/kg)
 ND = not detected at or above detection limits stated in official laboratory reports
 — = not applicable
 MDL = minimum detection limit stated in official laboratory reports

5.0 CONCLUSIONS

Maness performed UST closure operations at City of Long Beach Towing facility located at 901 W. Anaheim Street in Long Beach, California. The work completed consisted of the removal of one 550-gallon gasoline steel UST. The soil sample beneath the former gasoline UST was collected under the supervision of Inspector Thomas Hayes of the Long Beach Fire Department.

The laboratory results of the soil sample collected beneath the former UST indicate that petroleum hydrocarbon-affected soil is present in the vicinity of the gasoline UST.

Based on the results and findings of this tank closure report, Maness recommends the lateral and vertical extent of hydrocarbon-affected soil be delineated before remedial options are assessed.

6.0 LIMITATIONS

Maness Environmental Services, Inc. performs professional services using that degree of care and skill ordinarily exercised by environmental consultants practicing in this or similar localities. The findings are based primarily upon analytical results provided by an independent laboratory. Interpretations of the subsurface conditions at the site, for the purpose of this investigation, are made from a limited number of available data points (example: soil samples) and subsurface conditions may be different in other locations.

Maness appreciates the opportunity to provide environmental management services for the City of Long Beach. If you have any questions regarding the report or require additional information, please call us at (310) 595-4555.

Sincerely,

Maness Environmental Services, Inc.

In the event of any physical or atmospheric changes adversely affecting the STANDARD SAFETY DESIGNATIONS assigned to any of the above spaces, or if in any doubt, immediately stop all work and contact the undersigned Marine Chemist.

QUALIFICATIONS: Transfer of ballast or manipulation of valves or closure equipment tending to alter conditions in pipe lines, tanks or compartments subject to gas accumulation, unless specifically approved in this Certificate, requires inspection and endorsement or release of Certificate for the spaces so affected. All lines, vents, piping, valves, and similarly enclosed appurtenances shall be considered "not safe" unless otherwise specifically designated.

STANDARD SAFETY DESIGNATIONS (partial list, paraphrased from NFPA 306 Subsections 2-3.1 through 2-3.5, and Subsection 6-3.2)

SAFE FOR WORKERS: Means that in the compartment or space so designated: (a) the oxygen content of the atmosphere is at least 19.5 percent by volume; and that, (b) toxic materials in the atmosphere are within permissible concentrations; and that, (c) the residues are not capable of producing toxic materials under existing atmospheric conditions while maintained as directed on the Marine Chemist's Certificate.

NOT SAFE FOR WORKERS: Means that in the compartment or space so designated, the requirements of Safe for Workers have not been met.

ENTER WITH RESTRICTIONS: Means that in any compartment or space so designated, entry for work may be made only if conditions of proper protective equipment, clothing, and time are as specified.

SAFE FOR HOT WORK: Means that in the compartment so designated: (a) oxygen content of the atmosphere is at least 19.5 percent by volume, with the exception of inert spaces where external hot work is to be performed; and that, (b) the concentration of flammable materials in the atmosphere is below 10 percent of the lower flammable limit; and that, (c) residues are not capable of producing a higher concentration than permitted by (b) above under existing atmospheric conditions in the presence of fire, and while maintained in accordance with the Marine Chemist's Certificate; and further, that, (d) all adjacent spaces containing or having contained flammable or combustible materials have been cleaned in accordance with the Marine Chemist's requirements.

NOT SAFE FOR HOT WORK: Means that in the compartment so designated, the requirements of Safe for Hot Work have not been met.

CHEMIST'S ENDORSEMENT. This is to certify that I have personally determined that all spaces in the foregoing list are in accordance with NFPA 306 Control of Gas Hazards in Vessels and have found the condition of each to be in accordance with its assigned designation.

undersigned acknowledges receipt of this Certificate and Section 2-6 of NFPA 306 and the conditions and limitations under which it was issued.

This Certificate is based on conditions existing at the time the inspection herein set forth was completed and issued subject to compliance with all qualifications and instructions.

Site Information

Long Beach City Tow Yard, located at 901 West Anaheim Street, in Long Beach, California had one 550-gallon underground storage tank removed on August 30, 1995. The tank was pitted with holes. When the tank was removed, soil samples were taken underneath the tank and from the excavated soil pile and analyzed. According to an analytical report dated August 31, 1995, prepared by Fullerton Environmental Laboratory, the soil underneath the tank contained elevated levels of total petroleum hydrocarbons as gasoline and BTEX. Because of these elevated levels, further assessment is required to determine the extent of the elevated levels of gasoline and BTEX.

The City Towing Yard is owned by the City of Long Beach and is maintained by the Fleet Services Bureau, 2801 East Willow Street, Long Beach, CA 90806. The Fleet Services Supervisor for this site is David McCarty, (310) 570-5410. A plot plan of the facility may be found in the Appendix.

EPICS International has been retained by the City of Long Beach to perform a characterization of the site in order 1) to determine the vertical and horizontal extent of contamination at the site; 2) to determine the concentration and type of contamination involved; and 3) to determine if groundwater has been impaired. This work plan serves as the Initial Assessment Report and defines the proposed work to be performed at the site.

All work to be performed by EPICS International will be done in accordance with all applicable local, state, and federal laws and regulations.

Prior to beginning work onsite, EPICS will provide notifications to the City of Long Beach Department of Health and Human Services and the South Coast AQMD as applicable. Underground Services Alert will be notified to mark subsurface utilities in the expected drilling areas.

Environmental Setting

Site Geology

Regionally, the site is within the southwestern portion of the Coastal Plain of Los Angeles County, which is bounded by the Santa Monica Mountains on the north, the Elysian, Repetto, Merced, and Puente Hills on the northeast, and the Pacific Ocean on the south and west. The City of Long Beach is located near the southern boundary of the plain. Therefore, the tectonic setting, structure and stratigraphy here parallel that of the plain as a whole. The most visible geologic structure in the city is the Newport-Inglewood structural zone, which runs from Beverly Hills southeast to Newport Beach. Its major surface features include the Baldwin Hills, Dominguez Hills, and Signal Hill. This zone divides the city diagonally and separates the basin's primary southwestern and central structural blocks. This zone has been recognized as an effective, near-surface groundwater barrier (Randell, p. 21).

Surficial deposits in the area of the site are believed to be from the Terrace Cover structure, comprising reddish-brown sand, nonfossiliferous and probably largely continental. The stratigraphy below this is Palos Verdes Sand, comprising sand and some pebble gravel, fossiliferous and marine, which crops out locally at edges of mesas, followed by unnamed deposits of silt, sand, and gravel, which are inferred to crop out only locally at edges of mesas. Local unconformity separates this structure from the San Pedro Formation, which is made up of sand, gravel, silt and clay, which includes Lomita marl, Timm's Point silt, and San Pedro Sand members (Randell, p. 23). Below this are the Pico, Repetto, and Puente Formations (Randell, p. 27).

The site is part of the Long Beach Plain, an older marine plain, which is bounded on the north by Signal Hill and on the northeast by the Bixby Ranch Hill, parts of the Newport-Inglewood structure. It lies between the Dominguez Gap on the west and the Alamitos Gap on the east. The Pacific Ocean serves as its southern boundary. It was once joined to the Torrance Plain, but has been separated by the downcutting of the Los Angeles River system. It is underlain by the same kind of sediments as the Torrance Plain, as a result (DWR, pp. 27-28).

The site is located in Sections 35 and 36 of Township 4 S., Range 13 W. within the City of Long Beach, County of Los Angeles, California. This site is located on the U.S. Geologic Survey (USGS) Long Beach quadrangle (1964, photo revised 1981) topographic map. The elevation is approximately 10 feet above mean sea level. By examination of the topographic map, it is apparent that the land generally slopes west towards the Los Angeles River.

Site Hydrogeology

One of the three main stream channels for the Coastal Plain of Los Angeles County, the Los Angeles River, is approximately 200 feet west of the site and discharges into the Pacific Ocean. This river flows southerly across the plain and drains the San Fernando Valley and central basin. The second main channel, the San Gabriel River, lies about four miles to the east of the site, and drains the San Gabriel Valley and the eastern Downey Plain, before emptying into the Pacific Ocean.

The Coastal Plain of Los Angeles County is divided into four groundwater basins. These basins are generally separated from one another by geologic features which impede groundwater movement. The site is in the West Coast Basin. This basin extends southwesterly from the Newport-Inglewood uplift to the Santa Monica Bay, to Palos Verdes and to San Pedro Bay. It extends from the Ballona Excarpment and Baldwin Hills on the northwest to the county line on the southeast (DWR, p. 129). Although much of the basin has undergone extensive subsurface geologic investigation, much less is known about the Long Beach Plain because few wells have been drilled there (DWR, p. 129). However, it is believed that the aquifers in this basin have reduced capacity to contain and transmit groundwater (LADPWb, p. 10).

The depth to groundwater at the site is believed to be about 15 feet to the shallow aquifer, based on EPICS' experience at a location about 300 yards north of the SITE where a groundwater sample was obtained six months ago.

Groundwater Well Information

According to the most recent available well data records that were obtained on September 13, 1995, from Geneva Arismendy with the Los Angeles County Department of Public Works

(LACDPW), Hydraulic/Water Conservation Division, the closest active groundwater well to the site (Well #400) is located near the intersection of Hill Street and Magnolia Avenue about one mile north-northeast of the site. The last recorded depth to groundwater (measured on 10/13/94) was 20.0 feet bgs. The ground surface elevation at this location is 13.1 feet above Mean Sea Level. Thus, the water surface elevation is 6.9 feet below Mean Sea Level.

Information provided by Bob Villanueva, Senior Civil Engineer with the Long Beach Water Department, on December 8, 1995, indicates the closest active drinking water well to the site is Citizen Well #10. Its most recent measurement on March 11, 1995, indicated groundwater depth at 73 feet below ground surface and a surface elevation of about 47 feet. Therefore, the water surface elevation is 26 feet below Mean Sea Level. This well is located near Spring Street between Temple and Redondo Avenues, which is approximately four miles northeast of the site. He stated that the Water Department does not use groundwater for drinking water from wells south of Pacific Coast Highway because the water is discolored and the quality is low. Apparently, wells south of Pacific Coast Highway have not been used for a long time. The Water Department uses groundwater north of Pacific Coast Highway.

Screening Procedures

In this instance, screening procedures are not required to determine the first boring location needed to determine the vertical extent of contamination. This is because the source of the contamination has been identified as the underground gasoline tank that was previously present at the site. The first boring (B-1) will be located as close as possible to the previous location of the underground tank. However, since the excavation is still open, for safety reasons, it may not be possible to obtain a sample directly underneath the former tank location unless the pit is less than five feet deep.

Borings B-2, B-3 and B-4 will be drilled in three lateral directions at distances of approximately fifteen to twenty feet from the source in an effort to delineate the plume by identifying areas where no contamination can be detected. See boring location map found in the Appendix. Field screening procedures will be used to determine whether or not additional borings are warranted. These procedures primarily rely upon visual observation and odor. PID readings will be used only to supplement these primary procedures.

As sampling is performed, soil from each sampler will be extruded into a zip-lock baggie, placed in the sun, and allowed to volatilize. A head space analysis will be performed as a field screening technique using a photo-ionization detector (PID) calibrated onsite using a 50 ppm hexane gas standard. After being left at ambient temperature for approximately 10 minutes, the head space in the bag will be evaluated using the PID. This instrument registers the concentration of total

organic vapors in the head space, which is an indication of the presence of volatile organic materials in the soil.

Extent of Contamination and Boring Depth

It is important to note that the nature of the work is essentially exploratory, and for this reason it is difficult to ascertain the exact number and depth of samples required to characterize the site. Most of the decisions as to the extent of necessary drilling and sampling will be made on site while the work is being performed and will be based on field observations of the soil; such as the odor, PID readings, texture, and lithology. However, based on the soil lithology and the level of contamination found underneath the tank during the tank removal, it is estimated that four borings will be needed to fully characterize the site. It is estimated that each boring will be drilled to a maximum depth of fifteen feet. It is important to note these are only estimations. The actual depth and number of borings will depend on the screening procedure described above.

Soil Cutting Disposal

Virtually no soil cuttings will be generated during the sampling and analysis procedures. Any cuttings generated will be piled onsite and covered with plastic for proper disposal with other soil onsite. If required, the appropriate Hazardous Waste Manifests will be filed and documented with the Site Assessment Report.

Sampling Plan

Soil samples will be taken from each borehole at five foot intervals as described below. A total of three samples will be taken from each borehole, plus one of groundwater. Assuming that only four borings are necessary to the depths described earlier, 14 samples will be taken. Not all these samples will be sent to a laboratory for analysis. It is estimated that three of the samples in boring B-1 will be sent to the laboratory. Two of these samples will be the soil taken at ten and fifteen feet, plus one of groundwater. It is estimated that up to two samples from each of the remaining three borings will be sent to the laboratory. These will include the samples with the highest PID readings and the deepest sample. In addition, a sample of groundwater obtained from one of the borings west of B-1 will be analyzed. This is the presumed direction of groundwater gradient (toward the river).

Sampling Protocol

Drilling

Drilling and sampling activities will be supervised by a California-registered Civil Engineer (P.E.) with extensive soils experience. A detailed log of the drilling activities and materials encountered will be maintained by the P.E. Drilling and sampling methods will follow procedures described in the California Department of Health Services Site Mitigation Decision Tree Manual (CDHS, 1986).

The boreholes will be drilled using a hand auger with a 2.25-inch diameter (O.D.) auger. The soil samples will be collected in brass sample sleeves using an 6-inch sampling tube that holds one 6-inch long sample sleeve. Advancement of the auger will be halted at the desired sample depth and the sampler will be lowered into the hole. The sampler will then be driven into the soil using a slide hammer. The number of blows required to advance the hammer 18 inches will be recorded as an indicator of the soil density and consistency.

Once water has been reached, the auger will be advanced an additional two feet and then removed. A water sample will then be pulled with a slotted-PVC bailer.

No drilling fluids will be introduced into the boreholes unless heaving sands are encountered, in which case potable water will be added. Boreholes drilled for soil sample analysis will be grouted once the drill stems are removed. The grout will consist of Portland cement mixed with 5-percent powdered bentonite.

Sampling Procedures

Soil samples for laboratory analysis will be collected from the boreholes. Data obtained for each sample will be recorded in the field and include the following:

1. Sample depth interval and the sample number.
2. Description of soil and moisture content.

3. Lithologic changes within the samples.
4. Sampler penetration and recovery lengths.
5. Number of blows per 6-inch or partial lengths.
6. PID headspace readings for the sample.

This information will be included in the borehole logs completed by the site engineer.

Equipment Decontamination

Decontamination of drilling equipment is required prior to the drilling of soil borings. This will be accomplished by washing with Alconox™, and then double-rinsing.

The sampler sleeves to be submitted for laboratory analysis will be capped with Teflon™ sheeting and sealed with plastic end caps. The samples will then immediately be placed into a chilled ice chest. All samples will be transported in a chilled condition to a California-certified analytical laboratory on the same day taken, maintaining proper chain-of-custody documentation. The samples will be analyzed by the lab within one week.

Selected samples will be tested for the following:

- Carbon Chain Fingerprint, using modified EPA Method 8015;
- BTEX, using EPA Method 8020; and
- Total Dissolved Solids, using EPA Method 160.1 (water only)

The laboratory performing the test is certified by the California Department of Health Services Environmental Laboratory Accreditation Program. The laboratory that will perform these tests is Southland Technical Services, 7801 Telegraph Road, Suite J, Montebello, CA 90640.

INTRODUCTION

This site-specific Health and Safety Plan (HASP) presents health and safety requirements and guidelines for performance of work for characterizing soil impacted by motor vehicle fuel at the Long Beach City Tow Yard, 901 West Anaheim Street, Long Beach, California.

This HASP is in compliance with applicable sections of 8 CCR 5192 and 29 CFR 1910.120 and is prepared for the use by EPICS International employees, consultants, and its subcontractors. This HASP will not be used for work other than that described herein; nor will it be modified or used after the expiration date without written approval by the Project Manager (PM) and the Site Safety Officer (SSO). In addition, this HASP will not be used by firms or persons not under contract to EPICS without written approval by EPICS' Site Safety Officer. This HASP is not valid unless it is signed and dated by the PM and the SSO. Subcontractors may use their own HASPs if such a provision is contained in an agreement with EPICS. General health and safety requirements prepared by subcontractors must be as stringent as those contained in this HASP.

AUTHORITY AND RESPONSIBILITIES

This section discusses the responsibilities of the Project Manager (PM), Site Safety Officer (SSO), and all other site personnel. This plan is intended for use by EPICS employees and their subcontractors only. Each contractor and subcontractor will be responsible for the safe and healthful performance of work by each of its employees and support personnel who may enter the work zone.

Project Manager (PM)

The PM has the responsibility for implementing this HASP. The PM shall comply with applicable regulations and ensure that the operations and procedures proceed according to the HASP. The PM has the authority to suspend work when the health and safety of field personnel or the public is threatened. The PM also has the authority to remove individuals from the site for engaging in activities that jeopardize the health and safety of themselves or others.

The Project Manager retains overall site authority, except in the event of personnel exposure to contaminants. The PM conducts safety meetings together with the Site Safety Officer (SSO), implements standard operating procedures for the characterization operations and works with the SSO on site to implement the HASP. The PM shall be responsible for the following:

- Inspect the work site with the SSO before work begins and periodically throughout the workday to identify predictable hazards and safeguards necessary for worker protection.
- Instruct employees on their responsibilities in the area of safety and occupational health.
- Ensure the SSO gives instructions on hazards and safety precautions to new employees when they are first employed. The PM must ensure employees are instructed in

recognizing the hazards of the job and in the methods and the means to avoid injury and illness.

- Shall not permit employees to work in an unsafe place unless for purpose of making it safe and then only after proper precautions have been taken to protect employees while doing the work.
- Require employees to use safety devices and personal protective equipment when necessary.
- Allow only those employees qualified by training or experience to operate equipment, machines, vehicles or tools.
- Report safety deficiencies and hazards to EPICS' Principal-in-Charge and the SSO.
- Submit regular, verbal reports to EPICS' Principal-in-Charge.

The PM has overall responsibility for site health and safety. The SSO is responsible for assisting the PM in carrying out the health and safety requirements detailed in this plan.

Site Safety Officer (SSO)

The Site Safety Officer reports directly to the PM and keeps him/her abreast of the daily activities. The SSO is also responsible for writing the HASP and ensuring that all employees designated to work at the site understand its content and application. The SSO ensures that all employees designated to work within the exclusion zone have participated in the 40-hour Hazardous Waste Operations and Emergency Response training course and the 8-hour annual refresher course, in accordance with 8 CCR 5192 and 29 CFR 1910.120, and have received medical clearance to work on site when required. The SSO is responsible for the following:

- Inspect equipment, machines, tools, the use of chemicals or substances or mixtures, work procedures, and work sites to identify hazards and potential hazards and maintain a documentation file of safety inspections.
- Review the provisions of this plan with all personnel involved in the project. Also ensure that the HASP is read and that the compliance sheet is signed by everyone entering the site.
- Control and enforce the use of the required Personal Protective Equipment (PPE).
- Provide technical assistance and conduct safety meetings to personnel working at the site on the safe and healthful use of chemicals, hazardous substances, and mixtures used or encountered at the work site.

- Maintain a field logbook which includes such items as working hours, names of people entering and leaving the site, instrument status, background readings, action levels reached or exceeded, and all other information relevant to health and safety at the site.
- Investigate all accidents and near misses.
- Document and keep copies of initial and subsequent accident and injury reports and review and analyze them.
- Direct day-to-day health and safety activities in the field. The SSO must be present at the work site whenever work is being performed by EPICS employees or its subcontractors. The SSO is responsible for advising the PM on health and safety matters and monitoring compliance.
- Conduct personal and environmental air monitoring as needed.
- Implement the HASP and enforce its guidelines.
- Maintain within the HASP all required worker training and medical documentation.
- Maintain a list of addresses and telephone numbers of emergency assistance units (ambulance service, police, and hospitals), and inform other members of the field team of the existence and location of this list.
- Correct any work practices or conditions that may result in injury or worker exposure to hazardous substances.
- Recommend methods of minimizing work site hazards to the degree necessary to create a safe and healthful work site.

The SSO has the authority to suspend work when the work site contains hazards which threatens the health and/or safety of field personnel or the public. The SSO may also remove individuals from the site for engaging in activities that jeopardize themselves or others.

Site Personnel

EPICS will have site personnel typically composed of a 2- or 3-person subcontractor drill crew (plus the SSO and PM). Site personnel will perform drilling activities, decontamination procedures, other work around the exclusion zone, and observe all applicable guidelines in the Health and Safety Plan. The site personnel will be responsible for the following:

- Report work-related injuries or illnesses to the SSO immediately, regardless of severity.

- Use personal protective equipment and safety devices which have been provided for use in performing work assignments, and replace or repair defective equipment items and parts.
- Report defective equipment immediately to the SSO, such as a safeguard or safety device which is not operational or is missing.
- Report unsafe or dangerous conditions in the work site to the SSO.
- Follow the HASP guidelines in addition to the standard operating procedures for the drilling operations.
- Conduct self in a professional and responsible manner while at the work site.

Responsible Individuals

Authorized EPICS International personnel for this project are:

Salma Jetha - Project Manager
Christopher W. Myers - Principal-in-Charge
Jeff Walker - Site Safety Officer

All other EPICS personnel that received the required health and safety training are authorized for site work in the event that the above mentioned individuals are unavailable.

DOCUMENTATION AND RECORDKEEPING

EPICS will obtain health and safety clearances before beginning work at the site from EPICS' Project Manager. To obtain clearance, a worker must have: (1) been certified within the past 12 months by an approved physician as being physically fit to wear respiratory protective devices and to work with hazardous chemical substances, (2) successfully completed a 40-hour basic hazardous waste site worker training course, and (3) passed a respirator fit test with irritant smoke as indicators.

EPICS' subcontractors are responsible for ensuring that their employees also have similar medical, training, and respirator fit clearance and will be required to provide proof of clearance before beginning work.

The names of all EPICS and subcontractor employees who perform work on the site will be recorded and the record maintained in the HASP.

All personnel who enter the exclusion zone must be trained to understand the potential health and safety hazards associated with their tasks. In accordance with 8 CCR 5192 and CFR 1910.120, all personnel will have received a minimum of 40-hours of initial instruction prior to entering the

exclusion zone and a minimum of three days of field experience under the direct supervision of a qualified Supervisor.

Safety Briefing

Before on-site work commences, all EPICS and subcontractor employees assigned to work on site will be briefed by the SSO on the site-specific health and safety requirements contained in this plan, as well as the job functions, potential hazards present, and the protective equipment required. The SSO giving the briefing will assess the workers knowledge and understanding of the provision of this HASP and will not allow anyone who does not appear to understand the provisions perform work in the exclusion area. The date of briefing sessions and attendees will be recorded and the records maintained in the HASP. Area safety orientation/training meetings will be convened: 1) before the field work begins on a daily basis, 2) when there are modifications to the Health and Safety Plan that are applicable to field personnel, or 3) when additional personnel begin field work. The meetings will be attended by those workers involved in carrying out the project and who will be affected by changes being implemented. The meeting agenda will include the following:

- A review of the plan.
- Verification of medical and safety training.
- Distribution of modifications to the plan.
- Attendee signatures, acknowledging receipt and understanding of the plan and the compliance agreement.

Distribution of HASP

Before the work begins, a copy of this HASP will be provided to each EPICS employee, consultant, and subcontractor assigned to work at the site, as well as to an authorized representative of each firm contracted by EPICS to perform work on site. Individuals assigned to work at the site must acknowledge receipt of the plan and agree to comply with its provisions in writing.

The following records and/or copies of records will be maintained on-site by the SSO:

- A list of personnel qualified to work.
- A sign-in sheet of all personnel entering and exiting the exclusion zone.
- This Health and Safety Plan with compliance agreements.
- Exposure monitoring data from the direct reading instruments, e.g., photo-ionization detector (PID).
- Onsite medical monitoring performed such as heat stress monitoring

Medical clearance letters, including respiratory protection certifications, are maintained in EPICS offices.

Incident Reporting

Injuries, exposures, illnesses, safety infractions, and other incidence specified in the Health and Safety Manual must be reported to EPICS within 24 hours of occurrence.

Visitor Clearances

Visitors will not be allowed within the exclusion zone, unless they comply with the safety requirements of this plan. Barrier tape, cones, or other markings will be used to mark off the exclusion zone.

Posting Requirements

The following information will be posted or readily available on site:

- The location of the overhead power line.
- Emergency phone numbers.
- Directions to the nearest hospital.
- Health & Safety Plan

SITE DESCRIPTION AND WORK ACTIVITIES

Site Description

Long Beach City Tow Yard located at 1400 San Francisco Avenue, in Long Beach, California had an underground fuel tank, four feet in diameter, removed on August 30, 1995. The tank was installed in 1945 and is believed to have contained motor vehicle fuel. The City was unaware of the existence of the tank on the property until a historical records review was completed. The site may have been a lumber yard that burned down prior to the City purchasing the property fifteen years ago. During removal, the tank, which was located 2 feet below ground surface, had visible holes. The soil beneath the tank was found to contain 7,500 ppm petroleum hydrocarbons in the gasoline range as analyzed by EPA Method 8015M and 22 ppm benzene, 17 ppm toluene, 98 ppm ethylbenzene, and 470 ppm xylene analyzed by EPA Method 8020. The spoils pile contained no detectable levels of petroleum hydrocarbons or benzene, toluene, ethylbenzene, and xylene (BTEX).

Work Activities

A Phase II site characterization entails the use of a drill rig or hand augering equipment to bore holes into the soil in order to obtain soil samples at varying depths. Typically, hollow-stem auger techniques are used to obtain undisturbed soil samples. Alternately, a hydro- or geo-punch device is used. Two or three man crews operate the drill rig while a soils engineer or geologist classifies the soil and a safety officer monitors for contamination.

Chemical Hazards

The primary chemicals of concern at this Site for worker protection are as follows:

Gasoline-impacted Soil

Gasoline releases may have taken place at the site. Gasoline petrol is a flammable petroleum fractionation. Various functional additives are blended into gasolines, but probably the most critical property is the octane number, supplied with high octane hydrocarbons and lead compounds. The major components are primarily paraffins, olefins, naphthenes, aromatics and ethyl alcohol. Gasoline may cause hyperemia (excessive blood supply) of the conjunctiva (the exposed surface of the eye) and other disturbances of the eye. It is also a skin irritant and a possible allergen. On acute inhalation, humans experience intense burning of the throat and respiratory system. At extremely high concentrations where oxygen displacement is a factor, asphyxiation may occur. Severe intoxication is accompanied by central nervous system effects, coma and convulsions with epileptiform seizures.

Benzene

Benzene is a colorless, highly flammable liquid with an odor characteristic of aromatic hydrocarbons. As an acute poison, benzene produces potent narcotic effects. Chronic exposure acts on the bone marrow to cause detectable alterations and in some cases aplastic anemia. Benzene is also characterized as a carcinogen because it causes leukemia. As with any carcinogen, exposure should be restricted to very low levels that can still be reliably measured.

Inhalation Exposure

The exposure limits of the primary chemicals of concern for worker protection are as follows:

Chemical	Exposure Limits (ppm)			
	PEL	TLV	STEL	IDLH
Gasoline	300	300	N/A	N/A
Benzene	1	0.1	150	3,000
Toluene	100	100	150	2,000
Ethylbenzene	100	100	125	2,000
Xylene	100	100	150	1,000

PELs are permissible exposure limits established by the California Division of Industrial Relations (Cal/OSHA).

TLVs (Threshold Limit Values) are exposure guidelines associated with occupational exposures to various compounds for 8-hour work day/40-hour work week situations, as adopted by the American Conference of Governmental Industrial Hygienists (ACGIH, 1991-1992).

STELs (short-term exposure limits) are the maximum exposure over a fifteen minute time period.

IDLH (Immediately dangerous to life or health) represents the maximum concentration from which, in the event of respirator failure, one could escape within thirty minutes without a respirator and without experiencing any escape-impairing or irreversible health effects.

Benzene is a suspected carcinogen in humans. It is not anticipated that airborne levels of site contaminants will pose a threat to employees. However, half-face air-purifying respirators with high efficiency organic vapor cartridges will be kept on hand for the duration of the project.

Dermal Exposure

Direct skin contact with site contaminants may cause irritation and dermatitis. There is a potential for further exposure if the skin is broken. Contact shall be avoided by wearing protective gloves, steel-toed boots, and protective clothing. However, if contact does occur, the exposed areas shall be washed with soap and water and rinsed thoroughly, as soon as possible.

Ingestion Exposure

Site contaminants can enter the body by ingestion causing internal tissue damage. Therefore, drinking, eating, and smoking will not be allowed within the exclusion zone. Prior to eating or before leaving the site, personnel will wash their hands and faces. Smoking is NOT allowed on the site, except in areas designated for that purpose.

Eye, Foot, Head and Back Protection

While working in the exclusion zone foot protection will be provided by steel-toed work boots. Safety glasses will be worn at all times while working at the property. Hard hats are required at all times within the exclusion zone site. In the event continuous heavy lifting is required, back support will be used.

Physical Hazards

The physical hazards associated with the project include noise, falling, tripping, fire hazard/explosion, heavy equipment operation, buried utilities, traffic, powered hand tool, and trenching and excavation.

Noise

Working near mechanical equipment can subject workers to excessive levels of noise. Ideally, personnel who do not need to be next to noisy equipment should stay as far away as possible to lower their risk to noise-induced hearing loss. Site personnel who must work next to this equipment will wear hearing protection such as ear plugs or muffs to reduce their exposure. Whenever noise levels exceed the time weighted average of 85 D.B.A. over the 8-hour workday, the employees are automatically included in the Company's Hearing Conservation Program whereupon audiograms are provided and hearing protectors are required. Exposure near or above this level is not expected to occur during this project

Falling and Tripping

The work area may become cluttered with equipment. These situations can result in workers falling or tripping and subsequently injuring themselves. To reduce this risk, the SSO will report trip hazards to the crew's foreman, and have them immediately taken care of.

Fire Hazard/Explosion

If gasoline contaminants are on-site, they could possibly create a volatile environment, therefore, no open flame or smoking will be allowed within the exclusion zone.

Measurements of the total airborne organic level will be taken with a photo-ionization detector (PID) for health purposes. Because excessive PID levels will cause adverse health effects well before explosive levels are reached and combined space entry will not be performed, a combustible gas indicator (CGI) will not be necessary.

If excessive PID readings are present (see Direct Reading Equipment Monitoring section), evacuation of the area will be performed as follows:

- Extinguish all possible ignition sources in the work area. Shut down electrically and fuel-powered motors.
- Move personnel at least 100 feet away from work area.
- Contact the SSO

Heavy Equipment

Drill rigs are typically used to drill bore holes in order to obtain soil samples at the job site. Operators must be cognizant of their surroundings while operating all mechanized equipment. In all cases, rotating shafts or gears should be covered to protect accidental contact. In some cases, where rotating parts cannot be adequately guarded, only experienced operators should be allowed to work around these rotating parts. Personnel who must work around rotating equipment should not wear loose fitting clothes that could become easily caught. Personnel operating the heavy equipment must be trained.

Utilities

Special precaution must be taken when drilling on a site with electrical power lines and other utilities in the vicinity. Electricity can shock, burn, and result in death. Overhead and buried utilities should be located, noted, and emphasized on all boring location plans and assignment sheets. No work will be performed where equipment, such as a drill rig, could come into contact with, or be within 25 feet of, any overhead power lines.

There is an overhead power line which runs east to west over the excavated pit at the subject property. The overhead power line is about 25 feet above the pit. For this reason, a drill rig is not being used during the soils investigation. Instead, hand augering equipment will be used. The

SSO will review with the site personnel the location of the overhead power line and all necessary precautions to prevent any injuries.

Underground electrical lines are as dangerous as overhead lines. Be aware and always suspect the existence of underground utilities such as electrical power, gas, petroleum, telephone, sewer, and water. Ask for assistance:

- If a sign warning of underground utilities is located on a site boundary; do not assume that underground utilities are located on or near the boundary or property line under the sign: Telephone the utility company and check it out. The underground utilities may be a considerable distance away from the warning sign.
- Always contact the owners of the utility lines or the nearest underground utility location service before digging. The utility personnel should determine the location of underground lines, and mark and flag these locations. Determine, with the utility personnel what specific precautions must be taken to assure safety.

There may be a number of buried electrical and telephone transmission lines at the site. The underground utility locations must be found and marked by a utility locator source prior to digging operations. The boring locations will be shifted if necessary to avoid the underground obstructions. If the boring is done in an area not previously surveyed by a utility locator source, the initial five feet will be drilled by hand rather than a hollow stem auger.

Traffic

The possibility of an individual being injured or struck by vehicular traffic must be considered. Therefore, personnel must always be alert when moving vehicles from a protected area. In addition, barricades and devices must be used to warn traffic. Individuals that are directing or controlling traffic should wear a bright reflector vest to become more visible to drivers.

Hand Tools

Hand tools such as a concrete cutting saw may be used to accomplish the work tasks. All personnel operating this piece of equipment, or any other hand tool, must be familiar with all safety features of the equipment as well as adequately trained in its use. The following are some generic safety guidelines:

- Keep all tools clean and check the condition before you use them. If heads of striking tools become mushroomed or burred, have them dressed. If handles are splintered, broken or loose, have them replaced before you use the tool.
- Use the proper tool for the job to be accomplished. If the tool requires too much exertion, it is not the right tool.
- Position your hands so that your fingers do not get smashed if the wrench slips or the connection suddenly loosens or "breaks".

- Carrying tools in your pockets is dangerous, especially if the tool are sharp or pointed. Always use a tool kit or tool belt when carrying tools.
- Tools and equipment powered by electricity, compressed air or compressed gases can be dangerous to you and may cause serious injury to others if not properly handled. Only properly trained, authorized and qualified people are allowed to operate this equipment.
- Guards shall be kept in place at all times except when making repairs. When making repairs or adjustments, all hand held power tools must be unplugged or disengaged from the power source. Stationery power tools must be properly locked out when making repairs or making adjustments.

Open Pits and Excavations

The location where the former underground tank was removed is now an open, 5-foot deep pit, measuring approximately 10' x 10' in size at the surface. It is bordered by a chain link fence on the south side. The utility pole is located about three feet from the edge of the excavation on the east side.

Preparation

Prior to initiating any work, it will be the responsibility of the PM to locate and mark all existing utilities. The PM will notify owners or operators of project site at least two days before starting work. If utilities cannot be located prior to excavation by a utility company, all possible care should be used.

Any open excavations will be covered and/or fenced to prevent worker injury.

All natural surface obstacles (trees, boulders, poles) shall be made safe or removed before starting any drilling.

Of the hazards or hazardous situations noted in this section, there does not appear to be any situation that cannot be adequately controlled. Physical hazards can be minimized by educating the workers about the potential hazards and limiting access to the work area. Chemical hazards can be reduced or controlled by educating the workers about the hazards, using protective equipment supplemented with air monitoring and implementing safe work practices.

AREA CONTROL

Access to a 25' perimeter around the drill rig, decontamination area, and monitoring area will be controlled to reduce the probability of occurrence of physical injury and chemical exposure of field personnel, visitors and the public. This area is known as the exclusion zone. The outer boundary of the exclusion zone will be established according to the location of the drill rig or related equipment. The perimeter will be clearly marked by physical barriers. Access control is established at the periphery of the exclusion zone to regulate the flow of personnel and equipment into and out of the zone and to verify implementation of proper entering and exiting procedures. No one will be allowed into the exclusion zone without the appropriate protective equipment and required training.

The boundaries of the exclusion area will be identified by barricades, or emergency traffic cones or posts, depending on the conditions. If such areas are left unattended, signs warning of the danger and forbidding entry will be placed around the perimeter of the area. This is especially important if the work areas are accessible to the public. Trenches and other large holes will be guarded with wooden or metal barricades spaced no further than 20 feet apart and connected with yellow or yellow and black nylon tape not less than $\frac{3}{4}$ of an inch wide. The barricades will be placed no less than two feet from the edge of excavation or hole.

Entry to exclusion area will be limited to individuals who must work in those areas. Unofficial visitors will not be permitted to enter the area while work is in progress. Official visitors will be discouraged from entering the area, but may be allowed to enter only if they agree to abide by the provisions of this document, follow orders issued by the SSO, and are informed of the potential dangers that could be encountered in the area.

PERSONAL PROTECTIVE EQUIPMENT

The equipment listed below will be available on-site for use when needed:

- + NIOSH-approved **Half-Face Air Purifying Respirators with organic vapor cartridges** (for use only as needed by personnel covered by and trained under EPICS' Respiratory Protection Program).
- + **Protective clothing** such as Tyvex, as appropriate, will be worn while handling contaminated materials
- + **Latex or leather Gloves** will be worn when handling contaminated materials.
- + **Steel-toed boots** must be worn at all times within the exclusion zone.
- + **Earplugs** will be worn by all individuals working around mechanized equipment, when required.
- + A **First Aid Kit** will be available at the site to assist with small scale injuries.
- + **Dry chemical or CO₂ fire extinguishers** will be available at the site and placed in a readily accessible location.
- + **Barricades** will be established to designate the decontamination and exclusion zone areas.

Facial hair must not interfere with respiratory protection equipment. Beards or mustaches that interfere with the seal of the mask will not be permitted on the site.

The "Buddy System" shall be used on site to:

- Warn partner of an impending hazard.
- Provide aid in case of injury, and notify appropriate personnel of accidents.

DECONTAMINATION PROCEDURES

Decontamination of equipment and personnel is necessary to confine the contaminants to the exclusion zone. Prior to leaving the exclusion zone, all major equipment, tools and materials will be cleaned to remove grease, oil, or encrusted dirt. EPICS will provide the necessary components for personnel and equipment decontamination.

Personal Decontamination

A decontamination station and procedure will be established by the SSO during site mobilization. The procedure will consist of a dry decontamination where all gloves, protective clothing and boots will be brushed clean.

Prior to eating and drinking, personnel will wash their hands and faces with soap and water. All contaminated water will be left onsite for the duration of the job.

Affected materials should be removed from skin using a mild detergent and water. Hot water is more effective than cold water and liquid dish washing detergent is more effective than hand soap.

Equipment Decontamination

All major reusable equipment and other tools used for work will be decontaminated prior to leaving the exclusion zone. Equipment will be decontaminated with a 2-bucket wash system: the first bucket being tap water and Alconox solution, and the second being tap water.

DIRECT READING EQUIPMENT/MONITORING

The following direct reading instruments will be on site:

- PID - is the preferred instrument for monitoring total organic vapor concentrations at the site during trenching/excavation operations. At each monitoring location, the ambient background reading (15 minute average) will be measured upwind of the work zone.

Vapor monitoring will be performed as often as necessary and wherever necessary to protect field personnel from hazardous vapors. Monitoring must be performed by individuals trained in the use and care of the required instruments. Due to the fact that toxicity levels are considerably lower than explosivity action levels, monitoring efforts should focus initially on detection of toxic vapors. The presence of explosive levels of gases and vapors should be performed only when gas/vapor concentrations exceed the ppm range of the monitoring instruments and when explosive levels are expected (e.g., inside tanks and other enclosed spaces).

The sample intake orifice or the detector must be positioned in a safe place downwind of the borehole and the instrument alarm should be set to sound at the action level. If the alarm sounds while monitoring for toxic concentrations the sample orifice or detector should be moved so that vapor concentrations in the breathing zone of individuals closest to the excavation are measured. Decisions regarding respirator use should be based on breathing zone vapor concentrations.

Draeger tubes will be available, if needed, for detecting benzene and will be used periodically during activities within the contaminated zones. Colorimetric tubes capable of measuring concentrations of 0.5 to 10 ppm benzene will be maintained on site for this purpose.

The typical variation of detector tubes varies from 10 to 30 percent, depending on the compounds of concern and the concentration ranges measured. Detector tubes are designed for concentration levels at or around the Threshold Limit Value (TLV) for each respective substance.

Each of the response levels and associated actions are described below:

PETROLEUM PRODUCT RESPONSE CRITERIA

Petroleum Products as total Hydrocarbons using a PID	Sample Frequency	Action Taken
THC < 300 ppm and Benzene < 0.1 ppm	30 Minutes	Implement Engineering Controls
300 ppm ≤ THC < 3,000 ppm or 0.1 ppm ≤ Benzene < 10 ppm	30 Minutes	Use Half-face Respirators
THC ≥ 3,000 ppm or Benzene ≥ 10 ppm	30 Minutes	Leave Area

EMERGENCY NOTIFICATION AND REPORTING

The SSO is trained to render basic first aid. Every injury will be reported, investigated and entered in the field log. In the event of fire, explosion, accident or injury, the SSO or other site personnel will contact the appropriate emergency response group. The emergency telephone listed below are for obtaining emergency services at St. Mary's Hospital. Emergency Notification List

Site Information

Long Beach City Tow Yard, located at 901 West Anaheim Street, in Long Beach, California, had one 550-gallon underground storage tank removed on August 30, 1995. The tank was pitted with holes. When the tank was removed, soil samples were collected underneath the tank and from the excavated soil pile and analyzed. According to an analytical report dated August 31, 1995, prepared by Fullerton Environmental Laboratory, the soil underneath the tank contained elevated levels of total petroleum hydrocarbons (TPH) as gasoline and benzene, toluene, ethylbenzene, and xylenes (BTEX). Specifically, 7,500 ppm of gasoline, 22 ppm of benzene, 17 ppm of toluene, 98 ppm of ethylbenzene, and 470 ppm xylenes were detected in the soil underneath the tank at a depth of eight feet below ground surface. No detectable levels of gasoline or BTEX were found in the spoils pile which was composed of soil from around the sides and on top of the tank. (See Exhibit G for a copy of the chain-of-custody and laboratory report, as well as the Long Beach Fire Department Inspection Report.) Because of these elevated levels, further assessment was required to determine the extent of the elevated levels of gasoline and BTEX.

The City Tow Yard is owned by the City of Long Beach and is maintained by the Fleet Services Bureau, 2801 East Willow Street, Long Beach, CA 90806. The Fleet Services Supervisor for this site is David McCarty, (310) 570-5410. A plot plan of the facility may be found in Exhibit A.

EPICS International was retained by the City of Long Beach to perform a characterization of the site in order 1) to determine the vertical and horizontal extent of contamination at the site; 2) to determine the concentration and type of contamination involved; and 3) to determine if groundwater has been impacted. This report serves as the Final Site Characterization Report for the impacted soil.

All work performed by EPICS International was done in accordance with all applicable local, state, and federal laws and regulations. EPICS submitted an Initial Assessment Report as a

workplan for this project to the City of Long Beach Department of Health and Human Services on December 11, 1995. A copy of the Permit-to-Operate for site characterization issued by the City of Long Beach Department of Public Health covering this work can be found in Exhibit 2.

Prior to beginning work onsite, EPICS notified the City of Long Beach Department of Health and Human Services and Underground Services Alert to mark subsurface utilities in the proposed drilling areas.

Environmental Setting

Site Geology

Regionally, the site is within the southwestern portion of the Coastal Plain of Los Angeles County, which is bounded by the Santa Monica Mountains on the north, the Elysian, Repetto, Merced, and Puente Hills on the northeast, and the Pacific Ocean on the south and west. The City of Long Beach is located near the southern boundary of the plain. Therefore, the tectonic setting, structure and stratigraphy here parallel that of the plain as a whole. The most visible geologic structure in the city is the Newport-Inglewood structural zone, which runs from Beverly Hills southeast to Newport Beach. Its major surface features include the Baldwin Hills, Dominguez Hills, and Signal Hill. This zone divides the city diagonally and separates the basin's primary southwestern and central structural blocks. This zone has been recognized as an effective, near-surface groundwater barrier (Randell, p. 21).

Surficial deposits in the area of the site are believed to be from the Terrace Cover structure, comprising reddish-brown sand, nonfossiliferous and probably largely continental. The stratigraphy below this is Palos Verdes Sand, comprising sand and some pebble gravel, fossiliferous and marine, which crops out locally at edges of mesas, followed by unnamed deposits of silt, sand, and gravel, which are inferred to crop out only locally at edges of mesas. Local unconformity separates this structure from the San Pedro Formation, which is made up of sand, gravel, silt and clay, which includes Lomita marl, Timm's Point silt, and San Pedro

Sand members (Randell, p. 23). Below this are the Pico, Repetto, and Puente Formations (Randell, p. 27).

The site is part of the Long Beach Plain, an older marine plain, which is bounded on the north by Signal Hill and on the northeast by the Bixby Ranch Hill, parts of the Newport-Inglewood structure. It lies between the Dominguez Gap on the west and the Alamitos Gap on the east. The Pacific Ocean serves as its southern boundary. The Long Beach Plain was once joined to the Torrance Plain, but has been separated by the downcutting of the Los Angeles River system. As a result, it is underlain by the same kind of sediments as the Torrance Plain (DWR, pp. 27-28).

The site is located in Sections 35 and 36 of Township 4 S., Range 13 W. within the City of Long Beach, County of Los Angeles, California. This site is located on the U.S. Geologic Survey (USGS) Long Beach quadrangle (1964, photo revised 1981) topographic map (see Exhibit 3). The elevation is approximately 10 feet above mean sea level. By examination of the topographic map, it is apparent that the land generally slopes west towards the Los Angeles River.

Site Hydrogeology

One of the three main stream channels for the Coastal Plain of Los Angeles County, the Los Angeles River, is approximately 200 feet west of the site and discharges into the Pacific Ocean. This river flows southerly across the plain and drains the San Fernando Valley and central basin. The second main channel, the San Gabriel River, lies about four miles to the east of the site, and drains the San Gabriel Valley and the eastern Downey Plain, before emptying into the Pacific Ocean.

The Coastal Plain of Los Angeles County is divided into four groundwater basins. These basins are generally separated from one another by geologic features which impede groundwater movement. The site is in the West Coast Basin. This basin extends southwesterly from the Newport-Inglewood uplift to the Santa Monica Bay, to Palos Verdes

and to San Pedro Bay. It extends from the Ballona Excarpment and Baldwin Hills on the northwest to the county line on the southeast (DWR, p. 129). Although much of the basin has undergone extensive subsurface geologic investigation, much less is known about the Long Beach Plain because few wells have been drilled there (DWR, p. 129). However, it is believed that the aquifers in this basin have reduced capacity to contain and transmit groundwater (LADPWb, p. 10).

The depth to groundwater at the site was believed to be about 15 feet below the ground surface, based on EPICS' experience at a location about 300 yards north of the SITE where a groundwater sample was obtained six months ago. However, groundwater was encountered during this investigation at about eight feet below ground surface.

Groundwater Well Information

According to the most recently available well data records that were obtained on September 13, 1995 from Geneva Arismendy with the Los Angeles County Department of Public Works (LACDPW), Hydraulic/Water Conservation Division, the closest active groundwater well to the site, (Well #400) is located near the intersection of Hill Street and Magnolia Avenue about one mile north-northeast of the site. The last recorded depth to groundwater (measured on 10/13/94) was 20.0 feet bgs. The ground surface elevation at this location is 13.1 feet above Mean Sea Level. Thus, the water surface elevation at this location is 6.9 feet below Mean Sea Level.

Information provided by Bob Villanueva, Senior Civil Engineer with the Long Beach Water Department, on December 8, 1995, indicates the closest active drinking water well to the site is Citizen Well #10. Its most recent measurement on March 11, 1995, indicated groundwater depth at 73 feet below ground surface and a surface elevation of about 47 feet. Therefore, the water surface elevation is 26 feet below Mean Sea Level. This well is located near Spring Street between Temple and Redondo Avenues, which is approximately four miles northeast of the site. He stated that the Water Department does not use groundwater for drinking water from wells south of Pacific Coast Highway because the water is discolored and the quality is

low. Apparently, wells south of Pacific Coast Highway have not been used for a long time. The Water Department uses groundwater north of Pacific Coast Highway.

Screening Procedures

The source of the contamination has been identified as the 550-gallon underground fuel tank that was previously present at the site. Site characterization efforts occurred on December 14, 1995 and January 18, 1996. Soil samples were collected from six soil borings excavated

at the site and three samples were collected from the beneath the exposed surfaces of the excavation; the locations of these borings and samples can be found in Exhibit D. The first boring (B-1) was located adjacent to the excavated pit, in the southwest corner. Borings B-2, B-3, B-4 and B-5 were drilled in four lateral directions at distances of approximately 20 feet, 15 feet, 20 feet, and seven feet, respectively, from the center of the excavation. Boring B-6 was drilled approximately six feet from the center of the excavation near the southeast corner, and approximately 14 feet from Boring B-4. These locations were chosen in an effort to delineate the plume by identifying areas where no contamination would be detected.

In addition, soil samples were collected from the north and south sidewalls of the excavation at a depth of six feet below ground surface (and one foot depth into the exposed sides of the excavation). One additional soil sample was collected from the center of the excavation at a depth of approximately 10 feet below ground surface (and five feet below the exposed excavation).

Field screening procedures used to determine the location of borings and total depth primarily consisted of visual observation and odor. A photoionization detector (PID) was also used to supplement these screening techniques. As sampling was performed, a portion of the soil from each sampler was extruded into a zip-lock baggie, placed in the sun, and allowed to volatilize. A head space analysis was performed using a PID calibrated to a 100 ppm isobutylene standard. After being left at ambient temperature for approximately 10 minutes, the head space in the bag was evaluated using the PID. This instrument registers the concentration of total organic vapors in the head space, which is an indication of the presence of volatile organic materials in the soil. PID readings generally increased with depth.

Boring Depth

Borings B-1, B-3, B-4, B-5 and B-6 were advanced to 10 feet below the ground surface. Boring B-2 was advanced to a depth of 13 feet below the ground surface. Groundwater was encountered in all six borings. The depth to water was measured at approximately eight feet below ground surface in Borings B-2 and B-3. The depth to water in Borings B-4, B-5, and

B-6 was measured at approximately 8.5 feet below ground surface. Borings B-5 and B-6 were drilled a few days after a light rainfall, whereas Borings B-1, B-2, B-3 and B-4 were drilled the day following a moderate rainfall.

Soil Cutting Disposal

Because hand augering techniques were used to drill the borings, very small quantities of soil cuttings were generated during the sampling and analysis procedures. Cuttings that were determined to be clean based on visual and olfactory inspection were backfilled into the boring. Potentially contaminated cuttings were piled onsite and covered with plastic for proper disposal with other soil onsite.

Sampling Plan

Soil samples were taken from each borehole at five foot intervals as described below. The number of samples taken depended on the depth of each boring. Two soil samples were taken from Borings B-1, B-3, B-4, B-5 and B-6. Three soil samples were collected from B-3. A single sample was taken from the north and south sidewalls of the excavation and from the bottom center. All of the soil samples were analyzed for the full carbon chain fingerprint (EPA Method 8015M) and BTEX (EPA Method 8020).

Groundwater samples were also collected from Borings B-1, B-2, B-3, B-5 and B-6 at the air-water interface. All five of these samples were also analyzed for the full carbon chain fingerprint (EPA Method 8015M) and BTEX (EPA Method 602). No groundwater sample was taken from Boring B-4, although both the soil and water at that location had hydrocarbon odor.

Sampling Protocol

Drilling

Drilling and sampling activities were supervised by a California-Registered Civil Engineer (P.E.) with extensive soils engineering experience. A detailed log of the drilling activities and materials encountered were maintained by the P.E. (see Exhibit E). Drilling and sampling

methods followed procedures described in the California Department of Health Services Site Mitigation Decision Tree Manual (CDHS, 1986).

The boreholes were drilled using a hand auger, primarily because of an electrical line running directly over the excavated pit in an east to west direction. No drilling fluids were introduced into the boreholes. Rubble fill was encountered in the first three feet below the ground surface (except at Boring B-5). An electric-powered jack hammer was required to break through the asphalt surface and to assist in digging through this rubble. Drilling was performed to document hydrologic conditions, lithologically log the borehole, and allow collection of subsurface soil and water samples for chemical analysis.

All boreholes drilled during this characterization were backfilled with bentonite chips and hydrated with water, with the last one or two feet backfilled with soil.

Sampling Procedures

Soil samples and groundwater samples were collected from the boreholes for laboratory analysis. Soil samples were obtained at intervals of five feet. After the auger was advanced to the desired depth, a 2-inch (O.D.) diameter soil sampler containing one 6-inch-long by 1.875-inch diameter brass sleeve was lowered into the borehole. The sampler was driven into the soil using a slide hammer. After the sampler was advanced 6 inches, it was brought to the surface and the brass sample sleeve was removed. Both ends of the sample sleeve were immediately sealed with Teflon™ and plastic end caps. Soil samples were labeled and held in a chilled ice chest for transport to the laboratory.

Data obtained for each sample was recorded in the field and included the following:

1. Sample depth interval and the sample number.
2. Description of soil and moisture condition.
3. Lithologic changes within the samples.
4. Sampler penetration and recovery lengths.

This information is included in the borehole logs completed by the site engineer (Exhibit E).

Groundwater samples were collected from Borings B-1, B-2, B-3, B-5 and B-6. Once water was reached, the auger was advanced an additional two feet and then removed. Water samples were pulled with a single-use PVC bailer and transferred to two 40mL glass VOA vials. The sample was labeled with the boring number and depth and stored in a chilled ice chest for transport to the state certified laboratory.

Equipment Decontamination

Decontamination of drilling equipment was accomplished by washing with a one-percent AlconoxTM and water mixture and then double-rinsing with potable water. The soil sampler was decontaminated after each sample was collected following the above procedures.

Laboratory Results

At the completion of field activities, all samples were kept in a chilled condition until pickup by Southland Technical Services, a California-certified analytical laboratory located at 7801 Telegraph Road, Suite J, Montebello, CA 90640. Southland Technical Services is certified by the California Department of Health Services Environmental Laboratory Accreditation Program. Proper chain-of-custody documentation was maintained throughout the process. The samples were analyzed by the lab within one week (refer to Exhibit 6 for Chain-of-Custody & Lab Results).

Selected samples were tested for the following:

- Carbon Chain Fingerprint, using modified EPA Method 8015;
- BTEX, using EPA Method 8020 for soil and EPA Method 602 for water; and
- Total Dissolved Solids, using EPA Method 160.1 (water only)

The results of the analysis show that Boring B-2 is the only boring in which both the soil and groundwater do not contain TPH and BTEX above the laboratory detection limits or

regulated levels. The extent of contamination in the other borings varies. The results of the analytical testing performed on soil and water samples are reported in Table 1 and Table 2, respectively. In both tables, entries are in bold where the value exceeds the California Regional Water Quality Control Board, Los Angeles Region action threshold for petroleum contamination within 40 feet of a drinking water supply. (Note: Even though groundwater in the area of the site is not used for drinking water, and is not considered a potential drinking water source by the City of Long Beach Water Department, Board policy to treat all groundwater as potential drinking water sources unless the Total Dissolved Solids exceeds 3,000 ppm, deliverability is less than 200 gallons per day, or the existing contamination cannot be reasonably treated. The TDS level for the groundwater sampled from Boring B-1A is 1,800 ppm.)

Contaminant Plume

The results of the analyses show that there is slight soil contamination on the north side of the excavation, and more extensive contamination on the south side. However, the soil contamination does not appear to have spread very far through the soil. Results from Boring B-1 at 5.5' are significantly lower than the results of the sidewall sample collected from the south side of the excavation, which is closer to the source. In addition, the results from Boring B-6 at 5' are all either below detectable levels or below action levels. This boring is only five feet to the east of the south sidewall sampling point. Samples taken at five (or 5.5) feet below the ground surface from Borings B-2, B-3 and B-5 also show results either below detectable levels or below action levels.

The results from Boring B-4, on the other hand, show significant levels of contamination at five feet below the ground surface. It does not appear likely that this contamination stems from the tank location, since there is virtually no contamination at this level at Boring B-6, which lies directly between the tank location and Boring B-4. Instead, it appears more likely that the contamination found at Boring B-4 resulted from a different source, such as the tow yard operations. Boring B-4 is located within the actual tow yard, an area where vehicles are towed in and parked. This area is quite active, with cars being brought in and removed regularly.

The results also show significant contamination of soil at 10' below the ground surface in Borings B-3, B-4, B-5 and B-6, and in the center of the excavation. In all cases, these samples were collected below the upper surface of the groundwater. No contamination at 10' below the ground surface was detected in Boring B-2, which is located about 20' to west-southwest of the tank site.

Groundwater taken from next to the source, at Boring B-1, showed levels of TPH well above action levels. Contamination in Boring B-2 was either below detectable levels or below action levels. This suggests that groundwater is not flowing in this direction (west-southwest) or that contamination may just not have extended to this point. There is significant groundwater contamination to the northwest of the tank, at Boring B-5, to the northeast, at Boring B-3, and to the south, at Boring B-6.

Conclusions and Recommendations

It is evident that the petroleum hydrocarbon contamination of the soil has largely moved downward to groundwater. The only area where the amount of contamination in the soil is high enough to warrant action is the immediate area of the former tank location. It appears that this area extends approximately three feet or less along the south side of the existing pit, as well as approximately a foot or so along the north side. It is recommended that this soil be removed by excavation to a depth of about eight feet below ground surface, or to groundwater, whichever occurs first. During excavation and removal of the soils, sidewall samples should be collected and analyzed to verify that the impacted soils have been adequately removed. This will also assist in determining if the contamination encountered in Boring B-4 is from a separate source.

It is also recommended that three to four groundwater monitoring wells be installed around the former tank in order to determine the gradient direction and to monitor the levels of contamination. Once these wells are installed, it may be possible to determine whether other sources have contributed to contamination of groundwater.

Mr. Chris Myers
EPICS International
One World Trade Center, #1890
Long Beach, CA 90831

Project: 2032
Project Site: Long Beach City Tow Yard
Sample Date: 12-14-1995
Lab Job No.: V51259

Dear Mr. Myers:

Enclosed please find the analytical report for the sample(s) received by STS Environmental Laboratories on 12-15-1995 and analyzed by the following EPA methods:

EPA 8015M(Carbon Chain Finger Print)
EPA 602/8020 (BTEX)
EPA 160.1 (Total dissolved solids)

All analyses have met the QA/QC criteria of this laboratory.

The sample(s) arrived in good conditions (i.e., chilled, intact) and with a chain of custody record attached.

STS Environmental Laboratory is certified by the CA DHS (Certificate Number 1986). Thank you for giving us the opportunity to serve you. Please feel free to call me at (213) 888-0728 if our Laboratory can be of further service to you.

Sincerely,

Roger Wang, Ph. D.
Laboratory Director

Dear Ms. Jetha:

Enclosed please find the analytical report for the sample(s) received by STS Environmental Laboratories on 01-18-1996 and analyzed by the following EPA methods:

EPA 8015M(Carbon Chain Finger Print)
EPA 602/8020 (BTEX)

Analyses have met the QA/QC criteria of this laboratory.

The sample(s) arrived in good conditions (i.e., chilled, intact) and with a chain of custody record attached.

STS Environmental Laboratory is certified by the CA DHS (Certificate Number 1986). Thank you for giving us the opportunity to serve you. Please feel free to call me at (213) 888-0728 if our Laboratory can be of further assistance to you.

Sincerely,

Roger Wang, Ph. D.

Re: 901 West Anaheim Street, Long Beach, California

Dear Mr. Kwey:

The Long Beach City Department of Health and Human Services has received information regarding the above referenced site that is indicative of ground water contamination.

The purpose of this letter is to refer this matter to your agency. I have enclosed copies of all relevant reports and correspondence.

We would appreciate continuing to receive copies of all future reports and correspondence in order to keep our file up to date until the cleanup has been completed.

If you desire additional information regarding this matter, please contact Carmen Piro at 562/570-4137, Environmental Health, between the hours of 8:00 a.m. to 9:00 a.m. or 4:00 p.m. to 5:00 p.m., Monday through Friday.

Sincerely,

Jeff Benedict, R.E.H.S., M.P.A.

UNDERGROUND STORAGE TANK PROGRAM-GROUNDWATER ASSESSMENT LONG BEACH CITY TOW YARD 901 WEST ANAHEIM STREET, LONG BEACH (CASE #908130498)

Dear Mr. Metzger,

The Regional Water Quality Control Board, Los Angeles Region, is the primary agency charged with the responsibility for maintaining the existing and potential beneficial uses of the waters in the Los Angeles and Ventura Counties. Your case file for the above referenced subject site has been referred to this Regional Board from the Joint Powers Agency, Long Beach/Signal Hill. We have reviewed the "Final Site Characterization Report For The Phase II Environmental Assessment of Gasoline-Impacted Soil," dated January 31, 1996, submitted by the EPICS International, for the above referenced site. In reference to the above document, we have the following comments:

1. Based on the groundwater data provided by the above Report, it appears that groundwater plume has not been adequately defined. Therefore, you are required to submit a workplan for the installation of groundwater monitoring wells to fully define the extent of groundwater contamination.
2. The construction and development of groundwater monitoring wells must comply with the requirements prescribed in California Code of Regulations (CCRs), Title 23, Division 3, Chapter 16, Section 2649.
3. A site-specific Health and Safety Plan must be included with the Work Plan.
4. You are required to submit a detailed, scaled map indicating the location of surrounding business and residences in the vicinity of the referenced site. The information must be included in the Work Plan.
5. All reports submitted to this office must conform to the "Guidelines for Report Submittals," (June 1993) published by the Los Angeles County Department of Public Works.
6. The Work Plan must include the information on the depth to drinking water aquifer, hydrogeological units of the aquifer, and a scaled map showing the locations and identifications of all production wells and surface water bodies within one mile radius of the site.
7. The soil and groundwater samples must be analyzed by EPA Method 8015 for TPH_G, EPA Method 8021 or 8260B for BTEX, including methyl tertiary butyl ether (MTBE) and EPA Method 8260B for di-isopropyl ether (DIPE), ethyl tertiary butyl ether (ETBE), tertiary amyl methyl ether (TAME), tertiary butyl alcohol (TBA). If MTBE is detected it must be quantified using EPA Method 8260B.

California Environmental Protection Agency

The energy challenge facing California is real. Every Californian needs to take immediate action to reduce energy consumption
For a list of simple ways to reduce demand and cut your energy costs, see the tips at: <http://www.swrcb.ca.gov/news/echallenge.html>

Our mission is to preserve and enhance the quality of California's water resources for the benefit of present and future generations.

June 22, 2001

All soil samples must be prepared per EPA Method 5035. All analytical data must be reported by a California certified laboratory.

8. Pursuant to recent changes of the California Health and Safety Code (Sections 25299.37.2) and Division 7 of the Porter Cologne Water Quality Control Act under AB 681, the Regional Board is required to notify all current fee title holders for the subject site or sites impacted by releases from underground storage tanks prior to considering corrective action and/or cleanup or case closure. Since you are identified as the current primary or active responsible party for corrective action and/or cleanup at the subject site, we are requesting that you provide us with a complete mailing list of all record fee title holders for the subject site. Therefore, please provide along with your workplan the name, mailing address, and telephone for all record fee title holders for the subject site together with a copy of county record of current ownership (grant trust deed), available from the County Recorder's Office, for verification, or with the certification declaration as attached by **August 22, 2001**.

Pursuant to Sections 13267(b) of the California Water Code, you are required to submit a Work Plan by **August 22, 2001**. Failure to fully comply with the due date may result in enforcement action by the Regional Board.

If you have any question regarding this matter, please call Mr. Noman M. Chowdhury at (213) 576-6792.

Sincerely,

Gregg Kwey
Senior Water Resources Control Engineer

**SUBJECT: WORKPLAN TO ADVANCE GEOPROBES AND INSTALL
GROUNDWATER MONITORING WELLS**

Dear Mr. Chowdhury,

As directed in your letter to the City of Long Beach dated June 22, 2001, The Reynolds Group (TRG) is submitting this workplan to advance six (6) geoprobes and install three (3) groundwater monitoring wells at the subject site. Please see Figure 1-Site Location Map for detail. Additionally, during a review of the Los Angeles Regional Water Quality Control Board (LA RWQCB) case file for the subject property, it was discovered that LA RWQCB case file is missing the following reports: *Underground Storage Tank Closure Report* dated November 2, 1995 and *Final Site Characterization Report for the Phase II Environmental Assessment of Gasoline-Impacted Soils*. Please find enclosed one copy each of these reports. We trust that this material will help to advance this case toward closure.

SITE HISTORY

On August 30, 1995, one (1) 550-gallon gasoline underground storage tank (UST), and associated product piping were removed from the subject site as detailed in the *Underground Storage Tank Closure Report* by Maness Environmental Services, Inc., dated November 2, 1995. Two (2) soil samples were collected: one (1) from the below the UST excavation and one (1) from the stockpile. Laboratory analytical results indicated detectable concentrations of gasoline in the soils. (See Table 1 below). Groundwater was encountered at 8-10 feet below ground surface (ft bgs) in the tank excavation. On December 14, 1995 and January 18, 1996, six (6) soil borings were advanced to depths ranging from 5 to 13 feet below ground surface (bgs) and five (5) groundwater samples were collected at 10 feet bgs as detailed in the *Final Site Characterization Report for the Phase II Environmental Assessment of Gasoline-*

Impacted Soils by Epics International by Epics International. Three (3) additional soil borings were collected: two (2) from the north and south sidewalls of the excavation at 6 feet bgs and one (1) soil sample was collected from under the center of the excavation at 10 feet bgs. Laboratory analytical results indicated detectable concentrations of gasoline in the soils and groundwater. (See Tables 1 & 2 below).

PURPOSE OF THE WORK

The purpose of this work is to further assess the extent of groundwater contamination with geoprobes and install three (3) groundwater monitoring wells.

SCOPE OF WORK

Overview of the Work.

1. Advance six (6) Geoprobe and sample groundwater to further define the vertical and lateral extent of contamination.
2. Install three (3) on-site groundwater monitoring wells in the areas of greatest contamination as indicated by the results of the Geoprobe work.
3. Initiate groundwater monitoring at the site.
4. Prepare a report detailing the work and findings.

Geoprobe Groundwater Investigation. Six (6) geoprobes will be advanced to collect soil and groundwater samples. The laboratory results of the groundwater samples will provide a better definition of the vertical and lateral extent of gasoline-impacted soil and groundwater at the subject site. These results will aid in the location of three (3) groundwater monitoring wells. Soil samples will be collected at (5) five feet bgs and at the capillary fringe as described in the next-section "Groundwater Well Installation". Groundwater samples will be collected from (15) fifteen bgs..

Groundwater Well Installation. As described above and shown on the attached Figure 2, three 20-foot deep groundwater monitoring wells will be installed on the Site. The location and final design of the wells will be determined once the results from the Geoprobe work have been reviewed. The Reynolds Group (TRG) will fax you a map of the proposed locations.

Prior to installing the groundwater wells, we will obtain permits from the local regulatory agency(ies). A proposed well schematic is attached to this work plan and shows four-inch diameter schedule 40 PVC wells installed in a 12-inch borehole with the screened interval intercepting the saturated zone at a depth of approximately 11 feet bgs.

A photoionization detector (PID) will be used as a field-screening tool to determine the relative presence of petroleum hydrocarbons in the soils. During the drilling of the well boreholes, soil samples will be collected in brass sleeves at five-foot intervals using a California-modified split spoon sampler. In addition, samples will be collected approximately 2' above the water table and 2' below the water table. The soil lithology will be recorded. All samples will be prepared per USEPA Method 5035. Once the samples are collected, the filled sleeves will be covered with Teflon, capped with plastic covers, and uniquely identified with the boring number and depth. In addition, Encore calibrated five gram sampling devices will be used to supplement the sampling in accordance with Los Angeles Regional Water Quality Control Board protocols. The sample labeling will correspond to the following sequences: MW1-5' indicates the soil sample from boring MW1 at a depth of approximately 5 feet bgs.

The wells will be screened such that approximately five feet of screened interval will be above the piezometric surface and 10 feet of screened interval will be below the piezometric surface. Each well will be finished at the surface with a one-foot diameter, steel, traffic-grade well box with bolted lid to prevent incidental damages or liability. Please see Figure 3- Groundwater Monitoring Well Design for detail. A licensed surveyor will determine the elevation of the top of the well casings.

After developing the wells appropriately, we will sample and analyze the groundwater for TPH as gasoline and diesel, benzene, toluene, ethylbenzene, xylenes (BTEX), MTBE and other oxygenates as described in the next paragraph.

Laboratory Analyses. All soil samples will be prepared per USEPA Method 5035. Chain-of custody procedures will be followed in transporting the samples to the laboratory. Samples will be transported in a chilled state to the laboratory. Chemical & Environmental Laboratories (C&E) of Santa Fe Springs, California will be directed to analyze the samples. C&E is a state-certified laboratory. The samples will be analyzed by EPA Method 8015 for TPH modified for gasoline and diesel, and EPA Method 8260B for BTEX, MTBE, diisopropyl ether (DIPE), ethyl tertiary butyl ether (ETBE), tertiary amyl methyl ether (TAME) using the Los Angeles Regional Water Quality Control Board's most recent protocol.

Waste Disposal. The cuttings from the exploration work will be stored on site in labeled, 55-gallon drums. The cuttings will not be placed back into the borings. The probes will be backfilled with a bentonite slurry.

Report on the Work. The results of the fieldwork will be put into a report and include the seal of a California Registered Civil Engineer.

Quarterly Groundwater Monitoring Quarterly groundwater monitoring will be initiated.

HEALTH AND SAFETY PLAN

All staff and third parties who will be near or around the project will be required to sign the health and safety plan that has been prepared and is attached to this letter.

ELECTRONIC DELIVERABLE FORMAT

In fulfillment of State of California AB 2886, all laboratory data will be attached in electronic deliverable format or will be uploaded to GEOTRACKER. The Reynolds Group has been appointed by the responsible party as the agent for the transmission of electronic data to GEOTRACKER.

REGISTERED PROFESSIONAL STATEMENT

All work on this project is being performed under the responsible charge of a California Registered Civil Engineer. The licensed professional whose wet ink signature and seal appears at the end of this report will actually supervise or personally conduct all work associated with the project.

DEPTH TO WATER: Approximately 8 to 10 feet

A. TOTAL DEPTH OF BORING: 20 feet

B. CASING LENGTH: 20 feet.

C. BORING DIAMETER: 10 inches

D. CASING DIAMETER: 4 inches

E. PERFORATED ZONE:

Perforated from: 5 feet below ground surface
to 20 feet below ground surface.

Perforation type: factory slotted

Perforation size: 0.010 inches

F. SURFACE COMPLETION: 18 inches

Material: Concrete

G. SANITARY SEAL:

Depth: from surface completion to top of sand

Material: Hydrated medium bentonite chips

H. FILTER PACK:

Depth: 4 feet below ground surface.

to 20 feet below ground surface.

Material: #2/16 Sand

HEALTH AND SAFETY PLAN

SUBSURFACE INVESTIGATION

Long Beach City Tow Yard
901 West Anaheim Street
Long Beach, California

INTRODUCTION

The Reynolds Group (TRG) was engaged to perform a subsurface assessment at Long Beach City Tow Yard at 901 West Anaheim Street in Long Beach, California.

KEY PERSONNEL AND RESPONSIBILITIES

Following are key assignments for this project:

ASSIGNMENT

RESPONSIBLE PARTY

Project Manager:

Dwayne Ziegler/ Ed Reynolds

Project Site Safety Officer:

Dwayne Ziegler

Office Health and Safety Manager:

Ed Reynolds

The Project Manager (PM) has overall responsibility for field development and implementation of this Health and Safety Plan (HASP). The PM assigns health and safety related duties and responsibilities only to qualified individuals. Before anyone enters the work area, they must meet the requirements of 29 CFR 110.120 for medical examination and health and safety training.

The Project Site Safety Officer (PSSO), who must be on-site during all work activities, will be responsible for on-site health and safety activities. The PSSO has stop-work authorization that he will exercise when he perceives an imminent safety hazard, an emergency situation, or any other potentially dangerous situations, such as extreme weather conditions. If the PSSO stops work for a safety-related issue, work cannot begin again until approved by the OHSM. In an emergency, the PSSO will arrange for emergency support services when needed.

GENERAL SAFETY REQUIREMENTS

Continuous air monitoring for worker safety and regulatory compliance will be conducted using a photoionization detector (PID) or flame-ionization detector (FID) a minimum of every 15 minutes during the entire operation, unless directed otherwise by the appropriate regulatory agency officer(s) present on site.

Monitoring equipment, including PID/FID and CG/O2 meter, will be calibrated daily and calibration logs will be maintained on-site and made available upon request.

All on-site personnel operating within the work zone will show proof of current 40-hour hazardous waste operations training upon request.

Cellular telephones/radios will be available on-site at all times during work for communication in the event of an emergency.

HAZARD EVALUATION

The following is an evaluation of the hazards which might be associated with this project and the countermeasures which should be taken to remediate these hazards:

Exposure

POTENTIAL CHEMICALS:

The most likely chemical compounds to be encountered during this remediation are elevated petroleum fuel hydrocarbons, found typically in oil field operations.

ASSOCIATED HAZARD:

Gasoline, Diesel, Oil and Grease: Dermal: can defat and irritate skin
Inhalation: TLV's typically 300-600 ppm
Acute effects = irritant to skin, eyes, nose, mouth

BTEX: Dermal: can defat and irritate skin
Inhalation: TLV for benzene = 1 ppm
Acute effect = irritant
Chronic effect: benzene is a human carcinogen.

MTBE: Dermal: can defat and irritate skin
Inhalation: TLV for MTBE = 25 ppm
Acute effect = irritant
Chronic effects: MTBE is a human carcinogen.

EXPOSURE PROBABILITY AND LIKELY CONSEQUENCE:

A low hazard level exists where there is no contact with the chemicals, when low concentrations are encountered, or when proper protection is worn.

COUNTERMEASURES:

- When OVM reading is less than 50 ppm above background level wear Level D protection;
- When OVM reading is above 100 ppm for greater than 15 minutes wear Level C protection;
- When OVM reading is above 1000 ppm cease work operations until level decreases.

Fire and Explosion

POTENTIAL FOR FIRE OR EXPLOSION:

Workers may encounter fire or explosion hazards on this project. Fire or explosion could occur by rupturing an underground gas line or if digging through soil that contains high concentrations of fuel hydrocarbons.

EXPOSURE PROBABILITY AND LIKELY CONSEQUENCE:

Low probability with moderate consequence.

COUNTERMEASURES:

Seek information about possible underground obstructions from knowledgeable individuals before excavating. Note if Dig Alert has marked the site for underground lines (see Section 3.11).

Oxygen Deficiency

On-site workers are not likely to encounter an oxygen deficiency. Workers will not enter confined spaces on this project.

Ionizing Radiation

On-site workers are not likely to encounter radioisotopes or other hazardous ionizing radiation on this site.

Biologic Hazards

On-site workers are not likely to encounter biologic hazards on this site.

Safety Hazards

On-site workers may encounter physical safety hazards on this site. Work operations include:

- working near moving, powered machinery;
- slips, strains, trips, and falls;
- moving and lifting of heavy objects;
- use of hand tools, and
- use of motor vehicles.

COUNTERMEASURES:

Use experienced on-site persons. Wear hard-toed shoes and approved hard hats. Heighten worker awareness with a tailgate safety session for all on-site workers at the start of work each day. Maintain all equipment (including safety devices) in proper operation condition. Never leave an open excavation unattended.

Electrical

On-site workers could encounter electrical hazards on this site if the front loader contacts overhead power lines, if subsurface work encounters buried live electrical lines, if poor weather conditions exist, or equipment is not properly grounded.

COUNTERMEASURE:

Be sure not to raise the front loader in proximity to overhead power lines. Work shall cease if bad weather conditions exist. Equipment shall be grounded. Seek information about possible underground lines from knowledgeable individuals before excavating. Note if Dig Alert has marked the site for underground lines (see Section 3.11).

Heat Stress

There will be a low likelihood that on-site workers may encounter heat stress on this project. Workers will be wearing Tyvek suits and ambient temperature will likely be in the low-to mid-eighties.

COUNTERMEASURES:

Heighten worker awareness about heat stress at daily tailgate safety session. Monitor heart rate at break time. If heart rate exceeds 110 beats per minute, cut work period by one-third. Provide and encourage drinking of water and juices at the job site.

Cold Exposure

On-site workers are not likely to encounter cold exposure on this project.

Noise

On-site workers will likely encounter excessive noise levels from operation of the heavy equipment.

COUNTERMEASURE:

Workers will wear hearing protection around the backhoe and whenever they have trouble conversing in normal tones at a distance of about five feet.

Underground Lines

Every effort will be made to determine if underground lines exist beneath the site. Dig Alert will be contacted at least two working days prior to the commencement of work.

SITE CONTROL

For control purposes, the work area consists of a 160-foot area around the backhoe. It is open and workers will enter and leave the site with care. Smoking, eating, and drinking are prohibited in the immediate work area. The PSSO will exclude casual observers from the work area and will be on-site during work operations.

EMERGENCY RESPONSE PLAN

Following are emergency names, phone numbers, and contacts:

Police	911
Fire Department	911
Ambulance	911

Emergency Hospital Saint Mary Medical Center 1050 Linden Avenue Long Beach, California	(562)491-9000
---	---------------

The Reynolds Group 250 El Camino Real, Suite 204 Tustin, CA 92780	(714) 730-5397
---	----------------

Dwayne Ziegler, Project Manager:	(714)920-9311 - 24 Hours
----------------------------------	--------------------------

Closest Phone for Emergencies:	Cellular Phones
--------------------------------	-----------------

Medical Emergencies:

For emergencies requiring ambulance service, call 911 for transportation of injured to hospital. Life-flight is available and can be obtained when calling 911.

Nearest Facility:

For medical emergencies that do not require ambulance service, Saint Mary Medical Center is very near the Site. Directions from the Site to the hospital are as follows: Exit the Site and go east on Anaheim to south on Linden Avenue. The hospital is located on the southeast corner of Linden and 11th Street. The most direct route is shown on the attached map.

UNDERGROUND STORAGE TANK PROGRAM-SOIL AND GROUNDWATER ASSESSMENT LONG BEACH CITY TOW YARD 901 WEST ANAHEIM STREET, LONG BEACH (CASE #908130498)

Dear Mr. McCarthy:

We have reviewed "Workplan to Advance Geoprobos and Install Groundwater Monitoring Wells", dated November 15, 2001, prepared by The Reynolds Group, for the subject site. The workplan proposes to advance six geoprobos and install three groundwater monitoring wells in the areas of greatest contamination to fully define the vertical and horizontal extent of contamination beneath the subject site. We concur with the workplan, provided the following conditions are met:

1. If these proposed wells detect any petroleum hydrocarbons including oxygenates, then additional wells are to be installed at appropriate locations, during this phase of hydrogeologic assessment.
2. All work must be performed by or under the direction of a registered geologist, certified engineering geologist, or registered civil engineer. A statement is required in the report that the registered professional in direct responsible charge actually supervised or personally conducted accordance to all the work associated with the project, as defined in the Professional Engineers Act or the Registered Geologist Act of California Code of Regulations. The registered professional shall assume responsibility for the accuracy and completeness of the logs.
3. All soil samples to be analyzed must be prepared per USEPA Method 5035.
4. The soil and groundwater samples must analyzed for total petroleum hydrocarbons as gasoline (TPHg) and diesel (TPHd) with EPA Method 8015 modified, with EPA method 8260B for benzene, toluene, ethylbenzene, and total xylenes (BTEX) and fuel oxygenates methyl tertiary butyl ether (MTBE), di-isopropyl ether (DIPE), ethyl tertiary butyl ether (ETBE), tertiary amyl methyl ether (TAME), and tertiary butyl alcohol (TBA). If MTBE is detected it must be quantified using EPA Method 8260B. All analytical data must be reported by a California certified laboratory.
5. The construction and development of groundwater monitoring wells must comply with the requirements prescribed in California Code of Regulations (CCRs), Title 23, Division 3, Chapter 16, Section 2649.
6. All necessary permits must be obtained from the appropriate agencies prior to the start of work.

California Environmental Protection Agency

The energy challenge facing California is real. Every Californian needs to take immediate action to reduce energy consumption

For a list of simple ways to reduce demand and cut your energy costs, see the tips at: <http://www.swrcb.ca.gov/news/echallenge.html>

Recycled Paper

Our mission is to preserve and enhance the quality of California's water resources for the benefit of present and future generations.

Mr. David McCarthy
Long Beach City Tow Yard

February 19, 2002

7. Laboratory analyses and the reported results must be conducted in accordance with the "Leaking Underground storage Tanks Program-Updated Laboratory Testing Requirements," date June 22, 2000.
8. All reports must conform to the "Guidelines for Report Submittals" published by the Los Angeles County Department of Public Works, except for pages 28 & 29, which have been superseded by our low risk closure criteria and MTBE review procedure.
9. Please notify this Regional Board at least **seven days** prior to start of any fieldwork so that one of our staff may be present.
10. You are required to continue the quarterly groundwater monitoring and sampling at groundwater monitoring wells. The groundwater monitoring reports are to be submitted quarterly according to the following schedule:

<u>Reporting Period</u>	<u>Report Due Date</u>
January – March	April 15
April – June	July 15
July – September	October 15
October – December	January 15

Pursuant to Sections 13267(b) of the California Water Code, you are required to submit a technical report detailing this phase of the investigation to this Regional Board by **April 19, 2002**. Failure to fully comply with the due date may result in enforcement action by the Regional Board.

If you have any question regarding this matter, please call Mr. Noman M. Chowdhury at (213) 576-6704.

Sincerely,

Gregg Kwey
Senior Water Resources Control Engineer

PROJECT 9037 PUMP STATION

This is to introduce the consulting firm of Moffat & Nichol Engineers. This firm and their sub-consultants, Tetra Design, Inc., Diaz-Yourman & Associates, Cost Surveying, Inc., and Lynn Capooya, Inc., have been contracted to prepare plans and supporting data for the design of the above project for this Department. This contractual relationship is expected to last until June 1995.

Please cooperate with them and extend to them all courtesy due this Department. Should you have any questions regarding the above noted firms, please contact Mr. Jose Quevedo at (818) 458-7835.

Very truly yours,

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc. (EDR). The report meets the government records search requirements of ASTM Standard Practice for Environmental Site Assessments, E 1527-00. Search distances are per ASTM standard or custom distances requested by the user.

US BROWNFIELDS..... A Listing of Brownfields Sites
VCP..... Voluntary Cleanup Program Properties

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL ASTM STANDARD

CERCLIS-NFRAP: As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund Action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

A review of the CERC-NFRAP list, as provided by EDR, and dated 02/26/2004 has revealed that there is 1 CERC-NFRAP site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/15/2004 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Dist / Dir</u>	<u>Map ID</u>	<u>Page</u>
CROSBY & OVERTON PLANT NUMBER	1630 W 17TH ST	1/2 - 1 WNW 94		118

RCRIS: Resource Conservation and Recovery Information System. RCRIS includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs): generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs): generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs): generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRIS-SQG list, as provided by EDR, and dated 04/13/2004 has revealed that there are 11 RCRIS-SQG sites within approximately 0.25 miles of the target property.

CORTESE: This database identifies public drinking water wells with detectable levels of contamination, hazardous substance sites selected for remedial action, sites with known toxic material identified through the abandoned site assessment program, sites with USTs having a reportable release and all solid waste disposal facilities from which there is known migration. The source is the California Environmental Protection Agency/Office of Emergency Information.

A review of the Cortese list, as provided by EDR, has revealed that there are 24 Cortese sites within approximately 0.5 miles of the target property.

FEDERAL ASTM SUPPLEMENTAL

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 04/08/2004 has revealed that there are 3 FINDS sites within approximately 0.125 miles of the target property.

ELLIS FAMILY TRUST	718 ANAHEIM	1/8 - 1/4ESE	F18	23

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency

A review of the HAZNET list, as provided by EDR, has revealed that there are 21 HAZNET sites within approximately 0.25 miles of the target property.

MAP FINDINGS

STAPLETON TECHNOLOGIES INC (Continued)

1000348220

Threat to Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Reclamation: Not reported

Agency Contact: URBAN, BEN
Design Flow: Not reported
Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
Agency Type: ?
Waste Type: Not reported
Threat to Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.
Reclamation: Not reported
POTW: Not reported
NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
Subregion: 4

CAL BUMPER COMPANY INC (Continued)

S103633060

Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.

Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.

Agency Type: Private

Waste Type: Not reported

Threat to Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Reclamation: Not reported

USNAVY LONG BEACH NAVAL SHIPYARD (Continued)		1000231526
RCRIS Corrective Action Summary:		
Event:	Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.	
Event Date:	08/19/2003	
Event:	Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.	
Event Date:	03/09/2001	
Event:	Igration of Contaminated Groundwater under Control, More information is needed to make a determination.	
Event Date:	03/09/2001	
Event:	Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.	
Event Date:	06/04/1998	
Event:	Igration of Contaminated Groundwater under Control, More information is needed to make a determination.	
Event Date:	06/04/1998	
Event:	CMS Approved	
Event Date:	05/01/1998	
Event:	RFI Approved	
Event Date:	09/10/1996	
Event:	Stabilization Measures Evaluation, This facility is not amenable to stabilization activity because of a lack of technical data. An evaluation has been completed, but further data is necessary to determine stabilization measures, feasibility or appropriateness. This status should be changed when data becomes available.	
Event Date:	05/20/1994	
Event:	Stabilization Construction Completed	
Event Date:	03/01/1994	
Event:	Stabilization Measures Implemented, Primary measure is exposure control by barrier and/or institutional control (e.g., capping, fencing, deed restrictions).	
Event Date:	12/06/1993

During the period of 1965 to 1970, the then-owner of the site (Union Pacific Resources Company, UPRC) held agreements with outside parties to lease the property for the disposal of rotary muds and crude oil tank bottoms. There are anecdotal accounts that some of the wastes disposed to the property were not consistent with waste specified in the lease contracts. In 1991, the City of Long Beach conducted a pre-purchase due diligence site investigation. The site was purchased by the City from UPRC in 1994. From 1995 to 1997 the City conducted supplement investigations. Contaminants detected include high molecular weight hydrocarbons, volatile and semi-volatile organic compounds (including polynuclear aromatic hydrocarbons) and heavy metals

DETAILED ORPHAN LISTING

Site	Database(s)	EDR ID Number EPA ID Number
USNAVY LONG BEACH NAVAL SHIPYARD (Continued)		1000231526
Actvty Deleted Via Commitmnt/Completns Screen : Not reported Special Program Code: Not reported Special Program : Not reported Comments Date : 01292003 Comments : The site is being covered with a base rock layer and asphalt pavement to minimize surface water infiltration. Not reported The proposed remedial action in the RAP is excavation and on-site stabilization alternative which includes: excavation of sump soil, stabilization of sump soil by mixing with cement and placement of the excavated and stabilized sump soil in the treatment cell on top of the clean fill buffer. The stabilized sump soils will be covered with additional clean import fill and a base rock layer and asphalt pavement to minimize surface water infiltration. Not reported DES - PIER S/AREA 4: The Remedial Design and Specifications for site Remediation were completed. The site will be developed into a marine container terminal. Not reported The Remedial Action has been completed at this 176 acres. The remediation consisted of excavating contaminated soil from 33 former sumps (around 466,500 cubic yards), treatment of contaminated soil, placement and covering the site with around 17 feet of clean imported fill material to raise the surface level above sea level. The main contaminants at the site are Petroleum Hydrocarbons, Polycyclic Aromatic Hydrocarbons and some Chlorinated Solvents. Not reported On 9/24/1997 DTSC and the City of Long Beach Harbor Department executed a Voluntary Cleanup Agreement calling for DTSC oversight of Remedial Investigation/Feasibility Study - Risk Assessment and remedial activities for the site. Not reported The Remedial Investigation was conducted in five phases which include: an environmental assessment, an air and groundwater quality assessment, a quarterly groundwater monitoring program, a subsurface soil investigation, and a sump confirmation study indicating the presence of 32 sumps. Based on the RI findings and the baseline human health risk assessment, five remedial alternatives have been developed to address both soil and the shallow groundwater. Based on a screening analysis, it was determined that alternative 4: Excavation and On-site stabilization is the preferred alternative. Not reported

EPA Waste Codes Addendum

Code	Description
D001	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
D002	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
D003	A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.
D004	ARSENIC
D005	BARIUM
D006	CADMIUM
D007	CHROMIUM
D008	LEAD
D009	MERCURY
D011	SILVER
D013	LINDANE
D014	METHOXYCHLOR
D016	2,4-D
D018	BENZENE
D020	CHLORDANE
D027	1,4-DICHLOROBENZENE
D035	METHYL ETHYL KETONE
D039	TETRACHLOROETHYLENE

EPA Waste Codes Addendum

Code	Description
F001	THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
F002	THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
F003	THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
F005	THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
F006	WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.
F007	SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS
F008	PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM ELECTROPLATING OPERATIONS WHERE CYANIDES ARE USED IN THE PROCESS.
F009	SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS WHERE CYANIDES ARE USED IN THE PROCESS.
P028	BENZENE, (CHLOROMETHYL)-
P028	BENZYL CHLORIDE

EPA Waste Codes Addendum

Code	Description
U122	FORMALDEHYDE
U223	BENZENE, 1,3-DIISOCYANATOMETHYL- (R,T)
U223	TOLUENE DIISOCYANATE (R,T)

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Elapsed ASTM days: Provides confirmation that this EDR report meets or exceeds the 90-day updating requirement of the ASTM standard.

FEDERAL ASTM STANDARD RECORDS

NPL: National Priority List

Source: EPA

Telephone: N/A

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 04/27/04

Date Made Active at EDR: 05/21/04

Database Release Frequency: Semi-Annually

Date of Data Arrival at EDR: 05/04/04

Elapsed ASTM days: 17

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

Source: EPA

Telephone: 703-413-0223

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 02/26/04

Date Made Active at EDR: 04/02/04

Database Release Frequency: Quarterly

Date of Data Arrival at EDR: 03/22/04

Elapsed ASTM days: 11

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Source: EPA

Telephone: 703-413-0223

As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

RCRIS: Resource Conservation and Recovery Information System

Source: EPA

Telephone: 800-424-9346

Resource Conservation and Recovery Information System. RCRIS includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs): generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs): generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs): generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

US BROWNFIELDS: A Listing of Brownfields Sites

Source: Environmental Protection Agency
Telephone: 202-566-2777

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become BCRLF cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Date of Government Version: 04/14/04
Database Release Frequency: Semi-Annually

Date of Last EDR Contact: 03/15/04
Date of Next Scheduled EDR Contact: 06/14/04

RMP: Risk Management Plans

Source: Environmental Protection Agency
Telephone: 202-564-8600

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

SWF/LF (SWIS): Solid Waste Information System

Source: Integrated Waste Management Board
Telephone: 916-341-6320

Active, Closed and Inactive Landfills. SWF/LF records typically contain an inventory of solid waste disposal facilities or landfills. These may be active or inactive facilities or open dumps that failed to meet RCRA Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 03/15/04
Date Made Active at EDR: 04/14/04
Database Release Frequency: Quarterly

Date of Data Arrival at EDR: 03/17/04
Elapsed ASTM days: 28
Date of Last EDR Contact: 03/16/04

WMUDS/SWAT: Waste Management Unit Database

Source: State Water Resources Control Board
Telephone: 916-227-4448

Waste Management Unit Database System. WMUDS is used by the State Water Resources Control Board staff and the Regional Water Quality Control Boards for program tracking and inventory of waste management units. WMUDS is composed of the following databases: Facility Information, Scheduled Inspections Information, Waste Management Unit Information, SWAT Program Information, SWAT Report Summary Information, SWAT Report Summary Data, Chapter 15 (formerly Subchapter 15) Information, Chapter 15 Monitoring Parameters, TPCA Program Information, RCRA Program Information, Closure Information, and Interested Parties Information.

Date of Government Version: 04/01/00
Date Made Active at EDR: 05/10/00

Toxics and criteria pollutant emissions data collected by the ARB and local air pollution agencies.

Date of Government Version: 12/31/02
Database Release Frequency: Varies

Date of Last EDR Contact: 04/20/04
Date of Next Scheduled EDR Contact: 07/19/04

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

REF: Unconfirmed Properties Referred to Another Agency

Source: Department of Toxic Substances Control

Telephone: 916-323-3400

This category contains properties where contamination has not been confirmed and which were determined as not requiring direct DTSC Site Mitigation Program action or oversight. Accordingly, these sites have been referred to another state or local regulatory agency.

Date of Government Version: 03/02/04

Database Release Frequency: Quarterly

Date of Last EDR Contact: 03/03/04

Date of Next Scheduled EDR Contact: 05/31/04

SCH: School Property Evaluation Program

Source: Department of Toxic Substances Control

Telephone: 916-323-3400

This category contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. In some cases, these properties may be listed in the CalSites category depending on the level of threat to public health and safety or the environment they pose.

Date of Government Version: 03/02/04

Database Release Frequency: Quarterly

Date of Last EDR Contact: 03/03/04

Date of Next Scheduled EDR Contact: 05/31/04

NFE: Properties Needing Further Evaluation

Source: Department of Toxic Substances Control

Telephone: 916-323-3400

This category contains properties that are suspected of being contaminated. These are unconfirmed contaminated properties that need to be assessed using the PEA process. PEA in Progress indicates properties where DTSC is currently conducting a PEA. PEA Required indicates properties where DTSC has determined a PEA is required, but not currently underway.

Date of Next Scheduled EDR Contact: 05/31/04

HAZNET: Hazardous Waste Information System

Source: California Environmental Protection Agency

Telephone: 916-255-1136

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

US BROWNFIELDS: A Listing of Brownfields Sites

Source: Environmental Protection Agency

Telephone: 202-566-2777

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become BCRLF cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

APPENDIX G
RESUMES OF PROJECT PERSONNEL

TARA M. HOLMES

Education

B.S. - California State University, Los Angeles, 2003
Geology

Affiliations

National Ground Water Association
Women's Environmental Council

Professional Experience

Since joining SCS, Ms. Holmes's project experience has included:

- Phase I Environmental Assessments of property to assess the potential for contamination. These projects consist of evaluating current on-site operations, generation of historical property use information, identifying potentially contaminated sites in the surrounding areas, and review of files maintained by regulatory agencies.
- Coordination and implementation of Phase II site investigations involving soil and soil vapor sampling; precision mapping of sites; and evaluation of known and/or suspected contaminants.
- Oversight of deep soil mixing remediation project to mitigate the hazards associated with hydrocarbon and chlorinated solvent contamination in accordance with regulatory requirements.
- Installation and field monitoring of methane wells to assess the nature and extent of subsurface explosive gases for proposed development.
- Obtaining city and county non-production well permits.

Ms. Holmes has participated in a certified health and safety program in compliance with OSHA Standard 29 CFR 1910.120 and 8 CCR 5192. She is knowledgeable in incident response operations, team functions, personnel safety, and field equipment. She is able to recognize and evaluate potential chemical and physical hazards and associated risks in field operations; discuss and use personal protective equipment such as respiratory protection and protective clothing; use and interpret direct-reading instruments; and examine and establish Standard Operating Guidelines to ensure safe and effective response operations.

Prior to joining SCS, Ms. Holmes was Manager of Administrative Business and State Administrator for 39 offices that served as follow-up centers for the Genetic Disease Branch of the State of California with responsibilities that included coordination of client facilities, professional staff, and reporting and compliance with California regulations.

KEVIN W. GREEN, R.G., R.E.A.

Education

B.S. - California State University, Long Beach, 1978
Marine Biology

Professional Licenses

Registered Geologist - California, 1994 (No. 5906)
Registered Environmental Assessor - California, 1992 (No. REA-03945)

National Ground Water Association
Society of Economic Paleontologists and Mineralogists

Professional Experience

Mr. Green has a background in geology and paleontology. Since joining SCS in 1987, he has been involved in numerous projects related to the investigation and remediation of hazardous chemicals in soils and groundwater. Selected projects in which Mr. Green has participated include:

- Project Manager for hundreds of Phase I environmental assessments. These projects consist of evaluating current on-site operations, generation of historical property use information, identifying potentially contaminated sites in the surrounding areas, and review of files maintained by regulatory agencies.
- Project Manager for numerous investigations of hazardous waste sites to identify and characterize contaminants in soil and groundwater in accordance with regulatory requirements. Contaminants include a variety of hydrocarbon products, heavy metals, polychlorinated biphenyls (PCBs), and pesticides.
- Project Manager for numerous projects related to the assessment and remediation of contaminant plumes from leaking underground storage tanks. In accordance with the requirements of numerous regulatory agencies throughout southern California, Mr. Green has developed work plans and health and safety plans, coordinated and conducted field investigations, evaluated and implemented remedial alternatives, and prepared summary reports.
- Project Manager for numerous remediation projects involving the excavation, transport, and disposal or treatment of hydrocarbon, pesticide, and/or heavy metal contaminated soils.

KEVIN W. GREEN, R.G., R.E.A. (continued)

- Project Manager for numerous soil gas surveys utilized to assess the presence, nature, and extent of subsurface gases related to contaminated soils and/or landfills.
- Coordination and supervision regarding the installation of vapor extraction systems for the remediation of volatile contaminants in subsurface soils.
- Evaluation of environmental conditions at sanitary landfills. Mr. Green was Task Manager for the installation and sampling of groundwater monitoring wells at and adjacent to existing landfills to determine the presence of leachate. This work was done in strict accordance with state regulations and local ordinances.
- Expert testimony regarding the investigation of hazardous waste sites.
- Research support related to litigation and expert testimony.

Specific projects that Mr. Green has been involved with at SCS include:

- Project Manager for Well Investigation Program compliance under Regional Water Quality Control Board (RWQCB) oversight at a jet engine repair, maintenance and testing facility in the San Fernando Valley Superfund area.
- Project Manager for general environmental consulting services for the Community Redevelopment Agency of the City of Los Angeles. Projects conducted under the multi-year contract include numerous environmental assessments, asbestos, lead-based paint, soil, and groundwater investigations and remediation. Project sites include commercial, industrial, and residential properties up to 232 acres in size.
- Participation in the preparation of an Environmental Impact Report addressing environmental concerns associated with proposed remedial action for the Del Norte Superfund site in Crescent City, California.
- Project Manager for assessment and oversight activities related to closure of the PSAirmotive jet engine repair/testing facility in San Diego for client acquiring the facility. Tasks included a Phase I assessment; asbestos survey; soil gas and soils investigations of underground storage tanks, plating shop, and various chemical storage and use areas; evaluation of air and wastewater permits; evaluation of regulatory requirements for closure; and assistance to legal counsel in evaluating environmental liabilities.

Mr. Green has participated in a certified health and safety program in compliance with OSHA Standard 29 CFR 1910.120. He is knowledgeable in incident response operations, team functions, personnel safety, and field equipment. Mr. Green is able to recognize and evaluate potential chemical and physical hazards and associated risks in field operations; discuss and use

KEVIN W. GREEN, R.G., R.E.A. (continued)

personnel protective equipment such as respiratory protection and protective clothing; use and interpret direct-reading instruments; and examine and establish Standard Operating Safety Guidelines to ensure safe and effective response operations.

Mr. Green has been involved in numerous SCS projects related to hazardous waste characterization and management. He has experience in site assessment studies, underground tank investigations and their associated remediation programs, landfill studies, and geologic and hydrogeologic site characterization studies. His work experience includes all project phases from development of cost estimates for various site assessment and cleanup programs, to groundwater monitoring and sampling, to preparation of final reports and interfacing with regulatory agencies.

LIMITATIONS/DISCLAIMER

This report has been prepared specifically for Overland, Pacific & Cutler, Inc., on behalf of the City Attorney of the City of Long Beach with application to a Phase II Investigation Report of the Long Beach Public Service Yard, 1601 San Francisco Avenue in Long Beach, California. This report has been prepared in accordance with the care and skill generally exercised by reputable professionals, under similar circumstances, in this or similar localities. No other warranty, expressed or implied, is made as to the professional opinions presented herein. Third parties use this report at their own risk. SCS assumes no responsibility for the accuracy of information obtained from, compiled or provided by outside sources.

This assessment focused on potential sources of hazardous substances and petroleum hydrocarbons that could be considered a potential liability due to their presence in significant concentrations (e.g., above acceptable limits set by federal or state agencies) or due to the potential for contaminant migration through exposure pathways (e.g., ground water). Hazardous substances naturally occurring in plants, soils, and rock (e.g., radon, or naturally-occurring asbestos) are not typically considered in these investigations.

Changes in site use and conditions may occur due to variations in rainfall, temperature, water usage, economic, or other factors. It is possible that additional information exists beyond the scope of this investigation. Additional information, which was not available to the consultant at the time of this investigation, or changes that may occur on the site or in the surrounding area may result in modification to the site that would impact the summary and recommendations presented herein. This report is not a legal opinion.

EXECUTIVE SUMMARY

SCS was retained by Overland, Pacific & Cutler, Inc. on behalf of the City Attorney of the City of Long Beach to conduct a Phase II Investigation for the Long Beach Public Service Yard at 1601 San Francisco Avenue in Long Beach, California (the "Property"). The purpose of this investigation was to assess the potential for contamination on the Property from the environmental concerns identified in the Phase I Environmental Assessment report dated February 22, 2005, completed by SCS Engineers (SCS). It is SCS's understanding that portions of the Property may be considered for non-residential (i.e., industrial) redevelopment.

The findings and conclusion of this report are presented in two approaches, 1) based on the chemicals of potential concern and 2) based on previously identified recognized environmental conditions.

Chemicals of Potential Concern

Hydrocarbons – With the exception of the former kerosene UST area, no obvious signs of hydrocarbon-impacted soil were noted during the field investigation. Excluding the kerosene UST area, 15 soil samples were analyzed from representative areas of the Property. As shown in Table 2, none of these samples contained concentrations of petroleum hydrocarbons above the Los Angeles Regional Water Quality Control Board's (RWQCB) Soil Screening Levels (SSLs).

Kerosene-related hydrocarbons (TPH-g and TPH-d) were detected in the three 10-foot soil samples collected from the borings B24 through B26. TPH and VOC impacts in the area of the former kerosene UST are discussed in the section on recognized environmental conditions below.

VOCs – Thirty soil vapor samples and 13 bulk soil samples were collected and analyzed from areas of potential environmental concern identified on the Property. With the exception of samples from the former 500-gallon kerosene UST area, only trace concentrations of 1,1,1 TCA, PCE, and/or dibromochloromethane were detected in soil vapor or bulk soil samples. Based on our experience with similar sites, concentrations of VOCs in this range are generally not of concern to regulatory agencies, and are not considered a recognized environmental condition for the Property.

Petroleum-related VOCs were detected in the three 10-foot soil samples collected from borings B24 through B26. TPH and VOC impacts in the area of the former kerosene UST are discussed in the section on recognized environmental conditions below.

Metals – Eighteen samples were analyzed from representative areas of the Property as shown in Table 3. The analytical results from these samples can be compared with:

- Health risk based standards: that is, the PRGs

- California waste disposal standards: the Total Threshold Limit Concentrations (TTLCs) and Soluble Threshold Limit Concentrations (STLCs) as defined in Title 22 of the California Code of Regulations
- Federal waste disposal standards: the Toxicity Characteristic Leaching Procedure (TCLP) as identified in the Code of Federal Regulations

Health Risk Standards – Using these criteria, and as shown in Table 3, lead exceeds the industrial PRG for soils in the following areas:

- B5-5' – Car wash area
- B12-1' – Parking lot/suspected fill area
- B14-5' and B14-10' – Parking lot/suspected fill area

And arsenic exceeds the industrial PRG in the following area:

- B5-5' – Car wash area

Soils from these areas should be considered a potential health risk if disturbed in the future.

Waste Disposal Criteria – With regarding to waste disposal criteria, there are three samples (from B5 and B14) shown in Table 3 with concentrations of lead above the TTLC of 1,000 mg/kg. Soils with concentrations detected in these samples would be considered hazardous for the purposes of disposal under California regulations if removal is considered in the future.

Total metals concentrations, which exceed ten times their respective STLC values, may, upon laboratory analysis for the soluble fraction, be found to exceed the STLC and therefore the soils may be considered hazardous for the purposes of disposal under California regulations. Based on sample results for B2-1', B5-5', B9-1', B10-1', B12-1', B14-5', B14-10', and B19-1' soils in these areas may (upon further laboratory analysis) contain one or more metals at concentrations that would classify them as hazardous for the purposes of disposal under California regulations.

Further, metals concentrations, which exceed twenty times their respective TCLP values, may, upon laboratory analysis for the soluble fraction, be found to exceed the TCLP and therefore be considered hazardous for the purposes of disposal under Federal regulations. Based on samples B2-1' and B5-5' soils in these areas may (upon further laboratory analysis) contain one or more metals at concentrations that would classify these soils as hazardous for the purposes of disposal under Federal regulations.

If soils are excavated from these areas, they should be tested in order to determine appropriate disposal options/requirements.

Organochlorine Pesticides – No organochlorine pesticides were detected in the samples analyzed. Based on these results, no impact to the Property is anticipated from organochlorine pesticides.

Recognized Environmental Conditions

As previously discussed, the Phase I Environmental Assessment identified the following recognized environmental conditions for the Property:

Fill Material – Debris from the 1933 earthquake may have been placed on the western portion of the Property. This material may contain asbestos, lead-based paint, or other substances of potential environmental concern. Known and suspected fill materials were encountered, especially in the elevated areas of the Property as shown in Figures 2A and 2B. Borings in the fill areas encountered red brick; no signs of other types of building debris or materials, which may contain asbestos, were noted.

As discussed above, there were no indications in the laboratory results from soil samples of elevated concentrations of VOCs, hydrocarbons, or organochlorine pesticides in fill areas. However, as previously discussed, lead and arsenic were detected in fill soils at concentrations that may be a potential risk to human health, or require special consideration (i.e., additional testing and characterization) prior to removal and/or disposal.

Former 500-gallon Kerosene UST – This UST was removed in July 1988 from the northeastern corner of the Property. One under-tank soil sample collected at that time contained 16,000 parts per million of hydrocarbons. Although no evidence of remediation was available, this UST received a “no further action” letter on March 25, 1999 from the City of Long Beach Environmental Health Underground Tank Program.

During the present investigation, kerosene-related hydrocarbons were detected in soils from the 10-foot depth in this area. The Los Angeles Regional Water Quality Control Board (RWQCB) has established cleanup guidelines, also known as soil screening levels (SSLs), for hydrocarbon-impacted soils based on the potential for groundwater contamination. Where groundwater is anticipated at less than 20 feet bgs (groundwater is at about 10 feet bgs at the Property), the SSLs are 100 mg/kg for hydrocarbons in the gasoline or C₄-C₁₂ range, 100 mg/kg for hydrocarbons in the diesel or C₁₃-C₂₂ range, and 1,000 mg/kg for hydrocarbons in the heavy or C₂₃-C₃₂ range. The concentrations of TPH-g (760 to 4,000 mg/kg) and TPH-d (465 to 2,570 mg/kg) in the 10-foot samples from borings B24 through B26 are above the RWQCB’s SSLs.

The VOCs detected in these same samples (n-propylbenzene, sec-butylbenzene, naphthalene, etc.) are consistent with a release of kerosene in this area. In addition, naphthalene was detected in one sample (B26-10’ at 15,000 mg/kg) at a concentration above its industrial PRG of 4,200 mg/kg.

A groundwater sample collected from boring B25, which appeared to be located in a “worst-case” area near the former UST, did not contain detectable concentrations of VOCs. Traces of TPH-g and TPH-d were detected in the groundwater samples collected from this boring. There are no regulatory limits with respect to various fractions of hydrocarbons in groundwater. Based on our experience with similar sites, the traces of TPH-g and TPH-d detected in groundwater would not warrant remediation by regulatory agencies.

The former kerosene UST has received a “no further action” letter from the City of Long Beach. Although some soil samples were found contain petroleum hydrocarbons above generally applicable regulatory standards, the data from this investigation indicates that there has been no significant impact to groundwater, and there is no significant threat of an impact to groundwater. However, any future redevelopment in this area may encounter hydrocarbon-impacted soils. As a part of the redevelopment, it may be prudent to remove the impacted soil when access is available.

Historic Operations – Releases of waste oils, various pesticides, chemicals, paint and solvents, may have resulted from historical operations on the Property, where chemicals were used and stored. As discussed in this report, impacted soils were identified in the areas of the former kerosene UST, fill soils, streetlight crushing area, and car wash clarifier. None of the other areas – including the various chemical storage areas, paint shop, chemical lab, and machine shop – appear to have resulted in any significant environmental impact to the Property.

Streetlight Bulb Crushing/Disposal Areas – A streetlight bulb crushing/disposal operations were conducted in two areas of the Property. Soil testing for metals in the one-foot samples from B2, B3, and B13 was conducted to assess the potential for contamination from these operations. Metals concentrations in B3 and B13 appeared to be typical of California soils.

The analytical results for boring B2 show concentrations of barium, zinc and lead above typical background levels; additional investigation of the area of this boring may be warranted prior to excavation and/or removal of soil.

Current Gasoline and Diesel USTs – Soil gas samples (SG6 through SG9) collected and analyzed from around the current gasoline and diesel USTs did not detect any concentrations of fuel-related constituents. Based on these results, there is no evidence of significant impact to the Property from these current USTs. Further investigation is not recommended at this time.

Clarifiers – Soil gas and bulk soil samples were collected in the areas of the paint disposal and car wash clarifiers. VOCs were not detected in soil (B4-10’) and soil gas samples (SG3) collected and analyzed from the area of the paint clarifier. Based on these results, no significant environmental impact to the Property is anticipated from the Paint Clarifier.

Soil gas samples (SG4 through SG6) in the area of the car wash clarifier did not contain detectable concentrations of VOCs. A soil sample from five feet bgs in boring B5 did not contain detectable concentrations of TPH. However, sample B5-5’ contained elevated

concentrations of metals, including arsenic, chromium, copper, lead, nickel and zinc. The car wash area, including the clarifier, appears to have been renovated in the last several years. The source of the metals in soil is unknown; they may be related to historic operations in this area, or to fill soils (the area is topographically elevated with respect to the area to the east).

Additional investigation and remediation for metals is recommended prior to any redevelopment of this area of the Property.

Groundwater Monitoring Wells – Three groundwater monitoring wells reportedly installed on or adjacent to the Property could not be located, and are presumed to have been appropriately destroyed. No further investigation with respect to these wells is recommended.

**PHASE II INVESTIGATION REPORT
LONG BEACH PUBLIC SERVICE YARD
1601 SAN FRANCISCO AVENUE
LONG BEACH, CALIFORNIA 90802**

INTRODUCTION

SCS Engineers (SCS) was retained by Overland, Pacific and Cutler, Inc. (OPC) on behalf of the City Attorney of the City of Long Beach to conduct a Phase II investigation of the Long Beach Public Service Yard site located at 1601 San Francisco Avenue in Long Beach, California (the "Property"). A map showing the location of the Property is provided as Figure 1 of Appendix A.

The purpose of this investigation was to assess the potential for contamination to exist on the Property based on the environmental concerns identified in the Phase I Environmental Assessment report dated February 22, 2005, completed by SCS. It is our understanding that portions of the Property may be considered for non-residential (i.e., industrial) redevelopment.

Background

The SCS Phase I Environmental Assessment identified the following recognized environmental conditions (RECs) for the Property:

- City personnel indicated that fill material was placed on the western raised portions of the Property; the exact date of deposition and the source of this material is unknown, but reportedly may include debris from the 1933 earthquake. Building debris from 1933 may contain asbestos, lead-based paint, or other substances of potential environmental concern.
- A 500-gallon kerosene underground storage tank (UST) was removed in July 1988 near the southwest corner of San Francisco Avenue and Esther Street. One undertank soil sample contained 16,000 parts per million of hydrocarbons. Although no evidence of remediation was available, this UST received a "no further action" letter on March 25, 1999 from the City of Long Beach Environmental Health Underground Tank Program
- Releases of waste oils, various pesticides, chemicals, paint and solvents, may have resulted from historical operations on the Property, where chemicals were used and stored. The locations and nature of these operations, including a paint shop, a chemical laboratory, a machine shop, etc., appear to be transitory, and it is possible that spills and leaks have occurred in various locations over the 70 plus years that the Public Service Yard has been in operation.
- A streetlight bulb crushing/disposal operation, wherein water was used to suppress dust generated during the crushing of lights within a dumpster, was conducted on the Property.

- Current gasoline and diesel USTs are located on the Property.
- Paint disposal and car wash clarifiers are located on the Property.
- Permits for two groundwater monitoring wells for Los Angeles County, and one well for Long Beach Public Works, were identified for the Property or immediate surrounding area in 1994 and 1995. The status of these wells is unknown.

It should be noted that the Phase I Assessment identified an open leaking UST case for the Property. This case is associated with a former 550-gallon gasoline UST, reportedly located at the City Tow Yard at 901 West Anaheim Street. This UST was removed in 1995 from a location in the 14th Street right-of-way, immediately north of the City Tow Yard at 901 Anaheim Street. Soil and groundwater impacts were confirmed in investigations of the area. The Los Angeles Regional Water Quality Control Board is the lead regulatory agency for this project. SCS conducted a separate investigation of this area. The results of the UST soil and groundwater investigation will be submitted in a separate report.

GEOLOGY AND HYDROGEOLOGY

Physiographic Setting

According to the U.S. Geological Survey (USGS), Long Beach (1964, photorevised 1981), California 7.5 minute topographic map, the Property is located immediately east of the Los Angeles River at an elevation of approximately five feet above mean sea level and about 1.3 miles north of San Pedro Bay. Regional topography is relatively flat with a gentle slope to the west.

Geology and Soils

Geologic maps indicate that surface sediments in the area are Quaternary alluvium and coastal deposits of silt, sand, and gravel that are underlain by the late Pleistocene Lakewood Formation. The Lakewood Formation, which consists of gravel, sand, sandy silt, silt and clay with shale pebbles, extends to a depth of approximately 100 feet (California DWR, Bulletin No.104). Sediments below the Lakewood Formation belong to the late Pleistocene San Pedro Formation.

Groundwater

The Property is located in the southern portion of the West Coast Groundwater Basin. The first groundwater aquifer in the region is within the Gage Aquifer within the Lakewood Formation. First groundwater in the vicinity of the Property is approximately 10 feet below grade (DWR, June 1961). There are no known regional groundwater contamination problems in this area. However, shallow groundwater has locally been impacted by saltwater intrusion; therefore, it is not used as a drinking water source. Groundwater flow direction is anticipated to be generally

westerly towards the Los Angeles River/Flood Control Channel adjacent to the Property. Groundwater beneath the Property is likely tidally influenced in this area.

SITE INVESTIGATION

The scope of work for the investigation included the collection and analysis of 30 soil vapor samples to assess the presence of volatile organic compounds (VOCs). In addition, 26 exploratory borings were drilled to depths ranging from one to ten feet below ground surface (bgs). Soil samples were collected and selectively analyzed for total petroleum hydrocarbons, heavy metals, organochlorine pesticides, and VOCs. One groundwater sample was collected from the area of the former 500-gallon kerosene UST, in the northeastern corner of the Property, at a depth of approximately 12 feet bgs and analyzed for fuel-related constituents. Access to the Property was provided by Mr. Greg Berg (562/570-2719) of the City of Long Beach.

Prior to drilling, a geophysical survey was conducted by Goldak of Glendale, California, to screen the areas of concern for underground utilities and clear the 56 proposed boring locations. On June 13, 2005, Goldak screened the potential boring locations using equipment capable of detecting metallic objects, magnetic anomalies, and electric power cables. The groundwater monitoring wells reportedly installed on or adjacent to the Property could not be located, and are presumed to have been appropriately destroyed.

During the geophysical survey, site personnel noted that street light crushing operations were not conducted near the northeastern corner of the Property as identified in the Phase I Assessment. Two alternative street light crushing locations were identified: 1) an area in the 14th Street right-of-way adjacent to San Francisco Avenue (borings B2 and B3), and 2) near a dumpster in the central portion of the Property (boring B13).

Soil, soil vapor, and groundwater sampling activities were conducted on June 20 and 21, 2005, using protocols described in the following narrative.

Soil Vapor Collection

H&P Mobile Geochemistry (H&P) of Solana Beach, California, conducted soil vapor sampling activities on June 20 and 21, 2005. Soil vapor samples were collected at depths of 5 feet bgs in 30 locations. Samples were designated SG-1 through SG-30. A map of the Property showing the area of investigation and sampling locations is provided as Figures 2A and 2B. The soil vapor samples were collected, using a direct-push drill rig or hand-operated equipment, from areas of concern identified in the Phase I Assessment, and as modified in the field based on accessibility and on information provided by site personnel. A state-certified, on-site mobile laboratory provided by H&P was used to analyze soil vapor samples for VOCs in the field.

Soil and Groundwater Sample Collection

H&P also used a direct-push Strataprobe rig to collect soil samples and one groundwater sample from 26 borings on June 20 and 21, 2005. Soil borings, designated B-1 through B-26 as shown

in Figure 2, were drilled in areas of environmental concern based on current and historical uses of the Property (previously discussed). In addition, one groundwater sample was collected from boring B-25 in the area of the former 500-gallon kerosene UST.

Soil samples were collected at 1-, 5-, and/or 10-foot depths from each boring. Samples were selected for laboratory analysis based on indications of contamination such as odors or discoloration, and to provide analytical results representative of the areas of concern. Sediments encountered during drilling generally consisted of gray, green or brown silt and sand. Groundwater was encountered at approximately 10 feet bgs in several borings. The only obvious signs of hydrocarbon contamination (odors and discolored soils) were encountered in the 10-foot samples from borings (B24 through B26) drilled in the area of the former 500-gallon kerosene UST in the northeastern corner of the Property. Signs of fill soils (generally dark gray or black well-graded sand/silt mixes, sometimes with fragments of red brick) were often encountered in the raised areas of the Property. Boring logs are provided in Appendix C.

Twenty-one samples were analyzed for total petroleum hydrocarbons (TPH) carbon-chain analysis using EPA Method 8015 modified. Twelve samples were analyzed for VOCs using EPA Method 8260B, four samples were analyzed for organochlorine pesticides using EPA Method 8081A, and 18 samples were analyzed for 17 heavy metals (California Title 22 metals). The samples were submitted to a state-certified laboratory for analysis.

Materials and Methods

Soil Vapor Sampling

Soil vapor equipment consisted of hollow steel probes, which were driven into subsurface soils to the desired depth of five feet bgs using either the Strataprobe direct-push drill rig or a Roto-hammer operated by hand. Soil vapor samples were recovered by slightly retracting the probe and exposing sampling ports on the drive point. Vapor samples were extracted with a syringe via a Nylaflow tube attached to the drive tip. Prior to sampling, the tubing was purged to remove ambient air from the sampling system and to ensure that the collected vapor sample represented conditions in the soil. Clean Nylaflow tubing was utilized for each sample. Duplicate samples, calibration standards, and sample blanks were used to provide Quality Assurance/Quality Control (QA/QC) data. Immediately following sample collection, the samples were analyzed for VOCs by the state-certified, on-site mobile laboratory provided by H&P.

Soil Sampling

Bulk soil samples were obtained using a Strataprobe equipped with a hydraulic hammer and a two foot long, 2-inch diameter split-spoon sampler. A pointed steel tip was fixed to the head of the split-spoon sampler and driven to the desired depth on a steel rod. Samples were collected by retracting the drive tip through the center of the sample with an inner rod, and hydraulically hammering the sampler an additional two feet.

Soil samples from each boring were recovered in two-foot long, pre-cleaned plastic acetate sleeves. An approximately 6- to 12-inch section was cut from the sample sleeve and retained for laboratory analysis. Immediately following soil sample collection, both ends of each acetate sample sleeve were covered with Teflon squares, capped with plastic end caps, and sealed with solvent-free polyethylene tape. A solvent-free label noting the date of collection, sample number, and project number was affixed to each sample. Immediately following labeling, samples were placed in a chilled cooler for later transport to Advanced Technology Laboratories (ATL) of Signal Hill, California for analysis. Soil samples were tracked from point of collection through the laboratory using standard chain-of-custody protocols.

Soil samples designated for analysis of VOCs were prepared in the field using EPA Method 5035, which includes the collection of three 5-gram aliquots of soil from each soil sample using a plunger/sub-sampler provided by the laboratory. The three aliquots of soil were immediately placed in 40 milliliter VOA (volatile organic analysis) vials as follows: two aliquots in VOAs with a sodium bisulfate preservative, and one in a methanol preservative.

Groundwater Sampling

One groundwater sample was collected from boring B-25 at a depth of approximately 12 feet bgs. A temporary 1-inch diameter PVC well casing was installed in the open borehole. A pre-cleaned steel bailer was used to collect samples for VOC analysis. To minimize the potential loss of VOCs, groundwater samples for VOC and TPH-g analyses were slowly and carefully poured from the bailer into 40-milliliter glass VOA vials with hydrochloric acid preservative. The VOAs were quickly capped and checked to ensure that no air bubbles were present.

Backfill of Borings – The soil vapor, soil and groundwater sample locations were all backfilled with granular bentonite, hydrated, and the surface completed with asphalt or concrete to match the surrounding surface.

ANALYTICAL RESULTS

Soil Vapor Results

Thirty soil vapor samples were analyzed for VOCs. The soil vapor laboratory report from H&P is provided as Appendix A.

As shown in Table 1, only four of the 30 vapor samples contained detectable concentrations of VOCs. Sample SG-12 contained 1,1,1-trichloroethane (1,1,1 TCA) at a concentration of 2.6 micrograms per liter ($\mu\text{g/L}$), and three soil vapor samples (SG-22, SG-23, and SG-24) contained concentrations of tetrachloroethene (PCE) ranging from 1.7 to 5.9 $\mu\text{g/L}$.

Bulk Soil Results

ATL laboratory reports for soil samples are provided in Appendix B. Samples were analyzed by ATL for TPH, VOCs, organochlorine pesticides, and Title 22 metals. A summary of the analytical results is provided below and in Tables 2 and 3.

Hydrocarbons – Twenty-two soils samples were analyzed for TPH with hydrocarbon chain breakdown. A summary of the analytical results is provided in Table 2. Petroleum hydrocarbons were not detected in 16 of the 22 samples.

Low concentrations of diesel (TPH-d [C₁₃-C₂₂], up to 12 milligrams/kilogram (mg/kg), and heavy-range hydrocarbons (TPH-h [C₂₃-C₄₀]), up to 180 mg/kg, were detected in three samples: B9-1' (boring B9 at 1-foot), B12-5', and B19-1'.

Higher concentrations of TPH were detected in the 10-foot samples from borings B24, B25, and B26, which were drilled in the area of the former kerosene UST. Sample B25-10' had concentrations of gasoline range hydrocarbons (TPH-g, C₄-C₁₂) and TPH-d of 760 and 465 mg/kg, respectively. Sample B24-10' had TPH-g and TPH-d concentrations of 3,090 and 2,140 mg/kg, respectively. Sample B26-10' had TPH-g and TPH-d concentrations of 4,000 and 2,570 mg/kg, respectively. Samples B24-10' and B25-10' also contained TPH-h of 58 and 13, respectively.

VOCs – Thirteen soil samples were analyzed for VOCs. A summary of the analytical results for VOCs is provided in Table 2. VOCs were not detected in nine of the 13 samples analyzed. Two VOCs were detected in sample B8-5', specifically 1,1,1-TCA at 4.9 micrograms per kilogram (µg/kg), and dibromochloromethane at 4.3 µg/kg.

VOCs were also detected in the 10-foot samples from borings B24, B25, and B26, drilled in the area of the former kerosene UST. Two VOCs were detected in sample B24-10', n-propylbenzene at 310 µg/kg and sec-butylbenzene at 1,000 µg/kg. Four VOCs, n-propylbenzene, sec-butylbenzene, isopropylbenzene, and naphthalene, were detected in sample B25-10' at concentrations of 1,300, 1,300, 520, and 2,500 µg/kg, respectively, and in sample B26-10' at concentrations of 17,000, 12,000, 8,200, and 15,000 µg/kg, respectively. Sample B26-10' also contained tert-butylbenzene at a concentration of 630 µg/kg.

Metals – Eighteen soil samples were analyzed for Title 22 heavy metals. Table 3 provides a summary of the analytical results for metals, typical background levels in California soils, and various regulatory limits that may be applicable. As shown in Table 3, most of the samples have metals concentrations within the typical range for California soils.

However, samples with concentrations of lead (990 to 2,400 mg/kg) above generally accepted guidance levels (the US EPA Preliminary Remediation Goal [PRG] for industrial soils) were collected from the following areas:

- B5-5' – From the car wash area

- B12-1' – From the parking lot/suspected fill area
- B14-5' and B14-10' – From the parking lot/suspected fill area

With the exception of sample B5-5', these samples also contained other metals (barium, cadmium, copper, chromium, nickel and/or zinc) at concentrations above typical background levels but below industrial PRGs. Sample B5-5' contained arsenic at 110 mg/kg, which is above generally accepted cleanup concentrations of 8 to 12 mg/kg.

Organochlorine Pesticides – The one and five-foot samples from borings B15 and B16 – drilled in the area of the pesticide storage shed – were analyzed for organochlorine pesticides using EPA Method 8081A. No organochlorine pesticides were detected in these samples.

Groundwater Results

Sample B25-GW was analyzed for TPH-g and TPH-d using EPA Method 8015 modified, and for VOCs using EPA Method 8260B. As shown at the bottom of Table 2, this sample did not contain detectable concentrations of VOCs. Gasoline and diesel range TPH were detected in this sample at 2.34 and 2.59 mg/L (milligrams per liter, equivalent to parts per million), respectively.

CONCLUSIONS AND RECOMMENDATIONS

The findings and conclusion of this report are presented in two approaches, 1) based on the chemicals of potential concern and 2) based on previously identified recognized environmental conditions.

Chemicals of Potential Concern

Hydrocarbons – With the exception of the former kerosene UST area, no obvious signs of hydrocarbon-impacted soil were noted during the field investigation. Excluding the kerosene UST area, 15 soil samples were analyzed from representative areas of the Property. As shown in Table 2, none of these samples contained concentrations of petroleum hydrocarbons above the Los Angeles Regional Water Quality Control Board's (RWQCB) Soil Screening Levels (SSLs).

Kerosene-related hydrocarbons (TPH-g and TPH-d) were detected in the three 10-foot soil samples collected from the borings B24 through B26. TPH and VOC impacts in the area of the former kerosene UST are discussed in the section on recognized environmental conditions below.

VOCs – Thirty soil vapor samples and 13 bulk soil samples were collected and analyzed from areas of potential environmental concern identified on the Property. With the exception of samples from the former 500-gallon kerosene UST area, only trace concentrations of 1,1,1 TCA, PCE, and/or dibromochloromethane were detected in soil vapor or bulk soil samples. Based on our experience with similar sites, concentrations of VOCs in this range are generally not of concern to regulatory agencies, and are not considered a recognized environmental condition for the Property.

Petroleum-related VOCs were detected in the three 10-foot soil samples collected from borings B24 through B26. TPH and VOC impacts in the area of the former kerosene UST are discussed in the section on recognized environmental conditions below.

Metals – Eighteen samples were analyzed from representative areas of the Property as shown in Table 3. The analytical results from these samples can be compared with:

- Health risk based standards: that is, the PRGs
- California waste disposal standards: the Total Threshold Limit Concentrations (TTLCs) and Soluble Threshold Limit Concentrations (STLCs) as defined in Title 22 of the California Code of Regulations
- Federal waste disposal standards: the Toxicity Characteristic Leaching Procedure (TCLP) as identified in the Code of Federal Regulations

Health Risk Standards – Using these criteria, and as shown in Table 3, lead exceeds the industrial PRG for soils in the following areas:

- B5-5' – Car wash area
- B12-1' – Parking lot/suspected fill area
- B14-5' and B14-10' – Parking lot/suspected fill area

And arsenic exceeds the industrial PRG in the following area:

- B5-5' – Car wash area

Soils from these areas should be considered a potential health risk if disturbed in the future.

Waste Disposal Criteria – With regarding to waste disposal criteria, there are three samples (from B5 and B14) shown in Table 3 with concentrations of lead above the TTLC of 1,000 mg/kg. Soils with concentrations detected in these samples would be considered hazardous for the purposes of disposal under California regulations if removal is considered in the future.

Total metals concentrations, which exceed ten times their respective STLC values, may, upon laboratory analysis for the soluble fraction, be found to exceed the STLC and therefore the soils may be considered hazardous for the purposes of disposal under California regulations. Based on sample results for B2-1', B5-5', B9-1', B10-1', B12-1', B14-5', B14-10', and B19-1' soils in these areas may (upon further laboratory analysis) contain one or more metals at concentrations that would classify them as hazardous for the purposes of disposal under California regulations.

Further, metals concentrations, which exceed twenty times their respective TCLP values, may, upon laboratory analysis for the soluble fraction, be found to exceed the TCLP and therefore be

considered hazardous for the purposes of disposal under Federal regulations. Based on samples B2-1' and B5-5' soils in these areas may (upon further laboratory analysis) contain one or more metals at concentrations that would classify these soils as hazardous for the purposes of disposal under Federal regulations.

If soils are excavated from these areas, they should be tested in order to determine appropriate disposal options/requirements.

Organochlorine Pesticides – No organochlorine pesticides were detected in the samples analyzed. Based on these results, no impact to the Property is anticipated from organochlorine pesticides.

Recognized Environmental Conditions

As previously discussed, the Phase I Environmental Assessment identified the following recognized environmental conditions for the Property:

Fill Material – Debris from the 1933 earthquake may have been placed on the western portion of the Property. This material may contain asbestos, lead-based paint, or other substances of potential environmental concern. Known and suspected fill materials were encountered, especially in the elevated areas of the Property as shown in Figures 2A and 2B. Borings in the fill areas encountered red brick; no signs of other types of building debris or materials, which may contain asbestos, were noted.

As discussed above, there were no indications in the laboratory results from soil samples of elevated concentrations of VOCs, hydrocarbons, or organochlorine pesticides in fill areas. However, as previously discussed, lead and arsenic were detected in fill soils at concentrations that may be a potential risk to human health, or require special consideration (i.e., additional testing and characterization) prior to removal and/or disposal.

Former 500-gallon Kerosene UST – This UST was removed in July 1988 from the northeastern corner of the Property. One under-tank soil sample collected at that time contained 16,000 parts per million of hydrocarbons. Although no evidence of remediation was available, this UST received a “no further action” letter on March 25, 1999 from the City of Long Beach Environmental Health Underground Tank Program.

During the present investigation, kerosene-related hydrocarbons were detected in soils from the 10-foot depth in this area. The Los Angeles Regional Water Quality Control Board (RWQCB) has established cleanup guidelines, also known as soil screening levels (SSLs), for hydrocarbon-impacted soils based on the potential for groundwater contamination. Where groundwater is anticipated at less than 20 feet bgs (groundwater is at about 10 feet bgs at the Property), the SSLs are 100 mg/kg for hydrocarbons in the gasoline or C₄-C₁₂ range, 100 mg/kg for hydrocarbons in the diesel or C₁₃-C₂₂ range, and 1,000 mg/kg for hydrocarbons in the heavy or C₂₃-C₃₂ range. The concentrations of TPH-g (760 to 4,000 mg/kg) and TPH-d (465 to 2,570 mg/kg) in the 10-foot samples from borings B24 through B26 are above the RWQCB's SSLs.

The VOCs detected in these same samples (n-propylbenzene, sec-butylbenzene, naphthalene, etc.) are consistent with a release of kerosene in this area. In addition, naphthalene was detected in one sample (B26-10' at 15,000 mg/kg) at a concentration above its industrial PRG of 4,200 mg/kg.

A groundwater sample collected from boring B25, which appeared to be located in a “worst-case” area near the former UST, did not contain detectable concentrations of VOCs. Traces of TPH-g and TPH-d were detected in the groundwater samples collected from this boring. There are no regulatory limits with respect to various fractions of hydrocarbons in groundwater. Based on our experience with similar sites, the traces of TPH-g and TPH-d detected in groundwater would not warrant remediation by regulatory agencies.

The former kerosene UST has received a “no further action” letter from the City of Long Beach. Although some soil samples were found contain petroleum hydrocarbons above generally applicable regulatory standards, the data from this investigation indicates that there has been no significant impact to groundwater, and there is no significant threat of an impact to groundwater. However, any future redevelopment in this area may encounter hydrocarbon-impacted soils. As a part of the redevelopment, it may be prudent to remove the impacted soil when access is available.

Historic Operations – Releases of waste oils, various pesticides, chemicals, paint and solvents, may have resulted from historical operations on the Property, where chemicals were used and stored. As discussed in this report, impacted soils were identified in the areas of the former kerosene UST, fill soils, streetlight crushing area, and car wash clarifier. None of the other areas – including the various chemical storage areas, paint shop, chemical lab, and machine shop – appear to have resulted in any significant environmental impact to the Property.

Streetlight Bulb Crushing/Disposal Areas – A streetlight bulb crushing/disposal operations were conducted in two areas of the Property. Soil testing for metals in the one-foot samples from B2, B3, and B13 was conducted to assess the potential for contamination from these operations. Metals concentrations in B3 and B13 appeared to be typical of California soils.

The analytical results for boring B2 show concentrations of barium, zinc and lead above typical background levels; additional investigation of the area of this boring may be warranted prior to excavation and/or removal of soil.

Current Gasoline and Diesel USTs – Soil gas samples (SG6 through SG9) collected and analyzed from around the current gasoline and diesel USTs did not detect any concentrations of fuel-related constituents. Based on these results, there is no evidence of significant impact to the Property from these current USTs. Further investigation is not recommended at this time.

Clarifiers – Soil gas and bulk soil samples were collected in the areas of the paint disposal and car wash clarifiers. VOCs were not detected in soil (B4-10') and soil gas samples (SG3)

collected and analyzed from the area of the paint clarifier. Based on these results, no significant environmental impact to the Property is anticipated from the Paint Clarifier.

Soil gas samples (SG4 through SG6) in the area of the car wash clarifier did not contain detectable concentrations of VOCs. A soil sample from five feet bgs in boring B5 did not contain detectable concentrations of TPH. However, sample B5-5' contained elevated concentrations of metals, including arsenic, chromium, copper, lead, nickel and zinc. The car wash area, including the clarifier, appears to have been renovated in the last several years. The source of the metals in soil is unknown; they may be related to historic operations in this area, or to fill soils (the area is topographically elevated with respect to the area to the east).

Additional investigation and remediation for metals is recommended prior to any redevelopment of this area of the Property.

Groundwater Monitoring Wells – Three groundwater monitoring wells reportedly installed on or adjacent to the Property could not be located, and are presumed to have been appropriately destroyed. No further investigation with respect to these wells is recommended.

Notes:

- 1) bgs = below ground surface
- 2) * Bradford, G.R., Chang, A.C., Page, A.L., Bakhtar, D., Fampton, J.A., and Wright, H., 1996, *Background Concentrations of Trace and Major Elements in California Soils*, Kearney Foundation of Soil Science Special Report, Division of Agriculture and Natural Resources, University of California.
- 3) ** - Values in milligrams per liter (mg/L)
- 4) ± - Value for total chromium (assumes 1:6 ratio of Cr VI:Cr III)
- 5) Residential PRG = US EPA Region 9 or California-modified (where available) Preliminary Remediation Goal for Residential Soils, October 2004 (<http://www.epa.gov/region09/waste/sfund/prg/files/04prgtable.pdf>).
- 6) Industrial PRG = US EPA Region 9 or California-modified (where available) Preliminary Remediation Goal for Industrial Soils, October 2004 (<http://www.epa.gov/region09/waste/sfund/prg/files/04prgtable.pdf>).
- 7) TTLIC = Total Threshold Limit Concentration as identified in Title 22 of the California Code of Regulations. Wastes with concentrations above this value are considered hazardous for the purposes of disposal under California regulations.
- 8) STLC = Soluble Threshold Limit Concentration, in mg/L, as identified in Title 22 of the California Code of Regulations. A concentration of ten times the STLC is sometimes used as a trigger to conduct further analysis (i.e., the soluble analysis) of a sample to determine disposal requirements. Wastes with soluble concentrations above this value are considered hazardous for the purposes of disposal under California regulations.
- 9) TCLP = Toxicity Characteristic Leaching Procedure concentration, in mg/L, as identified in the Code of Federal Regulations. Wastes with soluble concentrations above this value are considered hazardous for the purposes of disposal under federal regulations.

APPENDIX A

**H&P MOBILE GEOCHEMISTRY LABORATORY REPORT
FOR SOIL VAPOR SAMPLES**

29 June 2005

Mr. Kevin Green
SCS Engineers Environmental Consultants
3900 Kilroy Airport Way, Suite 100
Long Beach, CA 90806-6816
RE: SCS062005-SB2

Enclosed are the results of analyses for samples received by the laboratory on 6/20/2005 -6/21/2005 . If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in cursive script that reads "Debby Slama" followed by "for" on a new line.

Tamara Davis
Laboratory Director

H&P Mobile Geochemistry mobile labs operate under CA Environmental Lab Accreditation Program Numbers 1561, 2088, 2278 and 2530.

**ADVANCED TECHNOLOGY LABORATORIES REPORTS
FOR SOIL SAMPLES**

July 01, 2005

Kevin Green
SCS Engineers
3900 Kilroy Airport Way, Suite 100
Long Beach, CA 90806-6816

ELAP No.: 1838
NELAP No.: 02107CA
CSDLAC No.: 10196

TEL: (562) 426-9544
FAX: (562) 427-0805

Workorder No.: 077298

RE: Long Beach Public Service Yard, 01204007.02

Attention: Kevin Green

Enclosed are the results for sample(s) received on June 22, 2005 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (562)989-4045 if I can be of further assistance to your company.

Sincerely,

Eddie F. Rodriguez
Laboratory Director

The cover letter is an integral part of this analytical report. This Laboratory Report cannot be reproduced in part or in its entirety without written permission from the client and Advanced Technology Laboratories.

RE: LB Public Service Yard, 01204007.02

Attention: Kevin Green

Enclosed are the results for sample(s) received on June 22, 2005 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (562)989-4045 if I can be of further assistance to your company.

Sincerely,

Eddie F. Rodriguez
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and cannot be reproduced in part or in its entirety without written permission from the client and Advanced Technology Laboratories.

Lab Order: 077299

CASE NARRATIVE

All volatile analyses were performed using 5035 preservation requirements except for the following samples: B5-5', B14-5', B14-10', B19-1, B21-5, B22-1, B22-5, B23-1 and B9-1. Any high level dilutions were performed on a preserved methanol sample unless otherwise noted.

To: Aguila, Carmen
Subject: Analyses for Long Beach Service Yard Project

Carmen,

Per our telephone discussion of a few minutes ago, please analyze sample B14-1 for Title 22 metals. Disregard the Chain of Custody where the "archive" column was marked.

Thank you – Kevin

LIMITATIONS/DISCLAIMER

This report has been prepared specifically for Overland, Pacific & Cutler, Inc., on behalf of the City Attorney of the City of Long Beach, with application to assessing potential soil and groundwater impacts in the vicinity of a former underground storage tank located at the former Long Beach City Tow Yard, 901 West Anaheim, Long Beach, California. This report has been prepared in accordance with the care and skill generally exercised by reputable professionals, under similar circumstances, in this or similar localities. No other warranty, expressed or implied, is made as to the professional opinions presented herein. No other party, known or unknown to SCS is intended as a beneficiary of this work product, its content or information embedded therein. Third parties use this report at their own risk.

Changes in site use and conditions may occur due to variations in rainfall, temperature, water usage, economic, or other factors. It is possible that additional information exists beyond the scope of this investigation. Additional information that was not available to the consultant at the time of this investigation or changes that may occur on the site or in the surrounding area may result in modification to the site that would impact the summary and recommendations presented herein. This report is not a legal opinion.

**GROUNDWATER INVESTIGATION REPORT
FORMER LONG BEACH CITY TOW YARD
901 WEST ANAHEIM
(APN 7271-007-902)
LONG BEACH, CALIFORNIA
(LARWQCB NO. 908130498)**

INTRODUCTION

SCS Engineers (SCS) was retained by Overland, Pacific & Cutler, Inc., on behalf of the City Attorney of the City of Long Beach, to conduct soil and groundwater investigation activities in the vicinity of a former underground storage tank (UST) located within the former 14th Street right-of-way immediately north of the former Long Beach City Tow Yard at 901 West Anaheim in Long Beach, California (the "Property"). A map showing the project site location is provided as Figure 1; a map of the project site showing the location of the former UST is provided as Figure 2. Petroleum hydrocarbon-impacted soils were identified in this area during previous investigations.

This current investigation was conducted in accordance with a workplan prepared by The Reynolds Group (TRG), which was approved by the Los Angeles Regional Quality Control Board (RWQCB) in a letter dated February 19, 2002.

BACKGROUND

A *Workplan to Advance Geoprobes and Install Groundwater Monitoring Wells* prepared by TRG, dated November 15, 2001 and submitted to the Los Angeles Regional Water Quality Control Board (RWQCB), was reviewed by SCS as a part of an environmental assessment for this city of Long Beach. The workplan indicated that a 550-gallon underground storage tank (UST) that reportedly contained gasoline, and associated piping were removed from the Property on August 30, 1995. According to TRG, an *Underground Storage Tank Closure Report*, dated November 2, 1995, prepared by Maness Environmental Service, Inc., indicated that two soil samples were collected during the tank removal: one from below the UST excavation and one from a stockpile. Based on data tabulated in the TRG report, laboratory analytical results indicated that gasoline-range organics at a concentration of 7,500 mg/kg (mg/kg or parts per million [ppm]) were detected in soils beneath the UST. Groundwater was reportedly encountered at 8 to 10 feet below ground surface (bgs) during the tank excavation.

According to the TRG workplan a *Final Site Characterization Report for the Phase II Environmental Assessment of Gasoline-Impacted Soils by Epics International* was prepared by Epics International and indicated that six soil borings (B1-B6; labeled as TRGB1 Through TRGB6 on maps and tables [Figures 2]) were advanced to depths ranging from five to thirteen feet bgs in the area surrounding the former UST. Reportedly, thirteen soil samples (two from each boring - one shallow and one deep - plus a third from B2), and five groundwater samples (from

the ten-foot depth of each boring except for B4), were collected and analyzed. Three additional soil samples were collected: One from each of the north and south sidewalls of the excavation at a depth of six feet bgs, and one from under the center of the excavation at a depth of 10 feet bgs.

Laboratory analyses from the Epics International investigation reportedly detected gasoline-range organics (TPH-g, C₄-C₁₂) and diesel-range organics (TPH-d, C₁₃-C₂₂) in soil (concentrations up to 5,500 mg/kg for TPH-g, and 530 mg/kg for TPH-d) and groundwater (concentrations up to 3,400 milligrams per liter [mg/L] for TPH-g, and 600 mg/L for TPH-d). As reported in the TRG workplan, benzene, toluene, ethyl benzene, and xylenes (BTEX) were also detected in soils at concentrations up to 27, 48, 110, and 540 mg/kg, respectively. Additionally, BTEX was detected in groundwater with concentrations up to 18, 42.4, 108, and 703 mg/L, respectively. The highest concentrations of TPH-g, TPH-d and BTEX in soils were found at the B5 location. The highest concentrations of TPH-g, TPH-d, ethyl benzene, and xylenes in groundwater were found at the B1 location; and the highest concentrations of benzene and toluene in groundwater were detected at the B5 location.

TOPOGRAPHIC, GEOLOGIC, AND HYDROLOGIC INFORMATION

Physiographic Setting

According to the U.S. Geological Survey (USGS), Long Beach (1964, photorevised 1981), California 7.5 minute topographic map, the Property is located immediately east of the Los Angeles River at an elevation of approximately five feet above mean sea level, about 1.3 miles north of San Pedro Bay. Regional topography is relatively flat with a gentle slope to the west.

Geology and Soils

Geologic maps indicate that surface sediments in the area are Quaternary alluvium and coastal deposits of silt, sand, and gravel that are underlain by the late Pleistocene Lakewood Formation. The Lakewood Formation, which consists of gravel, sand, sandy silt, silt and clay with shale pebbles, extends to a depth of approximately 100 feet (California DWR, Bulletin No.104). Sediments below the Lakewood Formation belong to the late Pleistocene San Pedro Formation.

Groundwater

The Property is located in the southern portion of the West Coast Groundwater Basin. The first regional groundwater aquifer is the Gaspar, which immediately overlies the Lakewood Formation. First groundwater in the vicinity of the Property is approximately 10 feet below grade (DWR, June 1961). There are no known regional groundwater contamination problems in this area. However, shallow groundwater has locally been impacted by saltwater intrusion; therefore, it is not used as a drinking water source. Groundwater flow direction is anticipated to be generally westerly towards the Los Angeles River/Flood Control Channel adjacent to the Property. Shallow groundwater beneath the Property may be tidally influenced by the river in this area.

SITE INVESTIGATION

Soil and Groundwater investigation activities were conducted in accordance with TRG's *Workplan to Advance Geoprobes and Install Groundwater Monitoring Wells* approved by the RWQCB in a letter dated February 19, 2002. Prior to conducting investigation activities, a permit (Permit No. 1128) was issued to SCS by the City of Long Beach Department of Health and Human Services (LBDHHS). A copy of the permit is included in Appendix A.

Geophysical Survey

Prior to any subsurface sampling by SCS on June 13, 2005, Goldak of Glendale, California, conducted a geophysical survey of the former UST area; Goldak screened the boring locations using equipment capable of detecting metallic objects, magnetic anomalies, electric power cables, and other underground obstructions. No anomalies were detected at any proposed boring locations.

Soil Sample Collection and Analysis

On June 21, 2005, six borings (SCSB7 through SCSB12) were advanced to a depth of 14 feet bgs using a truck-mounted direct-push rig operated by H&P Mobile Geochemistry (H&P). As shown in Figure 2, the SCS borings were positioned in a circular fashion approximately 15 to 20 feet away from borings TRGB1 through TRGB6, in the direction leading away from the former UST.

Twelve soil samples were collected (one from the 5-foot depth and one from the 10-foot depth at each boring location) and analyzed for TPH-g using EPA Method 8015 Modified and for VOCs and oxygenates using EPA Method 5035/8260B. The samples were submitted to state-certified ATL laboratory for analysis.

Sediments encountered during drilling generally consisted of gray, greenish-gray, or brown silt, sand, and clay, or mixtures thereof. Groundwater was encountered at approximately 12 feet bgs. Obvious signs of hydrocarbon contamination (odors and discolored soils) were observed in each of the six borings. Boring logs are provided in Appendix B.

Groundwater Grab-Sample Collection and Analysis

Six groundwater grab-samples were also collected on June 21, 2005 (one from each boring location). Groundwater grab-samples were collected by H&P under SCS oversight using a stainless steel bailer. Samples were analyzed by ATL for TPH-g using EPA Method 8015M, and for VOCs and oxygenates using EPA Method 8260B.

Monitoring Well Installation, Development and Monitoring

On July 27, 2005, three groundwater monitoring wells were installed on the Property in the area of the former UST by Layne Christensen Company (Layne) of Fontana, California, under SCS

oversight. The wells were extended to a depth of 20 feet bgs and were designated MW1 through MW3 (Figure 2). During the installation, three soil samples were collected from each well location: one at 5 feet bgs, one at 9 feet bgs (approximately two feet above the water table), and one from 13 feet bgs (approximately two feet below the water table).

On July 28, 2005 the wells were developed by Layne under the oversight of SCS.

On August 10, 2005, the wells were surveyed by Dulin and Boynton Licensed Surveyors, Inc., of Signal Hill, California. Survey information is included in Appendix C.

Samples of groundwater were collected from MW1-MW3 on August 10, 2005. Samples were analyzed for TPH-g, TPH-d, and heavy-range hydrocarbons using EPA Method 8015M, and for VOCs including BTEX, methyl tertiary-butyl ether (MTBE), diisopropyl ether (DIPE), ethyl tertiary butyl ether (ETBE), and tertiary amyl methyl ether (TAME) using EPA Method 8260B.

As shown in Figure 10, the groundwater data indicates that in the area of the former UST, groundwater flow was toward the southeast. The groundwater gradient on August 10, 2005 was approximately 0.007 feet per foot of horizontal distance. Groundwater elevation data are summarized in Table 1.

Materials and Methods

Soil Sampling

Soil samples collected from borings SCSB7 through SCSB12 were obtained using a Strataprobe direct-push rig equipped with a hydraulic hammer and a two-foot long, 2-inch diameter split-spoon sampler. A pointed steel tip was fixed to the head of the split-spoon sampler and driven to the desired depth on a steel rod. Samples were collected by retracting the drive tip through the center of the sample with an inner rod, and hydraulically hammering the sampler an additional two feet. Samples from each boring were recovered in two-foot long, pre-cleaned plastic acetate sleeves. An approximately 6- to 12-inch section was cut from the sample sleeve and retained for laboratory analysis. Immediately following soil sample collection, both ends of each acetate sample sleeve were covered with Teflon squares, capped with plastic end caps, and sealed with solvent-free polyethylene tape.

Soil samples collected during the installation of groundwater monitoring wells were obtained using a CME-75 hollow-stem auger drill rig. Soil samples were collected from prescribed depths using an 18-inch long, 1.25-inch diameter split-spoon sampler on the end of a steel rod which was driven approximately 18-inches through the open center of the hollow-stem augers. The bottom-most intact sleeve was quickly retained for subsequent laboratory analysis. Following sample collection both ends of the sample sleeve were covered with a Teflon square and capped with plastic end caps then secured with non-volatile tape. Standard three stage decontamination procedures were used for all sampling equipment, including sample sleeves and samplers, between each sampling depth.

A solvent-free label noting the date of collection, sample number, and project number was affixed to each soil sample. Immediately following labeling, samples were placed in a chilled cooler for later transport to Advanced Technology Laboratories (ATL) of Signal Hill, California for analysis.

Soil samples designated for analysis of VOCs (by EPA Method 8260) were prepared in the field using EPA Method 5035, which includes the collection of three 5-gram aliquots of soil from each soil sample using a plunger/sub-sampler provided by the laboratory. The three aliquots of soil were immediately placed into 40 milliliter volatile organic analysis (VOA) vials as follows: two aliquots in VOAs with a sodium bisulfate preservative, and one in a methanol preservative.

Additional soil was collected for field observation by an SCS geologist. Soil samples used for lithologic descriptions were obtained from sample sleeves immediately adjacent to the samples collected for laboratory analysis; these samples were placed in Ziplock baggies. Additionally, each of the samples was analyzed in the field using a Photo-Ionization Detector (PID), which detects organic vapors emitted into the headspace of the Ziplock bags.

Following sample collection, borings were backfilled with bentonite chips and capped with asphalt.

Groundwater Grab-Sampling

For groundwater grab-samples collected from borings SCSB7 through SCSB12, a temporary 1-inch diameter PVC well casing was installed into each open borehole. A pre-cleaned steel bailer was used to collect samples for VOC analysis. To minimize the potential loss of VOCs, the water was slowly and carefully poured from the bailer into 40-milliliter glass VOA vials with hydrochloric acid preservative. The VOAs were quickly capped and checked to ensure that no air bubbles were present. Upon collecting each sample, a sample label was affixed to each sample container denoting sample location, date, and time, and placed into a chilled cooler for transport to ATL for analysis.

Well Installation and Groundwater Sampling of MW1, MW2, and MW3

Each of the three wells was installed to a depth of 20 feet. The wells were constructed using 4-inch diameter schedule 40 PVC, which was set within a 12-inch borhole. The PVC in the perforated zone of the well was factory slotted (0.010 inches) and extended from five feet bgs to 20 feet bgs. Filter pack (#2/16 sand) was placed around the PVC from 4 feet bgs to 20 feet bgs. A sanitary seal of hydrated medium sized bentonite chips were placed around the PVC from the surface of the well to the top of the sand. Each well was completed at the surface with a one-foot diameter steel, traffic-rated well box with a bolted lid to prevent incidental damages or liability. A well construction detail is provided in Appendix D.

For well development, each of the wells was surged for approximately 20 minutes then bailed continuously until dry; as recharge in the area is slow. The process was repeated a second time for each well.

On the day of monitoring, prior to purging for sample collection, static water levels for the wells were measured to the nearest 0.01-foot from a reference point on each well casing using a Roctest electronic water level indicator.

Wells were purged and sampled using a QED Micropurge low-volume pump at a rate of approximately 250 milliliters per minute until field parameters stabilized. During purging, temperature, conductivity, pH, and dissolved oxygen were measured using a QED flow through cell, and turbidity using a Horiba handheld field meter. Field sampling data sheets documenting field parameter measurements, groundwater purge volumes, and field comments are provided in Appendix E.

Groundwater samples were collected in 40 ml glass vials using standard sampling protocols to minimize turbulence and avoid air bubbles. Samples were labeled, and placed in a chilled ice chest and transported to American Environmental Testing Laboratory, Inc. (AETL), located in Burbank, California. In accordance with the approved workplan, groundwater samples were analyzed for total petroleum hydrocarbons using EPA Method 8015, and BTEX and fuel oxygenates using EPA Method 8260B.

Prior to any purging and between wells, the pump was thoroughly cleaned with a Liquinox solution, tap water rinsed, and finally rinsed with distilled water. A new discharge hose was dedicated to this sampling episode. All water removed from wells during sampling and development was stored on-site in sealed, labeled 55-gallon drums for later disposal.

ATL and AETL are certified by the California Department of Health Services to conduct the specified analyses. All soil and groundwater samples were tracked from the point of collection through the laboratory using standard chain-of-custody protocol.

ANALYTICAL RESULTS

Copies of the ATL and AETL laboratory reports, including quality assurance/quality control and chain-of-custody documentation, are provided in Appendices F and G, respectively. Analytical results are summarized in Tables 2 and 3.

Soil

As shown in Table 2, TPH-g was detected in eight of the 21 soil samples collected by SCS at concentrations ranging from 77 mg/kg (SCSB11) to 1,500 mg/kg (SCSB8). Figures 4 and 5 show contours for TPH-g in soil, based on the analytical results for the five-foot and ten-foot depths, respectively.

Twelve of the 21 soil samples collected had detectable concentrations of VOCs. The compound names and concentrations detected are provided in Table 2. As shown, the highest concentrations were found in the SCSB8 boring. Figures 6 and 7 show contours for benzene in soil, based on the analytical results for the five-foot and ten-foot depths, respectively.

Groundwater Grab-Samples

As shown in Table 3, low concentrations of TPH-g were detected in two of the six groundwater grab-samples collected from SCSB7-SCSB12. The concentrations of TPH-g were 6.8 and 1.1 mg/L for SCSB7 and SCSB8, respectively. Figure 8 shows contours for TPH-g in grab-samples, based on the analytical results.

Groundwater grab-samples from four of the six borings also contained detectable concentrations of VOCs, details of which are provided in Table 3. Figure 9 shows contours for benzene in grab-samples, based on the analytical results.

Groundwater Sampling of MW1, MW2, and MW3

Low concentrations of TPH-g, 0.189 and 0.024 mg/L, were detected in groundwater samples collected from monitoring wells MW1 and MW3, respectively. A map showing the well locations and TPH-g concentrations is provided as Figure 11.

Ethylbenzene and xylenes were also detected at very low concentrations in the groundwater sample from MW1, at 1.2 and 4.8 µg/L, respectively. Additionally, fuel oxygenates MTBE and TBA were detected in the groundwater sample from MW3, at 3.9 and 38.8 µg/L, respectively (Table 3).

TPH-d and heavy-range hydrocarbons were not detected in any of the groundwater samples collected from the monitoring wells.

RWQCB SOIL SCREENING LEVELS

The Los Angeles Regional Water Quality Control Board (RWQCB) has established cleanup guidelines, also known as soil screening levels (SSLs), for hydrocarbon-impacted soils based on the potential for groundwater contamination (RWQCB, 1996). Where impacted soils are anticipated less than 20 feet above groundwater (groundwater is at approximately 10 feet bgs at the Property), the SSLs for petroleum hydrocarbons are:

- TPH-g or gasoline-range hydrocarbons (C₄-C₁₂) – 100 mg/kg
- TPH-d or diesel-range hydrocarbons (C₁₃-C₂₂) – 100 mg/kg
- Oil or heavy-range hydrocarbons (C₂₃-C₄₀) – 1,000 mg/kg.

The RWQCB also provides SSLs for fuel-related aromatic compounds (BTEX - benzene, toluene, ethylbenzene, and xylenes) in soils. Since impacted soils are in contact with

groundwater, the lowest SSLs would be applicable. The SSLs for BTEX constituents in soil at the Property would be as follows:

- Benzene – 0.011 mg/kg
- Toluene – 0.15 mg/kg
- Ethylbenzene – 0.7 mg/kg
- Total xylenes – 1.75 mg/kg.

These SSLs are provided in Table 2, along the summary of analytical results for soils. These values should be used as generally guidelines only. Since groundwater has been impacted at the Property, alternative cleanup levels for soils may be required by, or acceptable to, the RWQCB.

PRELIMINARY REMEDIATION GOALS

Human health risks from petroleum hydrocarbon-impacted soils in California are often evaluated using either of two methods:

- A comparison with US EPA Region 9 Preliminary Remediation Goals (PRGs)
- Completion of a site-specific Health Risk Assessment (HRA).

The PRGs are risk-based values used for evaluating contaminant concentrations under various exposure scenarios (i.e., residential and industrial). PRGs are calculated using EPA toxicity values and “standard” exposure factors to estimate contaminant concentrations in environmental media (soil, air and water) that are considered protective of humans over a lifetime. The PRGs are chemical concentrations that correspond to a fixed level of risk (i.e., either one-in-one million cancer risk, or a noncarcinogenic hazard quotient of 1). As stated in US EPA guidance, PRGs are not intended to be a stand-alone decision making tool. PRGs have been developed for a select list of common specific chemical contaminants; there are no PRGs for classes of chemicals or products such as gasoline, or “TPH.”

Given the caveats listed above, PRGs are useful in screening the relative human health risks associated with specific chemicals identified at contaminated sites. PRGs for the fuel-related VOCs detected during this investigation are provided in Table 2.

CONCLUSIONS

Based on the results of this and previous investigations, SCS concludes the following:

- Soils in the area of the former UST have been impacted with TPH-g, benzene and other VOCs at concentrations above generally accepted regulatory guidelines (i.e., the SSLs and PRGs). Based on our experience with similar sites, remediation of soils will be required by the RWQCB.

- A comparison of Figures 4 and 5 and Figures 6 and 7 shows that the lateral extent of TPH-g and benzene impacts to soil are greater at 10 feet bgs than at 5 feet bgs. This is likely due to the lateral spreading or "pan caking" of TPH-g above groundwater, which was first encountered at approximately 10 feet bgs during drilling.
- The results of groundwater "grab" samples (collected during the "soils" investigation), as shown in Figures 8 and 9, show potential impacts to groundwater. However, groundwater samples recovered from the monitoring wells show much lower concentrations of fuel-related constituents. These data indicate the "grab" samples have overestimated the extent of impacts to groundwater. Continued groundwater monitoring to confirm the initial results is recommended.
- The results of samples collected from monitoring wells indicate only minor impacts to groundwater, that is, less than 0.189 mg/L of TPH-g and traces of ethylbenzene (1.2 ug/L), xylenes (4.8 ug/L), methyl tert butyl ether (MTBE, 3.9 ug/L) and tert butyl alcohol (38.8 ug/L). As shown in Table 3, none of the monitoring well samples contained fuel-related constituents above the maximum contaminant levels (MCLs) for drinking water.

RECOMMENDATIONS

Based on the results of this investigation, SCS recommends:

- Continued groundwater monitoring to establish a baseline of data that can be used to justify closure or "no further action" by the Los Angeles Regional Water Quality Control Board.
- The existing impacts to soil do not appear to have resulted in any significant impact to groundwater. Therefore, any remediation of soils should be conducted in conjunction with proposed future developments, in order that the soil remediation goals are consistent with future use.

- Notes:
- 1) bgs = below ground surface
 - 2) -- = Not Applicable or Not Analyzed
 - 3) ND = None Detected
 - 4) TRG = The Reynolds Group
 - 5) SCS = SCS Engineers
 - 6) * = Result Includes Heavy-Range Hydrocarbons (C23-C40)
 - 7) J = Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL).
 - 8) MCL = U.S. EPA or California primary or secondary (as noted) MCL; lowest value provided.
 - 9) ** = California Secondary MCL
 - 10) ^ = MCL for total trihalomethanes, including chloroform, bromodichloromethane, dibromochloromethane and bromoform.

APPENDIX A
LONG BEACH HEALTH DEPARTMENT
WELL PERMIT

CITY OF LONG BEACH

DEPARTMENT OF HEALTH & HUMAN SERVICES

2525 Grand Avenue Long Beach, CA 90815-1765 (562) 570-4134 FAX (562) 570-4038

WELL PERMIT

Permit # 1128

Date: July 26, 2005

All work must be completed in accordance with Water Well Bulletin 74-81 and 74-90

Site Address: 901 W Anaheim St
Owner: City of Long Beach
Owner Address: 333 W Ocean Blvd. 3rd Fl., Long Beach
Consulting Firm: SCS Engineers
Consulting Firm Address: 3900 Kilroy Airport Way, Ste 100, Long Beach 90806
Drilling Company: Layne Christensen
Drilling Company Address: 1101 Etiwanda Ave., Fontana, CA 92337
Method of Construction/Destruction: see attached

3 Monitoring Wells

This permit valid for one year from date above

Steven Nakauchi, REHS IV
Cross-Connection/Water Program

PROJECT NAME: LONG BEACH CITY TOW YARD

WELL ID: MW1, MW2 and MW3

PROJECT NUMBER:

CASING TYPE: SCHEDULE 40 PVC

LOCATION: 901 West Anaheim Street
Long Beach, CA

DEPTH TO WATER: Approximately 8 to 10 feet

A. TOTAL DEPTH OF BORING: 20 feet

B. CASING LENGTH: 20 feet

C. BORING DIAMETER: 10 inches

D. CASING DIAMETER: 4 inches

E. PERFORATED ZONE:

Perforated from: 5 feet below ground surface
to 20 feet below ground surface

Perforation type: Factory slotted

Perforation size: 0.010 inches

F. SURFACE COMPLETION: 18 inches

Material: Concrete

G. SANTARY SEAL:

Depth: from surface completion to top of sand

Material: Hydrated medium bentonite chips

H. FILTER PACK:

Depth: 4 feet below ground surface

to 20 feet below ground surface.

Material: #2/16 Sand

TEL: (562) 426-9544
FAX: (562) 427-0805

Workorder No.: 077857

RE: LB CITY TOW YARD, 01204007.02

Attention: Tara Holmes

Enclosed are the results for sample(s) received on July 28, 2005 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (562)989-4045 if I can be of further assistance to your company.

Sincerely,

Eddie F. Rodriguez
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and cannot be reproduced in part or in its entirety without written permission from the client and Advanced Technology Laboratories.

CLIENT: SCS Engineers
Project: LB CITY TOW YARD, 01204007.02
Lab Order: 077857

CASE NARRATIVE

EPA 8260 analysis was performed using 5035 preservation requirements. Any high level dilutions were performed on a preserved methanol sample unless otherwise noted.

RE: Long Beach City Tow Yard, 01204007.02

Attention: Kevin Green

Enclosed are the results for sample(s) received on June 22, 2005 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (562)989-4045 if I can be of further assistance to your company.

Sincerely,

Eddie F. Rodriguez
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and cannot be reproduced in part or in its entirety without written permission from the client and Advanced Technology Laboratories.

CASE NARRATIVE

All volatile analyses were performed using 5035 preservation requirements. Any high level dilutions were performed on a preserved methanol sample unless otherwise noted.

Chlorobenzene	ND	5.0	µg/L	1	6/28/2005	

Qualifiers: ND - Not Detected at the Reporting Limit S - Spike Recovery outside accepted recovery limits
 J - Analyte detected below quantitation limits R - RPD outside accepted recovery limits
 B - Analyte detected in the associated Method Blank E - Value above quantitation range
 DO - Surrogate Diluted Out H-Samples exceeding holding time

Results are wet unless otherwise specified

NOTES:

For 5035 preserved vials, analyze 8260 first. As needed, use acetate sleeves for diesel.

To: Aguila, Carmen
Subject: Long Beach City Tow Yard Samples

Carmen,

For the LB City Tow Yard project (SCS Project No. 01204007.02), please analyze the soil and groundwater samples for TPG-gasoline only. The analysis for TPH-diesel is not necessary.

Thank you – Kevin

Data Qualifiers and Descriptors

Data Qualifier:

- *: In the QC section, sample results have been taken directly from the ICP reading. No preparation factor has been applied.
- B: Analyte was present in the Method Blank.
- D: Result is from a diluted analysis.
- E: Result is beyond calibration limits and is estimated.
- H: Analysis was performed over the allowed holding time due to circumstances which were beyond laboratory control.
- J: Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL).
- M: Matrix spike recovery is outside control limits due to matrix interference. Laboratory Control Sample recovery was acceptable.
- S6: Surrogate recovery is outside control limits due to matrix interference.
- S8: The analysis of the sample required a dilution such that the surrogate concentration was diluted below the method acceptance criteria.
- X: Results represent LCS and LCSD data.

Definition:

- %Limi: Percent acceptable limits.
- %REC: Percent recovery.
- Con.L: Acceptable Control Limits
- Conce: Added concentration to the sample.
- LCS: Laboratory Control Sample
- MDL: Method Detection Limit is a statistically derived number which is specific for each instrument, each method, and each compound. It indicates a distinctively detectable quantity with 99% probability.
- MS: Matrix Spike
- MS DU: Matrix Spike Duplicate

Tel: (888) 288-AETL • (818) 845-8200 • Fax: (818) 845-8840 • www.aetlab.com

Data Qualifiers and Descriptors

- ND: Analyte was not detected in the sample at or above MDL.
- PQL: Practical Quantitation Limit or ML (Minimum Level as per RWQCB) is the minimum concentration that can be quantified with more than 99% confidence. Taking into account all aspects of the entire analytical instrumentation and practice.
- Recov: Recovered concentration in the sample.
- RPD: Relative Percent Difference
-

LIMITATIONS/DISCLAIMER

This report has been prepared specifically for Overland, Pacific & Cutler, Inc, on behalf of the Long Beach Redevelopment Agency, with specific application to groundwater monitoring related to a former underground gasoline storage tank at the former Long Beach City Tow Yard site located at 901 West Anaheim Street in Long Beach, California. This document has been prepared in accordance with the care and skill generally exercised by reputable professionals, under similar circumstances, in this or similar localities. No other warranty, expressed or implied, is made as to the professional opinions presented herein. Third parties use this report at their own risk. SCS assumes no responsibility for the accuracy of information obtained from, compiled or provided by outside sources. Changes in site use and conditions may occur due to variations in rainfall, temperature, water usage, economic, or other factors. This report is not a legal opinion.

1 INTRODUCTION

SCS Engineers (SCS) was retained by Overland, Pacific & Cutler, Inc, on behalf of the Long Beach Redevelopment Agency, to prepare this groundwater monitoring report for the former Long Beach City Tow Yard located at 901 West Anaheim Street, Long Beach, California (the “Property,” **Figures 1 and 2**). This report is submitted pursuant to the request in a letter dated December 28, 2009, from the Los Angeles Regional Water Quality Control Board (LARWQCB). This letter requested an additional round of groundwater monitoring, as well as additional information and requests as discussed below.

2 LARWQCB ADDITIONAL REQUESTS

Information and other requests by the LARWQCB are discussed below:

- Current land use on the Property and the adjacent properties – The Property was historical a part of the City of Long Beach Tow Yard; it is currently a part of the City of Long Beach Public Service Yard. The Los Angeles River and Flood Control Channel is located to the west. Other portions of the Long Beach Public Service Yard are located north and south. San Francisco Avenue is located to the east, across which is an industrial and commercial area. A map showing the Property and surrounding land use is provided as **Figure 2**.
- Description of previous soil remediation activities on the Property – The previous work conducted on the Property is summarized in the section below.
- Property Owner Information – The Property and all of the immediately adjacent parcels are owned by the City of Long Beach. Only City of Long Beach property is impacted by the release from the Property. A *Certified Declaration for Compliance with Fee Title Holder Notification Requirements* form, completed and signed by city personnel, is provided in **Appendix C**.
- The role of Mr. John Cutler of Overland, Pacific & Cutler, Inc. – Mr. John Cutler was the property owner’s representative. In this capacity, he was copied on past correspondence associated with the Property. The new property owner representative is Mr. Craig Justesen of Overland, Pacific & Cutler, Inc.
- Submission of past reports to the State GeoTracker Internet Database – On February 10, 2010, previous reports referenced below were uploaded to the GeoTracker database. This report will be uploaded to the Geotracker database concurrent with submittal to the LARWQCB.

3 BACKGROUND

SCS was provided copies of three previous reports by other environmental consultants. Since then, four reports of investigation and groundwater monitoring have been prepared by SCS, as discussed below.

MANESS ENVIRONMENTAL SERVICES, NOVEMBER 1995

An *Underground Storage Tank Closure Report*, dated November 2, 1995, prepared by Maness Environmental Service, Inc. (Maness), indicated that on August 30, 1995, a gasoline 550-gallon UST was cleaned and removed from the Property. Two soil samples were collected during the tank removal: one from below the UST excavation and one from a soil stockpile. Analytical results indicated that gasoline-range organics at a concentration of 7,500 milligrams per kilograms (mg/kg) were detected in soils beneath the UST. Groundwater was reportedly encountered at 8 to 10 feet below ground surface (bgs) during the tank excavation. Approximately 150 gallons of UST rinsate was transported from the Property. The report indicates that soils were also removed, although the source and volume of the soils were not provided. Based on the analytical results, Maness recommended characterizing the lateral and vertical extent of the soil impacted by hydrocarbons in the vicinity of the UST.

EPICS INTERNATIONAL, JANUARY 1996

A *Final Site Characterization Report for the Phase II Environmental Assessment of Gasoline-Impacted Soils* was prepared by Epics International (Epics) on January 31, 1996, and indicated that six soil borings (B1-B6; on **Figure 3**) were advanced to depths ranging from 5 to 13 feet bgs in the area surrounding the former UST. Reportedly, 13 soil samples (two from each boring - one shallow and one deep - plus a third from B2), and five groundwater samples (from the 10-foot depth of each boring except for B4), were collected and analyzed. Three additional soil samples were collected: one from each of the north and south sidewalls of the Maness excavation (discussed above) at a depth of six feet bgs, and one from under the center of the excavation at a depth of 10 feet bgs.

Laboratory analyses from the Epics investigation reportedly detected TPH-g and TPH as diesel (TPH-d) in soil (concentrations up to 5,500 mg/kg for TPH-g, and 530 mg/kg for TPH-d) and groundwater (concentrations up to 3,400 milligrams per liter [mg/L] for TPH-g, and 600 mg/L for TPH-d). BTEX were also detected in soils at concentrations up to 27, 48, 110, and 540 mg/kg, respectively, and in groundwater with concentrations up to 18, 42.4, 108, and 703 mg/L, respectively. The highest concentrations of TPH-g, TPH-d and BTEX in soils were found at the B5 location. The highest concentrations of TPH-g, TPH-d, ethyl benzene, and xylenes in groundwater were found at the B1 location; and the highest concentrations of benzene and toluene in groundwater were detected at the B5 location. Based on the sample analysis, Epics recommended excavating the soil in the "immediate area of the former tank location" to a depth of approximately 8 feet bgs or until groundwater is encountered, whichever was shallower. Epics also recommended installing three groundwater monitoring wells to determine the direction of groundwater flow and to monitor the impact to the groundwater.

THE REYNOLDS GROUP, NOVEMBER 2001

A *Workplan to Advance Geoprobos and Install Groundwater Monitoring Wells* was prepared by The Reynolds Group (TRG), dated November 15, 2001 and submitted to the LARWQCB. The workplan summarized the Maness 1995 and the Epics 1996 reports. The workplan proposed the

advancement of six borings to collect soil and groundwater samples and three groundwater monitoring wells.

SCS ENGINEERS, OCTOBER 2005

The TRG workplan was approved by the LARQCB in a letter dated February 19, 2002. In June 2005, under the oversight of SCS, six borings were advanced to a depth of 14 feet bgs. Soil samples were analyzed for TPH-g and volatile organic compounds (VOCs). Groundwater was encountered at approximately 12 feet bgs. Groundwater samples were also collected from each of the borings and analyzed for TPH-g and VOCs. In July 2005, three groundwater monitoring wells were installed on the Property in the vicinity of the former UST. Soil samples were also collected and analyzed during the installation of the wells. In August 2005, groundwater flow was towards the southeast.

Soils in the area of the former UST were impacted with TPH-g (up to 1,500 mg/kg), benzene (up to 300 micrograms per kilogram [ug/kg]), ethylbenzene (up to 34,000 ug/kg), and xylenes (up to 34,000 ug/kg). Groundwater samples collected from the monitoring wells indicated concentrations of TPH-g (up to 0.189 mg/L), ethylbenzene (up to 1.2 micrograms per liter [ug/L]), xylenes (up to 4.8 ug/L), methyl tert butyl ether (MTBE, up to 3.9 ug/L), and tert butyl alcohol (TBA, up to 38.8 ug/L).

SCS concluded that impacts to the soil did not appear to have resulted in significant impact to the groundwater, and recommended continued groundwater monitoring to establish a baseline of data that could be used to justify closure by the LARWQCB. SCS also recommended that soil remediation should be conducted with proposed future development, so that remediation goals would be consistent with future use.

SCS ENGINEERS, APRIL 2006

In March 2006, groundwater was collected from the three monitoring wells on the Property. The groundwater was analyzed for TPH-g and VOCs. In March 2006, groundwater flow was towards the southeast. Groundwater samples collected from the monitoring wells indicated concentrations of TPH-g (up to 0.402 mg/L), benzene (up to 15.8 ug/L), ethylbenzene (up to 18.0 ug/L), xylenes (up to 5.8 ug/L), and MTBE (up to 2.8 ug/L). SCS concluded that the groundwater monitoring results were similar to the previous event.

SCS ENGINEERS, JULY 2006

In June 2006, groundwater was collected from the three monitoring wells on the Property. The groundwater was analyzed for TPH-g and VOCs. In June 2006, groundwater flow was towards the southeast. Groundwater samples collected from the monitoring wells indicated concentrations of TPH-g (up to 1.840 mg/L), benzene (up to 45.8 ug/L), ethylbenzene (up to 50.8 ug/L), xylenes (up to 9.4 ug/L), and MTBE (up to 1.3 ug/L). SCS concluded that the groundwater monitoring results were similar to previous events.

SCS ENGINEERS, OCTOBER 2006

In September 2006, groundwater was collected from the three monitoring wells and analyzed for TPH-g and VOCs. In September 2006, groundwater flow was towards the southeast. Groundwater samples collected from the monitoring wells indicated concentrations of TPH-g (up to 1.03 mg/L), benzene (up to 36.7 ug/L), ethylbenzene (up to 58.7 ug/L), xylenes (up to 4.4 ug/L), and MTBE (up to 2.0 ug/L). SCS concluded that the groundwater monitoring results were similar to previous events and that further monitoring was not warranted.

4 GEOLOGIC, HYDROLOGIC, AND TOPOGRAPHIC INFORMATION

PHYSIOGRAPHIC SETTING

According to the U.S. Geological Survey (USGS), Long Beach (1964, photorevised 1981), California 7.5 minute topographic map, the Property is located immediately east of the Los Angeles River at an elevation of approximately five feet above mean sea level, about 1.3 miles north of San Pedro Bay. Regional topography is relatively flat with a gentle slope to the west.

GEOLOGY AND SOILS

Geologic maps indicate that surface sediments in the area are Quaternary alluvium and coastal deposits of silt, sand, and gravel that are underlain by the late Pleistocene Lakewood Formation. The Lakewood Formation, which consists of gravel, sand, sandy silt, silt and clay with shale pebbles, extends to a depth of approximately 100 feet (CDWR, 1961). Sediments below the Lakewood Formation belong to the late Pleistocene San Pedro Formation.

GROUNDWATER

The Property is located in the southern portion of the West Coast Groundwater Basin. The first regional groundwater aquifer is the Gaspur, which immediately overlies the Lakewood Formation. First groundwater in the vicinity of the Property is approximately 10 feet below grade (CDWR, 1961). There are no known regional groundwater contamination problems in this area. However, shallow groundwater has locally been impacted by saltwater intrusion; therefore, it is not used as a drinking water source. Previous monitoring indicates that groundwater flow is generally southeasterly.

5 SEMI-ANNUAL 2010 GROUNDWATER MONITORING

Groundwater wells MW1 through MW3 were monitored for groundwater elevations and sampled on February 18, 2010. Prior to purging any well, static water levels were measured from a marked reference point using an electronic oil/water interface probe. Groundwater elevation information is provided on **Table 1**. Groundwater was measured at depths between 3.90 and 4.98 feet bgs in the three wells (**Figure 4**); no free hydrocarbon product was detected.

Figure 4 is a site map showing groundwater elevations at the wells, groundwater contours, and the inferred groundwater flow direction in February 2010. Groundwater flow direction was determined towards the southeast with a gradient averaging approximately 0.0010 feet/foot.

Each of the monitored wells was purged and sampled with a portable “low flow” QED bladder pump. The wells were purged until field monitoring parameters (specific conductance [EC], temperature, and pH) stabilized. Water levels, purge volume, field monitoring parameters, and the date and time of all measurements were recorded on field data sheets (**Appendix A**). Samples were collected without headspace, labeled, and placed in coolers for transport to Advanced Environmental Testing Laboratory, Inc (AETL) in Burbank, California. Samples were tracked from point of collection through the laboratory using standard chain-of-custody protocol. Samples from each well were analyzed by AETL for TPH-g, TPH-d, and VOCs including fuel oxygenates using EPA Methods 8015M and 8260B, respectively.

All non-disposable equipment entering the well bores (pumps, bailers, field meters, etc.) was thoroughly decontaminated initially and between wells by cleaning with a laboratory grade detergent in clean potable water, and double rinsing with deionized water. Purge water generated during the project was placed in a 55-gallon DOT drum, sealed, labeled, and stored on the Property for later disposal.

ANALYTICAL RESULTS

The laboratory report, chain-of-custody documentation, and quality assurance/quality control (QA/QC) data from AETL are provided in **Appendix B**. A summary of the groundwater well analytical results is provided in **Table 2**.

TPH-g was detected in all three monitoring wells at concentrations ranging from 0.0087 to 0.352 mg/L (in MW3). A map showing TPH-g contours is provided as **Figure 5**. TPH-d was only detected in the sample from MW3 at a concentration of 0.263 mg/L (below the laboratory quantification limit). A total of eight VOCs were detected in groundwater. As shown in **Table 2**, only benzene in MW3 at 13.5 ug/L exceeded its MCL (maximum contaminant level) of 1 ug/L. Benzene was the only VOC detected in all three wells. A map showing benzene contours is provided as **Figure 6**.

6 CONCLUSIONS AND RECOMMENDATIONS

Historical information indicates that residual hydrocarbon concentrations in soil are above generally-accepted cleanup goals and that remediation of soils is therefore warranted. SCS has recommended that soil remediation be conducted with proposed future development, so that remediation goals would be consistent with future use.

The current concentrations of fuel-related constituents in groundwater are similar to or lower than concentrations from the 2006 groundwater monitoring events. SCS believes further investigation or monitoring is not warranted and that the data support closure for groundwater.

Parameters taken with: Hanba U-53 Other Parameters: _____

Sampled at: 11:49 (time) Sample collection method: QED MicroPurge

Sample delivered to AETL by L Weaver at _____

Sample #'s: _____ Other #'s: _____

Parameters Collected; Number of Bottles; Bottle Lot Number:

8260B + Oxygenates
8015M + PH-B, PH-D

GROUNDWATER SAMPLING RECORD

Well ID: MW-3 Station #: _____ Project # 01209295.00

Facility Name: Long Beach City Toward. Date: 2/18/10

Well Depth: 20' Depth to Water: 4.98 Well Diameter: 4"

Casing Material: pvc Volume Of Water per Well Volume: _____

Sampling Crew: L Weaver

Equipment: QED MicroPurge Tubing Material: Polyethylene Pump set at 12' ft.

Weather Conditions: Sunny 72°, Calm wind

NOTES: Clear water, mid odor.

Data Qualifiers and Descriptors

Data Qualifier:

*:	In the QC section, sample results have been taken directly from the ICP reading. No preparation factor has been applied.
B:	Analyte was present in the Method Blank.
D:	Result is from a diluted analysis.
E:	Result is beyond calibration limits and is estimated.
H:	Analysis was performed over the allowed holding time due to circumstances which were beyond laboratory control.
J:	Analyte was detected . However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL).
M:	Matrix spike recovery is outside control limits due to matrix interference. Laboratory Control Sample recovery was acceptable.
MCL:	Maximum Contaminant Level
NS:	No Standard Available
S6:	Surrogate recovery is outside control limits due to matrix interference.
S8:	The analysis of the sample required a dilution such that the surrogate concentration was diluted below the method acceptance criteria.
X:	Results represent LCS and LCSD data.

Definition:

%Limi:	Percent acceptable limits.
%REC:	Percent recovery.
Con.L:	Acceptable Control Limits
Conce:	Added concentration to the sample.
LCS:	Laboratory Control Sample
MDL:	Method Detection Limit is a statistically derived number which is specific for each instrument, each method, and each compound. It indicates a distinctively detectable quantity with 99% probability.

American Environmental Testing Laboratory Inc.

2834 & 2908 North Naomi Street, Burbank, CA 91504 • DOHS NO: 1541, LACSD NO: 10181

Data Qualifiers and Descriptors

MS:	Matrix Spike
MS DU:	Matrix Spike Duplicate
ND:	Analyte was not detected in the sample at or above MDL.
PQL:	Practical Quantitation Limit or ML (Minimum Level as per RWQCB) is the minimum concentration that can be quantified with more than 99% confidence. Taking into account all aspects of the entire analytical instrumentation and practice.
Recov:	Recovered concentration in the sample.
RPD:	Relative Percent Difference

Long Beach CA 90813

**UNDERGROUND STORAGE TANK
REMOVAL REPORT**

July 1, 2008

Prepared by: Steven G. Aichele
Pacific Coast Tank
235 E. Broadway, #706
Long Beach CA 90802
562-491-0067

Underground Storage Tank (UST) Site Information

Site Address: 1725 San Francisco Ave.
Long Beach CA 90813

Site Owner: City of Long Beach
2600 Temple Ave.
Long Beach CA 90806

Site Description: This UST site stored and dispensed fuel for City vehicles. The system consisted of one 12,000-gallon, fiberglass-clad, double-walled steel UST used to store diesel; one 12,000-gallon, fiberglass-clad, double-walled steel UST used to store gasoline; double-walled fiberglass piping; and four fuel dispensers.

UST System was installed on: November 18, 1998

UST system removed on: July 1, 2008

UST system removed and disposed of by: Moine Bros.
521 East D Street
Wilmington CA 90744

UST System Preparation and Removal

The following steps were taken to prepare the UST system for removal:

1. All product was removed from the tanks and manifested as hazardous waste.
2. Tanks were rinsed with water and detergent. The rinse water was then removed and manifested as hazardous waste.
3. Tanks were inerted by adding 25 lbs per 1,000 gallons of tank capacity.
4. Tank interior O₂ level was measured at less than 5% and LEL was measured and determined to be 0%.

The following steps were taken to remove the UST system:

1. Tank tops and piping were exposed by excavating the area.
2. The excavation area was frequently monitored for LEL readings.
3. Tanks were certified (and marked as such) by a marine hygienist/industrial chemist to be clean and safe to transport.
4. Tanks and piping were removed from the excavation.
5. Soil sampling and analysis were conducted in accordance with CUPA direction and as described in the attached UNDERGROUND TANK REMOVAL AND SOIL SAMPLING REPORT. Note that water was encountered in the excavation, but no water samples were taken.
6. Site was backfilled and re-paved once approval was given by the CUPA.

UNDERGROUND TANK REMOVAL AND SOIL SAMPLING REPORT

**City of Long Beach Public Works Maintenance Yard
1725 San Francisco Avenue
Long Beach, California 90813**

Long Beach Fire Department Project Number 530729

August 7, 2008

Introduction

This report describes the removal of two underground storage tanks (USTs), the associated piping, and four fuel dispensers from the City of Long Beach Public Works Department Maintenance Yard at 1725 San Francisco Avenue in Long Beach, California (Figure 1). The USTs were of double-walled steel, fiberglass-clad construction and were 12,000-gallons in volume. One UST was formerly used to store gasoline and the other was used to store diesel fuel. Locations of the USTs at the site are shown on Figure 2.

Hydrogeology

The site is located on the Coastal Plain of Los Angeles County, adjacent to the Los Angeles River and approximately 1½ miles north of the Pacific Ocean, at an elevation of approximately 10 feet. The shallow subsurface at the site is made up of moderate brown to olive gray silty sand. The depth to groundwater beneath the site, as observed in the UST excavation, is approximately 9 feet.

UST Removal

The soils covering the USTs were excavated using a backhoe on July 1, 2008. In compliance with Southern California Air Quality Management District (AQMD) Rule 1166 requirements, the AQMD was notified prior to beginning the UST excavation and volatile organic compound (VOC) concentrations in the air were monitored as the excavation progressed. Copies of the Rule 1166 notification and monitoring forms are included in Attachment A of this report.

After they were uncovered, the USTs were cut open, pressure-washed in-place, and certified clean by a Marine Chemist. The water used to wash the USTs was collected in a vacuum truck and disposed of at the DeMenno/Kerdoon facility in Compton, California. A copy of the Hazardous Waste Manifest under which the water was transported is included as Attachment B. A copy of the Marine Chemist certificate is included as Attachment C.

The USTs were removed from the site on July 2, 2008, under supervision of Inspector Tim Buzbee of the Long Beach Fire Department. The USTs were lifted from the excavation using a crane and were loaded directly onto a truck for transport to the Moine Bros. facility in Wilmington, California, where they were destroyed. A copy of the Certificate of Destruction is included in Attachment D.

After the USTs were removed, groundwater covered the bottom of the excavation to a depth of approximately two feet, and free-product diesel fuel was observed to be floating on the water in the southwest corner of the excavation. The diesel fuel had leaked into the pea-gravel backfill surrounding the USTs when one of the dispenser pans was removed during the excavation. Absorbent pads were used to skim the free product, and a vacuum truck was mobilized to the site to pump out the groundwater. Approximately 5,000 gallons of water were removed from the excavation.

Soil Sampling

Soil samples were collected from beneath either end of each former UST using a track-mounted excavator to retrieve native soils from depths of approximately 16 feet below grade. Soil samples were also collected from beneath the former dispensers using the excavator to retrieve soils from depths of approximately six feet below grade. Locations of the soil samples are shown on Figure 2. All the samples were collected in EPA Method 5035-approved 25-gram Encore® samplers, which were immediately labeled, placed in a plastic bag, and stored on ice until delivery later the same day to Cal Tech Environmental Laboratories in Paramount, California.

Chain-of-Custody procedures were followed throughout sample collection, transportation, and delivery to the laboratory. The samples were analyzed by EPA Method 8015M to determine concentrations and speciation of total petroleum hydrocarbons (TPH) in the gasoline (C₆-C₁₂) range, the diesel (C₁₃-C₂₄) range, and the heavy-oil (C₂₅-C₄₀) range and by EPA Method 8260B to determine concentrations of VOCs.

Analytical Results

A copy of the laboratory analytical report is contained in Attachment E. The results showed that no detectable concentrations of TPH or of VOCs were present in any of the samples.

Conclusion

Based on the lack of detectable concentrations of TPH or VOCs in the samples collected from beneath the USTs and fuel dispensers at the City of Long Beach Public Works Maintenance Yard at 1725 San Francisco Avenue in Long Beach, California, no further investigation at the site is recommended.

Serial # 0393

Survey Requested By: MOINE Bro's. City of Long Beach Pub. Works Date: 01 JULY 2008
TANKS No's. 0393-A; B Vessel Owner or Agent: 1725 SAN FRANCISCO AVE.
DOUBLE-WALL STEEL + FIBERGLASS UNDERGROUND LONG BEACH CA
Vessel: GASOLINE (A); DIESEL (B) Type of Vessel: O₂, LEL, VISUAL, TOXICITY Specific Location of Vessel: 1906
Last Cargo: Tests Performed: Time Survey Completed:

TANKS
No. 0393-A
No. 0393-B
(MARKED WITH ORANGE)
{ SPRAY-PAINT }

20.8% O₂, 0% LEL
NO DETECTABLE H₂S (1 ppm)
< 75 ppm HYDROCARBON VAPOR (AS ISOBUTYLENE)
NOT SAFE FOR WORKERS
NOT SAFE FOR HOT-WORK
TANKS HAVE BEEN DISCONNECTED, OPENED,
WASHED, VENTILATED AND ARE
SAFE TO COLD-CUT

B.W. TECH. MOD MSPID, S.N. SK 107-001003 CALIBRATED 01 JUL '08

In the event of any physical or atmospheric changes affecting the STANDARD SAFETY DESIGNATIONS assigned to any of the above spaces this certificate is voided; or if there is any question about the conditions, immediately stop all work and contact the undersigned Marine Chemist.

QUALIFICATIONS: Transfer of ballast, cargo, fuel, or manipulation of valves or closure equipment tending to alter conditions in pipelines, tanks, or compartments subject to gas accumulation, unless specifically approved on this Certificate, requires inspection and a new Certificate for spaces so affected. All lines, vents, heating coils, valves, and similar enclosed appurtenances shall be considered "not safe" unless otherwise specifically designated. Movement of the vessel from its specific location voids the Certificate unless shifting of the vessel within the facility has been specifically authorized on this Certificate.

STANDARD SAFETY DESIGNATIONS: (partial list, paraphrased from NFPA 306, Subsections 4.3.1 through 4.3.6).

ATMOSPHERE SAFE FOR WORKERS: In the compartment or space so designated (a) the oxygen content of the atmosphere is at least 19.5 percent and not greater than 22 percent by volume; (b) the concentration of flammable materials is below 10 percent of the lower explosive limit; (c) any toxic materials in the atmosphere associated with cargo, fuel, tank coatings, inerting mediums, or fumigants are within permissible concentrations at the time of the inspection.

NOT SAFE FOR WORKERS: In the compartment or space so designated, entry is not permitted.

ENTER WITH RESTRICTIONS: In the compartment or space so designated, entry for work is permitted only if conditions of proper protective equipment, or clothing, or time, or all of the aforementioned, as appropriate, are as specified.

SAFE FOR HOT WORK: In the compartment or space so designated (a) the oxygen content of the atmosphere is not greater than 22 percent by volume; (b) the concentration of flammable materials in the atmosphere is less than 10 percent of the lower explosive limit; (c) the residues, scale, or preservative coatings are cleaned sufficiently to prevent the spread of fire and are not capable of producing a higher concentration than permitted by (a) or (b); (d) all adjacent spaces, containing or having contained flammable or combustible materials shall be sufficiently cleaned of residues, scale, or preservative coatings to prevent the spread of fire, or they are inerted. Ship's fuel tanks, lube tanks, or engine room or fire room bilges, or other machinery spaces, are treated in accordance with the Marine Chemist's requirements.

SAFE FOR LIMITED HOT WORK: In the compartment or space so designated (a) portions of the space meet the requirements for Safe for Hot Work and Partial Cleaning, as applicable, or (b) the space is inerted, adjacent spaces meet the requirements for Safe for Hot Work, and hot work is restricted to specific locations; (c) portions of the space shall meet the requirements for Safe for Hot Work, as applicable, and the nature or type of hot work is limited or restricted.

NOT SAFE FOR HOT WORK: In the compartment or space so designated, hot work is not permitted.

CHEMISTS ENDORSEMENT. This is to certify that I have personally determined that all spaces in the foregoing list are in accordance with NFPA 306 Control of Gas Hazards on Vessels and have found the condition of each to be in accordance with its assigned designation.

The undersigned acknowledges receipt of this Certificate under NFPA 306 and understands conditions and limitations under which it was issued, and the requirements for maintaining its validity.

This Certificate is based on conditions existing at the time the inspection herein set forth was completed and is issued subject to compliance with all qualifications and instructions.

CERTIFICATE OF DESTRUCTION

On this 2ND day of JULY (month), 20 08, empty tanks/
containers (as described below) were accepted by Moine Bros. and were cut/sheared
or otherwise processed for scrapping in a safe and legal manner according to
standard practices.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 06/23/2009 has revealed that there are 8 CERC-NFRAP sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 02/17/2010 has revealed that there are 3 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 02/17/2010 has revealed that there are 13 RCRA-SQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 08/18/2010 has revealed that there are 13 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, and dated 08/23/2010 has revealed that there is 1

EXECUTIVE SUMMARY

SWF/LF site within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.

A review of the LUST list, as provided by EDR, and dated 07/23/2010 has revealed that there are 36 LUST sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, and dated 07/23/2010 has revealed that there are 61 UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 02/17/2010 has revealed that there are 11 RCRA-NonGen sites within approximately 0.25 miles of the target property.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

EXECUTIVE SUMMARY

Manufactured Gas Plants: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the Manufactured Gas Plants list, as provided by EDR, has revealed that there is 1 Manufactured Gas Plants site within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
EDISON/LONG BEACH MGP III	LG BEACH AREA, 8TH INT	WSW 1/2 - 1 (0.872 mi.)	AP208	317

EDR Historical Auto Stations: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc.

A review of the EDR Historical Auto Stations list, as provided by EDR, has revealed that there are 14 EDR Historical Auto Stations sites within approximately 0.25 miles of the target property.

EDR Historical Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc.

A review of the EDR Historical Cleaners list, as provided by EDR, has revealed that there are 7 EDR Historical Cleaners sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code:	D002
Waste name:	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code:	D029
Waste name:	1,1-DICHLOROETHYLENE

Waste code:	F001
Waste name:	THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code:	F003
Waste name:	THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Latitude: 33.784401
Longitude: -118.133143
Case Type: Cleanup Program Site
Case Worker: TA
Local Agency: Not reported
RB Case Number: 0678
File Location: Regional Board
Potential Media Affected: Aquifer used for drinking water supply, Indoor Air, Soil, Soil Vapor,
Under Investigation
Potential Contaminants of Concern: Benzene, Tetrachloroethylene (PCE), Toluene, Trichloroethylene (TCE),
Xylene, Gasoline
Site History: The property is currently occupied by West Coast Choppers that operates a custom motorcycle fabrication shop. The property is occupied by two buildings. Historically, the main laundry facility was located on the west and the auxiliary building was on the east. The area between the two buildings is covered by asphalt pavement. Adjacent to the main building on the west, there is a sump. The past operations and uses of the sump are unknown. Three underground storage tanks (USTs) and one above-ground storage tank (AST) were present at the site prior to ARAMARK's purchase in 1986. USTs included a 6,000-gallon diesel, a 550-gallon gasoline, and a Stoddard solvent UST of unknown size. The AST contained tetrachloroethylene (PCE) and had a capacity of 1,000 gallons. In 1982, the diesel and gasoline USTs and PCE AST were removed. Later, the Stoddard solvent UST was filled with concrete and pea gravel and abandoned in-place. The exact date of the Stoddard solvent UST abandonment is unknown but

occurred prior to 1986. Several soil and groundwater investigations have been conducted at the site since 1987. Soil and groundwater have been impacted with chlorinated volatile organic compounds, petroleum hydrocarbons, benzene, toluene, ethylbenzene and xylenes (BTEX). Highest historical soil concentrations include 28,000 micrograms per kilogram (g/kg) of PCE, 1,200 g/kg of cis-1,2-dichloroethylene (c-1,2-DCE), 2,300 g/kg of benzene, and 12,000 g/kg of total petroleum hydrocarbons. Initial groundwater investigations in 1988 detected concentrations of benzene, trans-1,2-DCE, and PCE up to 1,600, 7,240, and 8,350 micrograms per liter (g/L), respectively. A groundwater pump and treat system operated at the site from 1994 to 2002, pumping groundwater through a shallow tray air stripper and two granular activated carbon units prior to discharge at the storm drain, under the National Pollutant Discharge Elimination System (NPDES) permit No. CA0063045. Groundwater monitoring has been conducted since 1987. In general, concentrations of chlorinated volatile organic compounds in groundwater have decreased due to the operation of remediation system, except for vinyl chloride. Maximum groundwater concentrations in the second quarter of 2008 include PCE at 450 g/L, TCE at 120 g/L, , cis-1,2-DCE at 59 g/L, vinyl chloride at 600 g/L, benzene at 33 g/L, and chlorobenzene at 47 g/L . There are currently 7 groundwater monitoring wells on the property. Four groundwater monitoring wells are scattered around the property, across Orange Avenue, and across West Anaheim Street. The groundwater monitoring wells are screened differently based on when they were installed.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
