Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D007
Waste name: CHROMIUM

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F006
Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D004
Waste name: ARSENIC

Biennial Reports:

Last Biennial Reporting Year: 2009

Annual Waste Handled:

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Potential Media Affected: Aquifer used for drinking water supply, Soil
Potential Contaminants of Concern: Benzene, Other Chlorinated Hydrocarbons, Toluene, Xylene, Arsenic, Lead, Polynuclear aromatic hydrocarbons (PAHs)
Site History: Prior to 1965, the site was owned and operated by Pacific Electric Railroad Company and used for electric railroad repair, maintenance, and inspection. Southern Pacific Transportation Company acquired the site in 1965 and leased it to various entities, whose primary operations were bulk transfer and storage of liquid petroleum and chemical products. Union Pacific Railroad Company (UPRR) acquired the site in 1966, in a merger of Southern Pacific Transportation Company. Subsequently, the City of Long Beach acquired the Site from the UPRR in May 2007. On-going soil remediation.

Site History: Terminal2 has been in operation since the 1920s and has historically been used to store crude oil and refined petroleum products. The 18-acre Terminal 2 facility has 27 aboveground storage tanks (ASTs) that are contained within three tank farms, each of which is surrounded by a concrete firewall. ARCO Terminal Services Corporation (ATSC) owns and operates Terminal 2,. The western portion of the Terminal 2 facility is leased from the POLB, who also owns the storage lot located north of the Terminal 2 facility.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS

Map ID
Direction
Distance
Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

CROSBY & OVERTON PLANT NUMBER 1 (Continued)

1000377893

CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003

Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code:
Waste name:

F002
THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code:
Waste name:

F003
THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code:
Waste name:

F005
THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code:
Waste name:

F008
PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM ELECTROPLATING OPERATIONS WHERE CYANIDES ARE USED IN THE PROCESS.

Waste code:
Waste name:

F011
SPENT CYANIDE SOLUTIONS FROM SALT BATH POT CLEANING FROM METAL HEAT TREATING OPERATIONS.

Waste code:

Biennial Reports:

Last Biennial Reporting Year: 2009

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 4824367.3

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Amount (Lbs): 1179238.3

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Corrective Action Summary:

Event date: 06/01/1984
Event: CA029WQ

Event date: 06/01/1984
Event: CA049PA

Event date: 06/01/1984
Event: CA Prioritization, Facility or area was assigned a low corrective action priority.

Event date: 07/28/1988
Event: RFA Completed, Assessment was an RFA.

Event date: 08/01/1988
Event: CA049SI

Event date: 01/15/1993
Event: CA Prioritization, Facility or area was assigned a low corrective action priority.

Event date: 02/24/1993
Event: Stabilization Measures Evaluation, This facility is not amenable to stabilization activity at the present time for reasons other than 1- it appears to be technically infeasible or inappropriate (NF) or 2- there is a lack of technical information (IN). Reasons for this conclusion may be the status of closure at the facility, the degree of risk, timing considerations, the status of corrective action work at the facility, or other administrative considerations.

Facility Has Received Notices of Violations:

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Facility Status: Active Facility - Permitted. Crosby & Overton (C&O) is located at 1630 West 17th Street in the City of Long Beach. A Hazardous Waste Facility Permit which was issued in 1993 and expired on July 1, 2003. C&O submitted the Part A & B permit application to renew the permit on December 2002. C&O was allowed to continue to operate under the 1993 permit until a final decision on renewal permit application is made. C&O is an off-site hazardous wastes storage, treatment and transfer facility which receives both bulk and containerized wastes. C&O accepts a wide variety of wastes. Principal operations at the facility include treatment of aqueous wastes contaminated with hydrocarbons, metals and other regulated organic and inorganic materials. The primary purpose of the facility is treatment of water that contains various, however, relatively small (less than 10 percent) quantities of oil and/or other waste constituents for treatment. The treatment capacity of the facility is limited by its industrial discharge permit for treated water of 43,750 gallons per day. The treatment system has twenty (20) waste tanks with a total liquid capacity of approximately 174,935 gallons. The aqueous waste treatment process includes pH adjustment (neutralization), phase

separation, solids removal and stabilization, and oil recovery. The recovered oil is shipped off-site for recycling by an independent oil recycler. C&O has nine container storage areas. Five storage areas are used for storage of acid, caustic, poison and other regulated wastes, one is used for storage of oxidizer and reactive wastes, and two are used to store ignitable wastes. The ninth storage area is the evidence locker. The evidence locker is provided for securing chemical evidence seized by law enforcement agencies. The maximum allowable number of on-site hazardous waste drums at any given time is six hundred fifty six (656) 55-gallon drums. The facility is also allowed to store in the designated locations on-site at any given time not to exceed 80 cubic yards in roll-off bins, end dumps, or DOT-approved containers containing waste solids. The facility uses roll-off bins to store filter cake, sludge, contaminated soil, debris, crushed empty containers and other solid material. Large portable wastewater tanks may also be stored in the staging area for short periods of time (up to fourteen (14) days) when necessary. The total volume for all portable tanks combined shall not exceed 2,100 gallons.

Manufactured Gas Plants:

**Actual:
7 ft.**

The former Long Beach III Manufactured Gas Plant (MGP) site is located at the southwest corner of the intersection of Pier B Street and Edison Avenue in the City of Long Beach, California. The site consists of approximately five acres. An MGP operated at the site from 1906 until 1916. From 1916 to 1971, the entire site was used for natural gas storage and distribution. In 1974, the City of Long Beach began dismantling and removing the equipment and structures from the site. The City of Long Beach currently owns the site. Land use adjacent and in the vicinity of the site is primarily commercial and industrial associated with shipping and petroleum industries. The entire site is paved and approximately 80 percent of the site is used as a parking lot for imported cars while the remaining portion is located under Pier B Street. Contaminants of Concern at the site include Hydrocarbons (TPH), Polycyclic Aromatic Hydrocarbon (PAH's), Lead, and Arsenic.

Comments: DTSC reviewed and approved the PEA Report prepared for the Long Beach III site. DTSC recommended that further action is required on the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Deed/LUR Enforcement & Implementation Plan
Completed Date: 2004-09-23 00:00:00
Comments: Signed Deed Restriction lodged with county.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 2001-12-19 00:00:00
Comments: Additional Soil Sampling Workplan finalized

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 2005-05-06 00:00:00
Comments: Annual Status report submitted to DTSC indicating that there has been no change in land use and asphalt cap has been maintained.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 2006-05-07 00:00:00
Comments: Annual Status report submitted to DTSC. Report indicates that there has been no change in land use and asphalt cap is well maintained.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 2007-05-09 00:00:00
Comments: Annual Status report submitted to DTSC. Annual report indicates that the end land use has not changed and that the asphalt cap has been well maintained.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 2008-06-06 00:00:00
Comments: Annual status report submitted indicates that there was no change in land use and that the asphalt cover remains intact.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 2009-05-04 00:00:00

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A

CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AFS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA Renewable Fuel Standard (RFS) Program encourages the blending of renewable fuels into our nation's motor vehicle fuel by establishing annual renewable fuel standards, responsibilities of refiners and other fuel producers, a trading system and other compliance mechanisms, and recordkeeping and reporting requirements. In addition to the rule, EPA has published a Regulatory Impact Analysis (RIA), which contains analyses of the economic and environmental impacts of the expanded use of renewable fuels under this program. A renewable fuel is defined as a motor vehicle fuel that is produced from plant or animal products or wastes, as opposed to fossil fuel sources. Renewable fuels include ethanol, biodiesel and other motor vehicle fuels made from renewable sources. Currently, FRS only includes facilities using ethanol fuels from the RFS registered facility list.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US Facility Response Plan (FRP) contains plans for responding, to the maximum extent practical, to worst case discharges of oil.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 03/31/2010	Source: EPA
Date Data Arrived at EDR: 04/02/2010	Telephone: N/A
Date Made Active in Reports: 04/12/2010	Last EDR Contact: 07/14/2010
Number of Days to Update: 10	Next Scheduled EDR Contact: 10/25/2010
	Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/31/2010	Source: EPA
Date Data Arrived at EDR: 04/02/2010	Telephone: N/A
Date Made Active in Reports: 04/12/2010	Last EDR Contact: 07/14/2010
Number of Days to Update: 10	Next Scheduled EDR Contact: 10/25/2010
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 03/31/2010	Source: EPA
Date Data Arrived at EDR: 04/02/2010	Telephone: N/A
Date Made Active in Reports: 04/12/2010	Last EDR Contact: 07/14/2010
Number of Days to Update: 10	Next Scheduled EDR Contact: 10/25/2010
	Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 01/29/2010	Source: EPA
Date Data Arrived at EDR: 02/09/2010	Telephone: 703-412-9810
Date Made Active in Reports: 04/12/2010	Last EDR Contact: 09/02/2010
Number of Days to Update: 62	Next Scheduled EDR Contact: 10/11/2010
	Data Release Frequency: Quarterly

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA's Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 06/23/2009	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/15/2010	Telephone: 703-603-8704
Date Made Active in Reports: 02/10/2010	Last EDR Contact: 07/21/2010
Number of Days to Update: 26	Next Scheduled EDR Contact: 10/25/2010
	Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 06/23/2009	Source: EPA
Date Data Arrived at EDR: 09/02/2009	Telephone: 703-412-9810

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 02/17/2010

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal institutional controls / engineering controls registries

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 12/20/2009	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/20/2010	Telephone: 703-603-0695
Date Made Active in Reports: 04/12/2010	Last EDR Contact: 09/13/2010
Number of Days to Update: 82	Next Scheduled EDR Contact: 12/27/2010
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 12/20/2009	Source: Environmental Protection Agency

State- and tribal - equivalent NPL

RESPONSE: State Response Sites

Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

Date of Government Version: 08/18/2010	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 09/16/2010	Telephone: 916-323-3400
Date Made Active in Reports: 09/29/2010	Last EDR Contact: 09/16/2010
Number of Days to Update: 13	Next Scheduled EDR Contact: 11/22/2010
	Data Release Frequency: Quarterly

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Data Release Frequency: Varies

US HIST CDL: National Clandestine Laboratory Register

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-NonGen: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

SAN BERNARDINO COUNTY:

Hazardous Material Permits

This listing includes underground storage tanks, medical waste handlers/generators, hazardous materials handlers, hazardous waste generators, and waste oil generators/handlers.

Date of Government Version: 09/07/2010	Source: San Bernardino County Fire Department Hazardous Materials Division
Date Data Arrived at EDR: 09/08/2010	Telephone: 909-387-3041
Date Made Active in Reports: 09/29/2010	Last EDR Contact: 08/16/2010
Number of Days to Update: 21	Next Scheduled EDR Contact: 11/29/2010
	Data Release Frequency: Quarterly

SAN DIEGO COUNTY:

Hazardous Materials Management Division Database

The database includes: HE58 - This report contains the business name, site address, business phone number, establishment 'H' permit number, type of permit, and the business status. HE17 - In addition to providing the same information provided in the HE58 listing, HE17 provides inspection dates, violations received by the establishment, hazardous waste generated, the quantity, method of storage, treatment/disposal of waste and the hauler, and information on underground storage tanks. Unauthorized Release List - Includes a summary of environmental contamination cases in San Diego County (underground tank cases, non-tank cases, groundwater contamination, and soil contamination are included.)

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 12/31/2007
Date Data Arrived at EDR: 08/26/2009

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: Rextag Strategies Corp.

Telephone: (281) 769-2247

U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities

Source: Department of Social Services

Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2009 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

GEOCHECK[®] - PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

SAN FRANCISCO AVE/W ANAHEIM ST
929 W ANAHEIM ST
LONG BEACH, CA 90813

TARGET PROPERTY COORDINATES

Latitude (North):	33.78590 - 33° 47' 9.2"
Longitude (West):	118.2037 - 118° 12' 13.3"
Universal Transverse Mercator:	Zone 11
UTM X (Meters):	388557.2
UTM Y (Meters):	3738874.8
Elevation:	13 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	33118-G2 LONG BEACH, CA
Most Recent Revision:	1964

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Target Property County</u>	<u>FEMA Flood</u>
LOS ANGELES, CA	<u>Electronic Data</u>
	YES - refer to the Overview Map and Detail Map
Flood Plain Panel at Target Property:	06037C - FEMA DFIRM Flood data
Additional Panels in search area:	Not Reported

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic</u>
NORTH LONG BEACH (OE)	<u>Data Coverage</u>
	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data:*

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile West
Site Name:	CROSBY & OVERTON
Site EPA ID Number:	CAD028409019
Surficial Aquifer Flow Dir.:	NOT AVAILABLE FOR THE PERCHED AQUIFER.
Measured Depth to Water:	10.5 to 11.5 feet in the perched zone.
Hydraulic Connection:	The site is underlain by fine sand with mica to 9 feet, 2 feet of clay, and fine sand with mica to a depth of 20 feet at the terminus of borings. The perched aquifer zone at the site is saline and is fed by the Pacific Ocean.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION</u>	<u>GENERAL DIRECTION</u>
	<u>FROM TP</u>	<u>GROUNDWATER FLOW</u>

* ©1996 Site-specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
1	1/8 - 1/4 Mile ESE	SW
2	1/4 - 1/2 Mile SSE	SSE
3	1/4 - 1/2 Mile WNW	NW
4	1/4 - 1/2 Mile NE	NNW
5	1/4 - 1/2 Mile NW	N
10	1/2 - 1 Mile ESE	Not Reported
11	1/2 - 1 Mile WSW	Varies
12	1/2 - 1 Mile West	Not Reported
15	1/2 - 1 Mile West	NNW
16	1/2 - 1 Mile ENE	SW

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Cenozoic
System: Quaternary
Series: Quaternary
Code: Q (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Surficial Soil Types: loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Shallow Soil Types: fine sandy loam
gravelly - loam
sand
silty clay

Deeper Soil Types: stratified
clay loam
silty clay loam
gravelly - sandy loam
coarse sand
sand
weathered bedrock
very fine sandy loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2009 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Professional Experience

Mr. Green has a background in geology and paleontology. Since joining SCS in 1987, he has participated in numerous projects related to the investigation and remediation of hazardous chemicals in soils and groundwater. Selected project activities include:

- Project Manager for hundreds of Phase I environmental assessments. These projects—completed in accordance with various lender, ASTM, or government guidelines—consist of evaluating current on-site operations, generation of historical property use information, identifying potentially contaminated sites in the surrounding areas, review of previous reports and/or files maintained by regulatory agencies, and conclusions and recommendations regarding the presence of Recognized Environmental Conditions and further investigation.
- Hundreds of investigations of known or suspected hazardous waste sites to identify and characterize chemicals of concern in soil, soil vapor, and groundwater in accordance with regulatory requirements. Contaminants include a variety of hydrocarbon products, solvents, heavy metals, polychlorinated biphenyls (PCBs), and pesticides.
- Project Manager for numerous soil gas surveys utilized to assess the presence, nature, and extent of volatile organic compounds and/or methane related to contaminated soils, groundwater, and/or landfills. Elements of these projects have included assessments of vapor intrusion, protection of structures from subsurface gases, monitoring of indoor air, and health risk assessments.
- Numerous projects related to the removal, investigation, and remediation of contamination from leaking underground storage tanks. In accordance with requirements of the various regulatory agencies throughout Southern California, these UST projects have included soil, soil gas and groundwater contamination, and have included such tasks as: evaluation of site and regional hydrogeologic conditions; development work plans and health and safety plans; coordinate and conduct tank

removals; design of the investigative programs; review and selection of potential remedial alternatives; preparation of summary reports of findings; support of legal counsel in cost recovery actions; and support of client in cost recovery actions with the California UST Cleanup Fund.

- Project Manager for numerous remediation projects involving various hydrocarbon products, pesticides, chlorinated solvents, and/or heavy metals. Remediation projects include excavation and disposal of soils; on- and off-site treatment of soils; recovery and treatment/disposal of free product and groundwater; and the design, installation, and operation of vapor extraction systems for soil and groundwater contaminated with volatile organic compounds.
- Evaluation of environmental conditions at sanitary landfills. Mr. Green was Task Manager for the installation and sampling of groundwater monitoring wells at and adjacent to existing landfills to determine the presence of leachate. This work was done in accordance with state regulations and local ordinances.
- Project Manager for numerous lead-based paint (LBP) surveys and abatement projects for single and multifamily residential developments, commercial and public buildings. These projects consist of determining paint and/or dust sampling methodologies; interpretation of testing results; evaluation and recommendations for appropriate LBP hazards abatement; development of LBP abatement specifications; coordination and selection of licensed LBP abatement subcontractors; collection and analysis of abatement confirmation samples; characterization of waste materials; and preparation of summary reports documenting LBP surveys and the appropriate removal and disposal of LBP-related hazards.
- Expert testimony and research support for litigation related to environmental assessments, and the investigation and remediation of hazardous waste sites.

Project experience is as follows:

Project Manager for assessment and vapor extraction remediation of a former industrial dry cleaning facility. Tasks included initial indoor air assessment for Proposition 65 compliance; coordination of equipment, subcontractors, and personnel for the installation of vapor extraction and monitoring wells, header lines, and vapor extraction system (VES), including acid “scrubber” for treated vapors, treatment pad and enclosure, electrical power, natural gas, water supply and wastewater discharge; city, county and AQMD permits; operation and maintenance of VES; regulatory reporting; and decommissioning of VES upon regulatory closure.

Project Director for general environmental consulting services for the Community Redevelopment Agency of the City of Los Angeles, CA. With approximately 93 work order directives for services, these projects include initial site assessments, asbestos-containing material (ACM) surveys, lead-based paint (LBP) surveys, soil gas surveys, soils investigations, groundwater investigations, remedial and abatement activities for soils, asbestos, and LBP, second-party reviews of reports and work completed by other environmental consultants, underground storage tank (UST) removals, groundwater well destruction, and an environmental

audit of hazardous materials handling practices of the client's operations. These projects were completed on vacant, former oil field, residential, commercial, industrial, and manufacturing properties ranging in size from a single lot to a 29-block mixed-use area. In addition to ACMs and LBP, constituents of concern that have been identified include a variety of petroleum hydrocarbon products, chlorinated solvents, heavy metals, PCBs, pesticides, and subsurface combustible gases such as methane and volatile organic compounds.

Project Director for Brownfields Redevelopment Site, Los Angeles, CA. SCS completed several phases of environmental services to facilitate the mixed-use redevelopment of property for a parking garage, childcare center, and affordable housing. Historical machine shop operations had resulted in a release of the chlorinated solvent PCE to soils. Although some cleanup was conducted in the early 1990s, residual PCE contamination remained. In accordance with current standards and with the proposed goal of affordable housing and childcare center, SCS re-investigated the site under the oversight of the Los Angeles RWQCB. Services provided for this project included investigations of soil and soil gas, health risk assessment and selection of remedial and mitigation options, design of vapor barrier to protect the building from chlorinated solvents, coordination and oversight remedial excavation, oversight and certification for installation of a sub-building vapor barrier, post-construction monitoring of indoor, background and sub-slab air to confirm that remediation and mitigation measures have met regulatory goals, and coordination of a "no further action" letter from the regulatory authority.

Project Director for due diligence investigations, manufacturing facility, Torrance, CA. SCS conducted a series of environmental assessments, investigations, and remedial activities that provided sufficient information to identify the environmental issues, business risks and facilitate the client's successful sale of property. A number of recognized environmental conditions including former and existing underground fuel storage tanks, a machine shop, wastewater treatment sumps and clarifier, paint shop, chemical storage, and chlorinated solvent degreasing operations were identified. Project activities included: shallow and deep soil and soil vapor investigations, followed by groundwater sampling; geophysical survey and excavations to find an existing diesel UST previously closed in-place, removal of the UST, and remedial excavations under Torrance Fire Department oversight to obtain closure; long-term soil vapor extraction pilot test including a workplan submitted to the Los Angeles Regional Board, installation of vapor extraction and monitoring wells, SVE Pilot Test Report, and recommendations for further SVE.

Project Manager for the investigation, abatement, and subsequent demolition of a building containing a shooting range, as a part of a RCRA (Resource, Conservation and Recovery Act) facility closure under oversight by the California Department of Toxic Substance Control. Lead-containing dust from the shooting range was found to have contaminated building materials and soils. This project involved the selection of remedial methods and contractors, monitoring of workers to assess exposure to lead-containing dust, monitoring of dust emissions during demolition to confirm compliance, confirmation sampling and analyses, characterization of wastes for disposal, and submittal of a summary report documenting the appropriate remediation and disposal of lead-containing wastes.

Project Director for the investigation and remediation of a former wood treating facility under the oversight of the California Department of Toxic Substance Control. Chemicals of potential concern include pentachlorophenol, creosote, diesel fuel, methylene chloride, zinc, copper, and arsenic. Project elements included a Remedial Investigation/Feasibility Study (RI/FS) report for

vadose zone soil, including a Health Risk Assessment; Remedial Action Plan for impacted soil, which recommended capping as the most feasible remedial alternative; a cone penetrometer (CPT) study aimed at further defining site stratigraphy, evaluating for the presence of nonaqueous phase liquids, and mapping the areal distribution of chemicals of concern; quarterly groundwater monitoring from 16 wells; Storm Water Pollution Prevention Plan and monitoring; and assistance to client in development and/or sale of the property.

Project Manager for well investigation program compliance under Regional Water Quality Control Board (RWQCB) oversight at a jet engine repair, maintenance, and testing facility.

Information from this investigation was used by the USEPA to identify Potentially Responsible Parties for the San Fernando Valley Superfund site. On-site operations included 14 USTs; numerous clarifiers, sumps, and drain lines; plating, machining, and painting shops; a jet engine test facility; and solvent, alkaline, and steam cleaning facilities. Approximately 70 exploratory soil borings were drilled and analyzed for chlorinated solvents, heavy metals, cyanide, and various hydrocarbon products, such as gasoline, machining and waste oils, Stoddard solvent, and jet fuel. A soil gas survey of the facility was also conducted to screen for potential contamination by volatile organic compounds, including the installation of multi-depth, nested soil vapor monitoring wells. Fate and transport modeling of chlorinated solvents was used to assess the potential for impacts to groundwater. The RWQCB issued a No Further Action letter for the investigation and remediation of chlorinated solvents at the site. The project also included design, permitting, construction, and operation and maintenance of a hot air-assisted Vapor Extraction System to remediate Jet A-impacted soils. After 1 year of operation, remediation was sufficient to obtain closure with no further requirements from the RWQCB. Further, as a part of the decommissioning and demolition of the facility, a comprehensive survey for asbestos-containing materials (ACMs) in nine buildings was conducted. SCS prepared plans and specifications for the abatement of ACMs, assisted the client in selection of an abatement contractor, conducted daily oversight of abatement activities including air monitoring, and prepared a final report documenting the appropriate removal and disposal of ACMs.

Mr. Green has participated in a certified health and safety program in compliance with OSHA Standard 29 CFR 1910.120. He is knowledgeable in incident response operations, team functions, personnel safety, and field equipment. He is able to recognize and evaluate potential chemical and physical hazards and associated risks in field operations; discuss and use personnel protective equipment such as respiratory protection and protective clothing; use and interpret direct-reading instruments; and examine and establish Standard Operating Safety Guidelines to ensure safe and effective response operations.

Mr. Green has been involved in numerous SCS projects related to hazardous waste characterization and management. He has experience in site assessment studies, underground tank investigations and their associated remediation programs, landfill studies, and geologic and hydrogeologic site characterization studies. His work experience includes all project phases from development of cost estimates for various site assessment and cleanup programs, to groundwater monitoring and sampling, to preparation of final reports and interfacing with regulatory agencies.

Professional Experience

Ms. Hutchens has 9 years of experience in environmental consulting, all with SCS. She has a diverse background in environmental sciences, and technical skills related to collection of soil samples, determination of soil classifications and properties, slope stability assessments, interpretation of depositional environments, and stratigraphic analysis. Since joining SCS, she has been involved in numerous projects related to the investigation of hazardous chemicals in soils and groundwater.

Environmental Management

Selected projects in which Ms. Hutchens has participated include:

Environmental assessments of properties prior to real estate transfer. These projects involve evaluation of past on-site operations, identifying potentially contaminated sites, and historical record searches of files maintained by regulatory agencies for both the subject and adjacent properties.

Site investigative activities, including preparation of work plans, conducting soil gas surveys, installation of soil borings and subsequent sampling, and evaluation of applicable remedial alternatives.

Groundwater and soil sampling. Projects involve precision mapping of sites, collection of soil and groundwater samples, soil-gas surveys, and evaluation of subsurface contaminants in groundwater in accordance with regulatory requirements or generally accepted guidelines.

Oversight of projects involving installation of landfill gas mitigation systems and monitoring wells, including lithologic logging and design quality assurance (QA) at numerous landfills in Southern California.

Coordination and direction of underground storage tank projects, including investigations, removals, and closures, and subsequent reporting to lead regulatory agencies.

Investigation of potential releases from underground storage tanks. Projects included preparation of workplans, coordination with regulatory agencies, oversight of field investigation activities, and preparation of investigation report.

Management, coordination, and direction of projects that include conducting soil vapor extraction pilot tests to remediate soil contaminated by tetrachloroethene (PCE).

Planning, coordination, and supervision of remedial actions that included excavation, transport, and disposal of contaminated soils. Work involved preparation of Remedial Action Plans, direction of confirmatory sampling, and interfacing with regulatory agencies.

Characterization of hazardous waste materials. These projects include collection of soil and/or liquid samples to profile the waste materials, interpretation of laboratory results, and evaluation of disposal/recycling options to minimize the costs and liabilities to clients associated with the removal of wastes.

Ms. Hutchens has participated in a certified health and safety program in compliance with OSHA Standard 29 CFR 1910.120. She is knowledgeable in incident response operations, team functions, personnel safety, and field equipment. She is able to recognize and evaluate potential chemical and physical hazards and associated risks in field operations; discuss and use personnel protective equipment such as respiratory protection and protective clothing; use and interpret direct-reading instruments; and examine and establish Standard Operating Safety Guidelines to ensure safe and effective response operations.

DISCLAIMER

This report has been prepared for the Alere Property Group, LLC with specific application to a Phase II investigation conducted at 949 West Anaheim Street, Long Beach, California. The purpose of this investigation was to assess the potential for gasoline impacts to the Property associated with a historical gasoline station that may have been located on the Property.

The report has been prepared in accordance with the care and skill generally exercised by reputable professionals, under similar circumstances, in this or similar localities. No other warranty, expressed or implied, is made as to the professional opinions presented herein. No other party, known or unknown to SCS Engineers, is intended as a beneficiary of this work product, its content or information embedded therein. Third parties use this report at their own risk.

1 INTRODUCTION

SCS Engineers (SCS) was retained by the Alere Property Group, LLC to conduct a Phase II Site Investigation on a portion of the former City Tow Yard facility located at 901/949 West Anaheim Street in Long Beach, California (APN 7271-007-903; the “Property”). A map showing the general location of the Property and surrounding area is provided as **Figure 1**. Investigation activities were conducted in accordance with SCS’s proposal dated November 4, 2010.

BACKGROUND

A Draft Phase I Environmental Assessment (Phase I) report by SCS, dated November 5, 2010, identified a historical gas station (based on city directory listings) at 949 West Anaheim Street in 1931 and 1935. This address (949) is not a known or confirmed address on the Property. Based on present geo-coding, 949 Anaheim would be located near the southwestern corner of the Property. However, historic aerial photographs from 1928 show the Property vacant except for a building on the southeastern corner. In 1939 this same building was occupied by a lumber company. Based on the potential for contamination, SCS concluded this unconfirmed historic service station was a Recognized Environmental Condition and recommended further investigation. This report documents investigation activities conducted by SCS across the southern portion of the Property to assess the potential for contamination.

2 GEOLOGIC AND HYDROGEOLOGIC CONDITIONS

PHYSIOGRAPHIC SETTING

According to the U.S. Geological Survey (USGS), Long Beach (1964, photorevised 1981), California 7.5 minute topographic map, the Property is located immediately east of the Los Angeles River at an elevation of approximately five feet above mean sea level about 1.3 miles north of San Pedro Bay. Regional topography is relatively flat with a gentle slope to the west.

GEOLOGY AND SOILS

Geologic maps indicate that surface sediments in the area are Quaternary alluvium and coastal deposits of silt, sand, and gravel that are underlain by the late Pleistocene Lakewood Formation. The Lakewood Formation, which consists of gravel, sand, sandy silt, silt and clay with shale pebbles, extends to a depth of approximately 100 feet (California DWR, Bulletin No.104). Sediments below the Lakewood Formation belong to the late Pleistocene San Pedro Formation.

GROUNDWATER

The Property is located in the southern portion of the West Coast Groundwater Basin. The first groundwater aquifer in the region is within the Gage Aquifer within the Lakewood Formation. Based on groundwater monitoring reports for a former UST site located in the 14th Street right-of-way on the north boundary of the Property, first groundwater is approximately 4 to 5 feet below grade and flows southeasterly in direction. Shallow groundwater has locally been

impacted by saltwater intrusion; therefore, it is not used as a drinking water source. Groundwater beneath the Property may be tidally influenced due to tides in the adjacent Los Angeles River.

3 SITE INVESTIGATION

PERMITTING AND SUBSURFACE UTILITIES CLEARANCE

As required by law, SCS contacted Underground Service Alert prior to conducting any subsurface work (Dig Alert No. A0319288). Goldak Inc. of Glendale, California, conducted a geophysical survey to clear boring locations of subsurface utilities and other potential obstructions. In addition, SCS obtained a soil boring permit from the City of Long Beach, Department of Health and Human Services (Permit # 1700, **Appendix A**).

SOIL SAMPLE COLLECTION

On November 18, 2010, a total of 10 soil borings (SB1 through SB10) were advanced on the Property as shown on **Figure 2**. Soil borings SB2 through SB9 were drilled using a truck-mounted direct-push drill rig. Borings SB1 and SB10 were drilled inside the structure located on the southeastern corner of the Property and therefore drilled using a limited-access drill rig. Both drill rigs, operated by Kehoe Testing and Engineering of Huntington Beach, California, were equipped with a hydraulic hammer and a 2-foot long, 2-inch diameter sampler. A pointed steel tip was fixed to the head of the solid-spoon sampler and driven to the desired depth on a steel rod. Soil matrix samples were collected by retracting the drive tip through the center of the sampler with an inner rod, and hydraulically hammering the sampler an additional two feet. Soil samples were recovered in two-foot long, 1.5-inch diameter pre-cleaned acetate sleeves that had been placed inside the sampler. At each sample interval, an approximately 6-inch section was cut from the sample sleeve and preserved for subsequent laboratory analysis.

Standard three-step decontamination procedures were used for all sampling equipment between each sampling depth and each boring. New latex surgical gloves were used and frequently replaced in the handling of all soil samples to prevent cross-contamination.

A portion of each sample was placed in a zip-lock bag for lithologic determination and to screen samples for organic vapors in the field using a photo-ionization detector (PID). There were no obvious signs of fuel-impacts (such as odors, staining, or PID readings) noted in any of the soil samples collected. Copies of boring logs are included in **Appendix B**.

Samples selected for analysis of volatile organic compounds (VOCs) were prepared in the field using EPA Method 5035, which includes the collection of three five-gram aliquots of soil from each soil sample using a plunger/sub-sampler provided by the laboratory. The three aliquots of soil were immediately placed in 40 milliliter VOA (volatile organic analysis) vials as follows – two aliquots in VOAs with a sodium bisulfate preservative and one aliquot in a methanol preservative. Following recovery of soil samples a portion of each sleeve was retained and prepared for subsequent laboratory analysis. The ends were covered with Teflon squares, sealed with plastic end caps, and secured with non-volatile tape.

A solvent-free label noting the date of collection, sample number, and project number was affixed to each sample container. Immediately following labeling, samples were placed in a chilled cooler to be submitted to Chemtek Environmental Laboratories Inc. (Chemtek) of Santa Fe Springs, California, a California Department of Health Services certified laboratory. Samples were tracked from the point of collection through the laboratory using proper chain-of-custody protocol.

Soil samples were selectively analyzed (to provide representative coverage at all locations) for total petroleum hydrocarbons (TPH, carbon chain analysis) using EPA Method 8015M and VOCs using EPA Method 8260B/5035.

4 ANALYTICAL RESULTS

The Chemtek laboratory report, including chain-of-custody forms and quality assurance/quality control (QA/QC) data, is provided in **Appendix C**. A summary of the analytical results is provided in **Table 1**.

As shown in **Table 1**, TPH was not detected in any of the 10 soil samples analyzed. Benzene, toluene, and xylenes were detected at trace concentrations, ranging from 2 to 4 micrograms per kilogram ($\mu\text{g/kg}$) in 8 of the 10 samples analyzed. Samples SB1 and SB5 did not contain detectable concentrations of VOCs.

5 REGULATORY LIMITS

The Regional Water Quality Control Board (RWQCB) has also established soil screening levels (SSLs) for hydrocarbon-impacted soils impacted with various VOCs based on the potential for groundwater contamination (RWQCB, 1996) including benzene, toluene, ethylbenzene, and xylenes (BTEX). Where impacted soils overlie non-drinking water aquifers, as is the case with this site, BTEX SSLs are set at 100 times their respective Maximum Contaminant Levels (MCLs) as preliminary levels determined to be protective of human health and the environment. Therefore, the SSLs are for VOCs detected during this investigation are:

- Benzene – 100 $\mu\text{g/kg}$
- Toluene – 15,000 $\mu\text{g/kg}$
- Xylenes – 175,000 $\mu\text{g/kg}$

Additionally, the US EPA Region 9 has established Regional Screening Levels (RSLs) for various chemicals of potential concern (COPC) for site screening and as initial cleanup goals, if applicable. The RSLs have been “modified” by the California EPA for some COPC. The VOC results from this investigation are compared to the RSLs and SSLs in **Table 1**.

As shown on **Table 1**, benzene, toluene and xylenes detected are far before regulatory limits.

6 CONCLUSIONS AND RECOMMENDATIONS

On November 18, 2010, SCS conducted a Phase II investigation at 901/949 West Anaheim Street, Long Beach, California. The purpose of the investigation was to assess potential impacts from a historic gas station located on the Property. Based on the results of this investigation, SCS has concluded the following:

- No obvious signs of fuel-impacts were observed in the soil samples collected from 10 borings drilled during the investigation.
- Petroleum hydrocarbons were not detected in any of the analyzed soil samples.
- Benzene, toluene, and xylenes were detected at trace concentrations (maximum of 4 micrograms per kilogram) in certain samples. These concentrations are well below regulatory limits.

In summary, the results of this investigation did not identify any evidence of significant impacts from petroleum hydrocarbons or volatile organic compounds on the Property. Further investigation is not recommended.

CERTIFICATE OF ANALYSIS

Job No. 011078

Date: 11-26-10

This is the Certificate of Analysis for the following samples:

Client : SCS Engineers
Contact person : Aaron Garrett
Project # : 01210161.01
Project : Former LB Public Service Yard
Project Site : 949 W. Anaheim St.
Long Beach, CA
Date of sample : 11-18-10
Date received : 11-18-10
Number of samples : 20
Sample matrix : soil
Sampling Method : 5035
Samples were labeled as follows

**Subject: Second Semiannual 2010 Groundwater Monitoring Report
Former Long Beach City Tow Yard
901 West Anaheim Street, Long Beach, California
(RWQCB Case No. 908130498)**

Dear Mr. Bjostad:

This letter provides results of the Second Semiannual 2010 Groundwater Monitoring for the above-referenced site, as requested in the Regional Water Quality Control Board's (RWQCB) *Directive to Take Corrective Action* letter dated November 2, 2010. Due to time constraints, a *Request for Extension* for this monitoring event was requested by SCS in a letter dated January 14, 2011, subsequently granted by you in an email on January 18, 2011.

The groundwater monitoring was conducted on January 21, 2011 for the Second Semiannual 2010 event. Attached you will find the following:

- Figures 1 and 2 – Site location Map and Groundwater Elevation Map
- Tables 1 and 2 – Summaries of Groundwater Elevation Data and Analytical Results
- Appendix A – Analytical Laboratory Report
- Appendix B – Groundwater Sampling Records

As shown in the attachments, groundwater monitoring results are similar to previous events. The next round of groundwater monitoring is scheduled for June 2011 (First Semiannual 2011), with a report due by July 15, 2011.

Additional information requested by the RWQCB in the November 2010 Directive letter is provided as follows:

- Clarification of groundwater flow direction in February 2010 – The groundwater flow direction for February 2010 was to the east-northeast as shown on Figure 2 of the Groundwater Monitoring Report (SCS, April 2010).
- Submittal of an anticipated schedule of proposed redevelopment and future land use – Definitive site-specific plans are not currently available. However, within the next year the Property will continue to be used as an outdoor storage facility, possibly as a truck container storage facility, or commercial building development will be initiated.

Should you have any questions or comments regarding this report, please feel free to contact the undersigned at (562) 426-9544.

Sincerely,

Notes:

- 1) -- = Not Applicable or Not Analyzed
- 2) < = Less than reporting limit
- 3) J = Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL).
- 4) MCL = Maximum Contaminant Level; NL = Notification Level (formerly referred to as action level). Reference - California Department of Health Services.

Data Qualifiers and Descriptors

Data Qualifier:

∗:	In the QC section, sample results have been taken directly from the ICP reading. No preparation factor has been applied.
B:	Analyte was present in the Method Blank.
D:	Result is from a diluted analysis.
E:	Result is beyond calibration limits and is estimated.
H:	Analysis was performed over the allowed holding time due to circumstances which were beyond laboratory control.
J:	Analyte was detected . However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL).
M:	Matrix spike recovery is outside control limits due to matrix interference. Laboratory Control Sample recovery was acceptable.
MCL:	Maximum Contaminant Level
NS:	No Standard Available
S6:	Surrogate recovery is outside control limits due to matrix interference.
S8:	The analysis of the sample required a dilution such that the surrogate concentration was diluted below the method acceptance criteria.
X:	Results represent LCS and LCSD data.

Definition:

%Limi:	Percent acceptable limits.
%REC:	Percent recovery.
Con.L:	Acceptable Control Limits
Conce:	Added concentration to the sample.
LCS:	Laboratory Control Sample
MDL:	Method Detection Limit is a statistically derived number which is specific for each instrument, each method, and each compound. It indicates a distinctively detectable quantity with 99% probability.

American Environmental Testing Laboratory Inc.

2834 & 2908 North Naomi Street, Burbank, CA 91504 • DOHS NO: 1541, LACSD NO: 10181

Data Qualifiers and Descriptors

MS: Matrix Spike

MS DU: Matrix Spike Duplicate

ND: Analyte was not detected in the sample at or above MDL.

PQL: Practical Quantitation Limit or ML (Minimum Level as per RWQCB) is the minimum concentration that can be quantified with more than 99% confidence. Taking into account all aspects of the entire analytical instrumentation and practice.

Recov: Recovered concentration in the sample.

RPD: Relative Percent Difference

August 9, 2011
File No. 01209295.01

Via US Mail and email (dbjostad@waterboards.ca.gov)

Mr. Dave Bjostad
Los Angeles Regional Water Quality Control Board
Underground Storage Tank Section
320 West 4th Street, Suite 200
Los Angeles, California 90013
(213) 576-6712

Subject: Report of Closure Activities – Former Long Beach City Tow Yard, 901 West Anaheim Street, Long Beach, California (RWQCB Case No. 908130498)

Dear Mr. Bjostad:

This letter documents groundwater monitoring well abandonment activities completed at the above-referenced site. A map showing the general location of the Property and surrounding area is provided as **Figure 1**. The Regional Water Quality Control Board (RWQCB) issued a No Further Action letter dated July 6, 2011, confirming the completion of site investigation and corrective action for the former underground storage tank at the site. A site map showing the abandoned groundwater well locations is provided as **Figure 2**.

Prior to well abandonment activities, a permit for well deconstruction (Permit # 1747) was acquired from the city of Long Beach Department of Health and Human Services. As required by law, SCS contacted Underground Service Alert prior to conducting any subsurface work (Dig Alert No. A11950688).

The groundwater monitoring wells were abandoned on July 22, 2011. A hollow-stem drill rig operated by WDC Exploration & Wells (WDC) of Montclair, California was used for abandonment activities. At each location, the well box was removed, then the well over drilled to a depth of 21 feet below ground surface (bgs), and the entire PVC well casing was removed. Each well boring was backfilled with cement/bentonite slurry and patched at the surface with dyed black concrete to match the existing ground surface. Three well completion reports, one for each well, were prepared by WDC and submitted to the California Department of Water Resources (enclosed).

Soil cuttings and water from well abandonment activities were placed in 55-gallon drums and temporarily stored onsite until proper characterization and profiling was completed. The soil and water were removed from the site on August 8, 2011, for transport and disposal/treatment at Soil Safe in Adelanto, California and K-Pure Waterworks in Rancho Cucamonga for soil and water, respectfully. Manifests for the disposal are available upon request.

Should you have any questions regarding this submittal, please contact the undersigned or Kevin Green at (562) 426-9544.

Sincerely,

Ashley P. Hutchens, REA

DISCLAIMER

This report has been prepared for the Alere Property Group, LLC with specific application to confirmation soil sampling conducted on two parcels (APNs 7271-007-005 and 7271-012-023) of the Former Long Beach Public Service Yard in Long Beach, California. The report has been prepared in accordance with the care and skill generally exercised by reputable professionals, under similar circumstances, in this or similar localities. No other warranty, express or implied, is made as to the professional opinions presented herein. No other party, known or unknown to SCS Engineers, is intended as a beneficiary of this work product, its content or information embedded therein. Third parties use this report at their own risk.

1 INTRODUCTION

SCS Engineers (SCS) was retained by the Alere Property Group, LLC (Alere) to conduct confirmation sampling on two parcels of the former Long Beach Public Service Yard site. An area of the Former Long Beach Public Service Yard (LBPSY) was found to contain varying amounts of fill materials containing debris reportedly from the 1933 Long Beach earthquake. Previous investigations (discussed below) identified elevated concentrations of lead and other metals in certain areas of the fill.

It is Alere's intent to lease the northern and southern portions of the former LBPSY (APNs 7271-012-020 and -023 and 7271-007-005). Although very little fill soil exists on these parcels, and elevated metals were not previously detected in the fill on these parcels, very little sampling had previously been conducted. Confirmation sampling was conducted in accordance to SCS' Workplan for Confirmation Sampling on Two Parcels (APNs 7271-012-023 and 7271-007-005) of the Former Long Beach Public Service Yard in Long Beach, California, dated February 10, 2012, approved by the DHHS in an email dated February 15, 2012. The confirmation soil sampling was conducted on these two parcels to characterize metals concentrations, if any, towards the goal of obtaining "no further action" (NFA) letters for these parcels.

It should be noted that the bulk of fill soil on the former LBPSY site lies on the two city blocks (APNs 7271-011-008 and 7271-008-013) between the parcels investigated within this report; a NFA letter for these two city blocks will be pursued separately. A Remedial Action Plan (RAP) for these two parcels is in preparation and will be submitted under a separate permit.

BACKGROUND

The former LBPSY consists of approximately 12 acres on four and a half city blocks and was recently sold by the City of Long Beach. Alere is the current property owner. A map showing the general location of the former LBPSY and surrounding area is provided as **Figure 1**. The northern portion of the property (APNs 7271-012-020 and -023) has been leased to Baker Tanks for use as a storage yard. The southern portion of the Property (APN 7271-007-005) is planned to be leased in the very near future for a similar purpose.

An SCS Phase I Environmental Assessment report, dated February 22, 2005, cited city personnel that indicated that fill material was placed on the raised portions of the former LBPSY; the exact date of deposition and the source of this material is unknown, but reportedly may include debris from the 1933 earthquake. Based on the Phase I report, among other recommendations, SCS recommended sampling and testing the fill soils for metals, petroleum hydrocarbons, and volatile organic compounds (VOCs). The resulting SCS Phase II investigation report (August 2, 2005) did not identify any significant concentrations of hydrocarbons or VOCs, but did identify soils with elevated concentrations of lead and other metals.

As indicated above, the amount of fill in the two areas investigated herein (depicted on **Figure 2**) is minimal, and because these parcels are or may be leased for surface storage in the near future, confirmation sampling was conducted to characterize the existing metals in these areas.

2 GEOLOGIC AND HYDROGEOLOGIC CONDITIONS

PHYSIOGRAPHIC SETTING

According to the U.S. Geological Survey (USGS), Long Beach (1964, photorevised 1981), California 7.5 minute topographic map, the former LBPSY is located immediately east of the Los Angeles River at an elevation of approximately five feet above mean sea level about 1.3 miles north of San Pedro Bay. Regional topography is relatively flat with a gentle slope to the west.

GEOLOGY AND SOILS

Geologic maps indicate that surface sediments in the area are Quaternary alluvium and coastal deposits of silt, sand, and gravel that are underlain by the late Pleistocene Lakewood Formation. The Lakewood Formation, which consists of gravel, sand, sandy silt, silt and clay with shale pebbles, extends to a depth of approximately 100 feet (California DWR, Bulletin No.104). Sediments below the Lakewood Formation belong to the late Pleistocene San Pedro Formation.

GROUNDWATER

The former LBPSY is located in the southern portion of the West Coast Groundwater Basin. The first groundwater aquifer in the region is within the Gage Aquifer within the Lakewood Formation. Based on groundwater monitoring reports for a former UST site located in the 14th Street right-of-way on the former LBPSY, first groundwater is approximately 4 to 5 feet below grade and flows southeasterly in direction. Shallow groundwater has locally been impacted by saltwater intrusion; therefore, it is not used as a drinking water source. Groundwater beneath the site may be tidally influenced due to tides in the adjacent Los Angeles River.

3 SITE INVESTIGATION

PERMITTING AND SUBSURFACE UTILITIES CLEARANCE

As required by law, SCS contacted Underground Service Alert prior to conducting any subsurface work (Dig Alert No. B20460079). Goldak Inc. of Glendale, California, conducted a geophysical survey to clear boring locations of subsurface utilities and other potential obstructions. In addition, SCS obtained a soil boring permit from the City of Long Beach, Department of Health and Human Services (Permit # 1781 dated February 2, 2012, **Appendix A**).

SOIL SAMPLE COLLECTION

On February 17, 2012, eight soil borings (CB-1 through CB-8) were advanced on the southern parcel, APN 7271-007-005 at 901 W. Anaheim Street, and three soil borings (CB-9 through CB-11) were advanced on the northern parcel, APN 7271-012-023 at 1601 San Francisco Avenue, as shown on **Figure 2**.

Soil borings were drilled using a truck-mounted direct-push drill rig operated by Kehoe Testing and Engineering of Huntington Beach, California. The rig was equipped with a hydraulic hammer and a 2-foot long, 2-inch diameter sampler. A pointed steel tip was fixed to the head of the solid-spoon sampler and driven to the desired depth on a steel rod. Soil matrix samples were collected from 6 to 12 inches bgs by retracting the drive tip through the center of the sampler with an inner rod, and hydraulically hammering to the desired sample depth. Soil samples were recovered in two-foot long, 1.5-inch diameter pre-cleaned acetate sleeves that had been placed inside the sampler. An approximately 6-inch section was cut from the sample sleeve and preserved for subsequent laboratory analysis. New latex surgical gloves were used and frequently replaced in the handling of all soil samples to prevent cross-contamination.

Samples collected during this investigation consisted primarily of light brown to gray silty sand. Minor debris such as brick and glass fragments were noted in several samples on the southern parcel.

Following recovery of soil samples, the ends of the acetate sleeve were covered with Teflon squares and sealed with plastic end caps. Samples were labeled noting the date and time of collection and sample number. Immediately following labeling, samples were placed in a chilled cooler to be submitted to Advanced Technology Laboratory (ATL) of Signal Hill, California, a California Department of Health Services certified laboratory. Samples were tracked from the point of collection through the laboratory using proper chain-of-custody protocol. Soil samples were analyzed for title 22 metals using EPA Method 6010B/7471.

4 CLEANUP GOALS

The California EPA Office of Environmental Health Hazard Assessment (OEHHA) published the *Human-Exposure-Based Screening Numbers Developed to Aid Estimation of Cleanup Costs for Contaminated Soil*, dated November 2004, revised January 2005. This document describes California Human Health Screening Levels (CHHSLs) for metals in soil for residential and industrial/commercial land use scenarios. The Property is proposed to be used in the near future as a storage yard; therefore the commercial CHHSLs would be applicable. With the exception of arsenic, the commercial CHHSLs for metals, shown in **Table 1**, will be used as the cleanup goals. Based on data collected during this and previous investigation, lead is likely to be the “driver” during remediation, that is, the primary chemical of concern (COC). The proposed cleanup goal and commercial CHHSL for lead is 320 mg/kg.

With regard to arsenic, the US EPA has acknowledged that in some cases, the predictive risk-based models generate concentrations that lie within or even below the typical background. The DTSC has acknowledged that the strict use of the arsenic concentrations from risk-based models is impractical and has set acceptable levels in soil in the range of 8 to 12 mg/kg for school sites in California. Further, in a presentation to the Society of Toxicology in March 2008, three scientists from DTSC presented a study to determine regional background concentrations of arsenic in soil in southern California. This study, derived from data collected from proposed school sites in five southern California counties, resulted in an upper-bound arsenic concentration of approximately 12 mg/kg. The authors concluded that this finding suggests that

12 mg/kg may be a useful screening number for evaluating arsenic as a chemical of potential concern (COPC). Therefore, the proposed cleanup goal for arsenic is 12 mg/kg.

5 ANALYTICAL RESULTS

The ATL laboratory report, including chain-of-custody forms and quality assurance/quality control (QA/QC) data, is provided in **Appendix B**. A summary of the analytical results is provided in **Table 1**.

As shown in **Table 1**, lead was detected in one sample (CB-5, located on the southerly parcel [APN 7271-007-005]) at a concentration of 380 milligrams per kilogram (mg/kg) above the commercial CHHSL of 320 mg/kg. The remaining seven samples on APN 7271-007-005 and the three samples on APN 7271-012-023 contained lead at concentrations well below the CHHSL of 320 mg/kg, ranging from 1.1 to 20 mg/kg. All other metals detected in the confirmation samples were below their respective CHHSLs and or cleanup goals as shown on **Table 1**.

6 CONCLUSIONS AND RECOMMENDATIONS

On February 17, 2012, SCS conducted confirmation sampling on the northern and southern portions of the former LBPSY where debris from the 1933 earthquake is minimal. The purpose of the investigation was to confirm lead concentrations in these areas where debris is minimal and the areas can be leased for storage. Based on the results of this investigation, SCS has concluded the following:

- Lead was detected below the remediation goal of 320 mg/kg in seven of the eight samples collected from the southern portion of the former LBPSY (APN 7271-007-005, 901 West Anaheim Street). Samples were collected at random from representative locations across the parcel. One sample (CB-5) contained lead above the remediation goal at a concentration of 380 mg/kg. **Table 2** provides the calculation of the 95% upper confidence limit (UCL) based on the analytical results of this investigation. As shown, the 95% UCL for the eight samples collected from the southern parcel is 141.5 mg/kg; the 95% UCL for all eleven samples (southern and northern parcels) is 103.1 mg/kg. Both of these calculated 95% UCLs are far below the cleanup goal of 320 mg/kg. It is SCS's opinion that the 95% UCL more accurately represents the lead concentrations in fill soils on this parcel than individual sample results. No other metals were detected above their respective cleanup goals.
- On the northern portion of the former LBPSY, at APN 7271-012-023 located at 1601 San Francisco Avenue, none of the 17 title 22 metals were detected above cleanup goals in confirmation samples.

In summary, the results of this and previous investigations did not identify any evidence of significant impacts from lead or other metals associated with debris from the 1933 earthquake on the northern and southern portions of the former LBPSY where the debris content in soil is minimal. SCS respectfully requests that the DHHS issue NFA letters for these two areas of the

former LBPSY, one for the southern portion (APN 7271-007-005) and one for the northern portion (APN 7271-012-023).

As previously indicated, the bulk of fill soil on the former LBPSY site lies on the two city blocks (APNs 7271-011-008 and 7271-008-013) between the parcels investigated within this report and an NFA letter for these two city blocks will be pursued separately.

Notes:

- 1) bgs = below ground surface
- 2) * Bradford, G.R., Chang, A.C., Page, A.L., Bakhtar, D., Fampton, J.A., and Wright, H., 1996, *Background Concentrations of Trace and Major Elements in California Soils*, Kearney Foundation of Soil Science Special Report, Division of Agriculture and Natural Resources, University of California.
- 3) ** - Values in milligrams per liter (mg/L)
- 4) ± - Value for total chromium (assumes 1:6 ratio of Cr VI:Cr III)
- 5) Residential/Industrial RSL = US EPA Region 9 Regional Screening Levels for Industrial Soils, November 2011 (http://www.epa.gov/reg3hwmd/risk/human/rb-concentration_table/Generic_Tables/pdf/master_sl_table_run_NOV2011.pdf).
- 6) Residential/Industrial CHHSL = California Human Health Screening Level for commercial/industrial land use as published by the California Environmental Protection Agency, June 2005. The CHHSL for lead was revised in September 2009.
- 7) TTL = Total Threshold Limit Concentration as identified in Title 22 of the California Code of Regulations. Wastes with concentrations above this value are considered hazardous for the purposes of disposal under California regulations.
- 8) STLC = Soluble Threshold Limit Concentration, in mg/L, as identified in Title 22 of the California Code of Regulations. A concentration of ten times the STLC is sometimes used as a trigger to conduct further analysis (i.e., the soluble analysis) of a sample to determine disposal requirements. Wastes with soluble concentrations above this value are considered hazardous for the purposes of disposal under California regulations.
- 9) TCLP = Toxicity Characteristic Leaching Procedure concentration, in mg/L, as identified in the Code of Federal Regulations. Wastes with soluble concentrations above this value are considered hazardous for the purposes of disposal under federal regulations.

* = The cleanup goal for arsenic is 12 mg/kg

CITY OF LONG BEACH SOIL BORING PERMIT

CITY OF LONG BEACH

DEPARTMENT OF HEALTH & HUMAN SERVICES

2525 Grand Avenue Long Beach, CA 90815-1765 (562) 570-4134 FAX (562) 570-4038

WELL PERMIT

Permit # 1781

Date: February 2, 2012

All work must be completed in accordance with Water Well Bulletin 74-81 and 74-90

Site Address:

901 W. ANAHEIM ST.
Long Beach, CA

Owner:

ALERE PROPERTY GROUP LLC

Owner Address:

100 BAYVIEW CIRCLE, SUITE 310
NEWPORT BEACH, CA 92660
949-509-5002

Consulting Firm:

SCS ENGINEERS

Consulting Firm Address:

3900 KILROY AIRPORT WAY
LONG BEACH, CA 90806
562-426-9544

Drilling Company:

KEHOE TESTING & ENGINEERING

Drilling Company Address:

5415 INDUSTRIAL DR.
HUNTINGTON BEACH, CA 92649
714-901-7270

Method of Construction/Destruction: Borings are left and will be backfilled with hydrated bentonite

Number of Wells/Borings:

Soil Boring

This permit valid for one year from date above

Hans Tritten, REHS IV
Cross-Connection/Water Program

Re: ATL Work Order Number : 1200602

Client Reference : Former Long Beach Public Service Yard, 01210161.05

Enclosed are the results for sample(s) received on February 17, 2012 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

Eddie Rodriguez
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and its absence renders the report invalid. The report cannot be reproduced without written permission from the client and Advanced Technology Laboratories.

Subject: Summary Report Related to a Geophysical Survey at 949 West Anaheim Street and “Suspect” Wells at 1601 San Francisco Avenue, Long Beach, California

Dear Mr. Neuhoff:

This letter serves as SCS Engineers' (SCS) summary of activities related to a geophysical survey and “suspect” groundwater wells at 949 West Anaheim Street and 1601 San Francisco Avenue (respectively) in Long Beach, California (the “Property”).

BACKGROUND

The Phase I Environmental Assessment (Phase I) conducted by SCS for the Property (File No. 01210161.00 dated November 5, 2010) identified the possibility of a historical gas station (based on city directory listings) at 949 West Anaheim Street in 1931 and 1935; this gas station was not identified in 1929 or in the 1940s. Although this address was not a confirmed historical address on the Property, and there was no other evidence indicating its presence (building permits, aerial photos, etc.), this suspected historic service station was identified as a Recognized Environmental Condition. Based on the potential for contamination, a Phase II Investigation was conducted and findings summarized in SCS's Phase II Investigation Report (01210161.01 dated December 1, 2010). No evidence of contamination or historical service station operations was found during this investigation.

Wells Fargo's (the lender for the Property) environmental consultant, AEI Consultants (AEI) reviewed the work previously conducted by SCS and recommended a geophysical survey using ground penetrating radar (GPR) and magnetometer to further investigate the potential for underground storage tanks (USTs) on the Property. In addition, AEI proposed to conduct a camera survey and, as necessary, sample two suspect groundwater monitoring wells. In April 2012, SCS investigated these “suspect wells” and found they were not wells at all. The work summarized in this report is based on AEI's proposal dated June 21, 2012, and our discussions.

INVESTIGATION ACTIVITIES

Geophysical Survey

On July 3, 2012, under oversight of SCS, a geophysical survey was conducted by SubSurface Surveys & Associates, Inc. (SSS) on the southern portion of the Property in an area approximately 70 feet wide by 280 feet long using the following equipment:

- Electromagnetic (EM) Instruments: Geonic EM-61 and a Fischer TW-6 M-Scope
- Ground Penetrating Radar (GPR): Sensors and Software Noggin with a 500 MHz antenna
- Line Locators: Metrotech 9800 series and either a Ridgid Navitrack II or a Ridgid SR-60
- Magnetics: Schonstedt GA-52.

The geophysical survey (summarized in the enclosed SSS report, Attachment A) did not indicate the presence of any USTs. Several electromagnetic induction responses were encountered and were found to be the result of cutoff bollards, metal plates, perimeter fencing, reinforced concrete and junk rail/piping.

In addition, several GPR anomalies (identified as Anomalies #1 through #4) were identified. Anomaly #1 is the location of a recent geotechnical investigation trench that was recently patched with asphalt. The other anomalies were disturbed soil areas, however it was determined that none were likely to be the result of a previous UST excavation. Please refer to Attachment A for further details.

Investigation of "Suspect" Groundwater Wells

On April 19, 2012, SCS conducted an investigation of two suspect wells identified at 1601 San Francisco Avenue. Inspection of the two wells identified the following information:

- Building #20 "Well" – 6-inch diameter steel casing. Hard bottom at 4.6 feet below surface. One inch of water with trash at the bottom, no well screen, no cap, no valves.
- Building #14 "Well" – 6-inch diameter steel casing. Hard bottom at 5.2 feet below surface. Dry bottom, no well screen, no cap, no valves. A small (about 1 inch) diameter hole was noted about 3 feet below surface in the side of the steel casing.

The purpose/use of these steel pipes is unknown; however it is evident that these are not groundwater wells. Further, none of the previous environmental investigations on the property appear to have included groundwater wells at these locations. The traffic-rated steel covers over these steel pipes that are labeled "monitoring wells" appear to have been only used for convenience by city service yard employees. The well covers may have been used for an unidentified subsurface utility or perhaps as a training exercise for public service workers.

SUMMARY AND CONCLUSIONS

In November 2010 SCS conducted an investigation of the area of the suspected historic gas station, summarized in the Phase II Investigation Report, dated December 1, 2010, which found

no evidence of contamination or historical service station operations. In addition, no evidence of USTs was found during the geophysical survey conducted on July 3, 2012. In summary, city directories indicated a gas station may have been located on the Property, although unconfirmed by any other supporting data. Nonetheless, the historical gas station was only present for a period of 5 to 10 years and the area where it was potentially located was investigated in November 2010 and no evidence of contamination was identified. In addition, the results of the geophysical survey for this report did not identify any existing USTs or likely UST excavations. Based on this information, it is SCS's opinion that further investigation regarding the historical gas station is not warranted.

In addition, the two steel pipes located at 1601 San Francisco Avenue were investigated and found not to be groundwater monitoring wells. Although the purpose of the steel pipes is unknown, it is SCS's opinion that further investigation of these features is not warranted.

DISCLAIMER

This report has been prepared for Alere Property Group, LLC with specific application to a geophysical survey and investigation of "suspect" wells at the former Long Beach Public Service Yard in Long Beach, California. This report has been prepared in accordance with the care and skill generally exercised by reputable professionals, under similar circumstances, in this or similar localities. No other warranty, express or implied, is made as to the professional opinions presented herein. No other party, known or unknown to SCS, is intended as a beneficiary of this work product, its content or information embedded therein. Third parties use this document at their own risk.

Please call either of the undersigned at (562) 426-9544 if you have any questions.

Sincerely,

Ashley P. Hutchens

Re: Geophysical Survey, UST/Excavation Survey, 901 West Anaheim Street, Long Beach, California.

This report is to present the results of our geophysical survey carried out over portions of property located at 901 West Anaheim Street in Long Beach, California (Figure 1), on July 3rd, 2012. Purpose of the survey was to locate and identify, insofar as possible, the existence of any underground storage tanks (USTs), backfilled excavations, piping, conduit, and other buried features that may exist within the survey boundaries for guidance in future drilling activities.

A combination of electromagnetic induction (EM) and ground penetrating radar (GPR) were applied to the search. A utility locator with line tracing capabilities was also brought to the field and used where risers exist onto which a signal could be impressed and traced.

Survey Design – The area to be surveyed was indicated in the field by the client, which included an area in the southern portion of the property measuring approximately 70 feet wide and 280 feet long. The magnetic gradiometer, line tracer, EM61, M-Scope and GPR were systematically free traversed in many directions within the survey boundaries. Additional traverses were taken, access permitting, for detailing and confirmation where anomalous conditions were found. Multiple GPR profiles were also collected throughout the area and in specific areas for confirmation where other instruments detected anomalies. The line tracer was also used to trace out all detectable utilities in the area.

The line tracers were used to impress signals onto pipes, generally through accessible risers and tracer wires when present, to delineate the lines' locations and orientations. The instruments were also used in passive mode, configured to detect 60 Hz electrical signals and other common radio-frequency signals.

A rectilinear grid that measured approximately 65' by 280' was established over the survey area to guide data acquisition. The EM61 was then used to collect EM data at 0.66 foot intervals along east-west trending grid lines spaced 5-feet apart. This data was then downloaded in the field along with the office for further analysis and detailing where anomalous conditions were encountered.

A Geonic's model EM61 and a Fischer M-Scope was used for the EM sampling. A Sensors and Software Noggin Ground Penetrating Radar unit with a 500 MHz antenna produced the radar images. The magnetic gradiometer was a Schonstedt GA-52, and a Metrotech 9890 and RIDGID SR-60 SeekTech utility locator rounded out the tools applied.

Brief Description of the Geophysical Methods Applied - The EM61 instrument is a high resolution, time-domain device for detecting buried conductive objects. It consists of a powerful transmitter that generates a pulsed primary magnetic field when its coils are energized, which induces eddy currents in nearby conductive objects. The decay of the eddy currents, following the input pulse, is measured by the coils, which in turn serve as receiver coils. The decay rate is measured for two coils, mounted concentrically, one above the other. By making the measurements at a relatively long time interval (measured in milliseconds) after termination of the primary pulse, the response is nearly independent of the electrical conductivity of the ground. Thus, the instrument is a super-sensitive metal detector. Due to its unique coil arrangement, the response curve is a single well-defined positive peak directly over a buried conductive object. This facilitates quick and accurate location of targets.

The GPR instrument beams energy into the ground from its transducer/antenna, in the form of electromagnetic waves. A portion of this energy is reflected back to the antenna at a boundary in the subsurface across which there is an electrical contrast. The instrument produces a continuous record of the reflected energy as the antenna is traversed across the ground surface. The greater the electrical contrast, the higher the amplitude of the returned energy. The radar wave travels at a velocity unique to the material properties of the ground being investigated, and when these velocities are known, the two-way travel times can be converted to depth. The depth of penetration and image resolution produced are a function of ground electrical conductivity and dielectric constant.

The magnetic gradiometer has two flux gate magnetic fixed sensors that are passed closely to and over the ground. When not in close proximity to a magnetic object, that is, only in the earth's field, the instrument emits a sound signal at a low frequency. When the instrument passes over a buried iron or steel object, so that locally there is a high magnetic gradient, the frequency of the emitted sound increases. The frequency is a function of the gradient between the two sensors.

The M-Scope device energizes the ground by producing an alternating primary magnetic field with AC current

in a transmitting coil. If conducting materials are within the area of influence of the primary field, AC eddy currents are induced to flow in the conductors. A receiving coil senses the secondary magnetic field produced by these eddy currents, and outputs the response as anomalous conditions. The strength of the secondary field is a function of the conductivity of the object, say a pipe, tank or cluster of drums, its size, and its depth and position relative to the instrument's two coils. Conductive objects, to a depth of approximately 7 feet below ground surface (bgs) for the M-Scope are sensed. The device is also somewhat focused; that is, it is more sensitive to conductors below the instrument than they are to conductors off to the side.

The line locator is used to passively detect energized high voltage electric lines and electrical conduit (50-60 Hz), VLF signals (14-22 kHz), as well as to actively trace other utilities. Where risers are present, the utility locator transmitter can be connected directly to the object, and a signal (9.8-82 kHz) is sent traveling along the conductor, pipe, conduit, etc. In the absence of a riser, the transmitter can be used to impress an input signal on the utility by induction. In either case, the receiver unit is tuned to the input signal, and is used to actively trace the signal along the pipe's surface projection.

Interpretation and Conclusions - The interpretation took place in real time as the survey progressed, and accordingly, the findings of our investigation were marked on the ground cover with spray marking paint and further documented with a Site Interpretation Map (Figure 2), photographs of the surveyed area (Figures 3-15), along with radar images of each anomaly (Figures 16-19).

There were no USTs detected within the survey area specified by the client. The gridded EM61 data in Figure 2 shows multiple high EM responses. All of these areas were further detailed with the geophysical instruments and it was determined that the high EM responses were the result of cutoff bollards, metal plates, perimeter fencing, reinforced concrete and junk rail/piping.

GPR was useful at detecting both metallic and non-metallic lines and utilities. According to principles of physics, radar penetration is a function of soil conductivity and dielectric constant. At this site, local conditions were favorable for radar penetration due to the nature of the soil and materials covering the survey area. This resulted in radar penetration down to approximately 3.5 to 4.0 feet bgs. There were 4 GPR anomalies detected within the survey boundaries specified by the client. Three of the GPR anomalies were marked and delineated with pink marking paint (Figures 3-10), while the other GPR anomaly was marked with yellow marking paint (Figures 11 and 12).

GPR Anomaly #1 is centered at X=20, Y=65 and measures approximately 20 feet wide and 20 feet long. The anomaly coincides with an existing asphalt patch. The reason for the asphalt patch is unknown; however, GPR profiles collected over this feature show subtle imagery to suggest a backfilled excavation. There were no significant high EM signatures within the borders of GPR Anomaly #1. In addition there was no radar evidence of a tank-like image. So it can be concluded that there was no geophysical evidence for the existence of an underground storage tank; however, a backfilled excavation is more likely.

GPR Anomaly #2, approximately 10 feet wide and 7 feet long, is center at X=23, Y=24 (Figures 4-7). It was visually observed that a small depression was present in the center of this anomaly. Radar imagery has strong supporting evidence that previous digging and/or excavating activities occurred here as the soil consistencies within this anomaly are vastly different to the nearby, outer surrounding soils (Figures 17 and 18). These are similar characteristics to a backfilled excavation. An unknown line was also found to terminate within the borders of this anomaly. However, due to the small size of this anomaly, it is unlikely that an underground storage tank formerly existed here. Ground truthing and further investigation by SCS Engineers may be necessary to confirm the source of this unknown anomaly.

GPR Anomaly #3 is 30 feet long and stretches continuously from the southern edges past the northern edges of the survey area. This anomaly runs along the X-axis between Y=160 and 190 (Figures 8-10). Radar imagery shows a slight slant in the soils leading to more underground disturbed soils in the center of this anomaly (Figure 19). It appears these soils are relatively jumbled as compared to the nearby surrounding soils which suggest that previous digging and/or excavating activities occurred here. This anomaly extends significantly further north as a few radar passes were taken north the survey area in line with this anomaly. Because it extends relatively farther north, it is unlikely the suggested digging and/or excavating activities is related to an underground storage tank removal. There were no other high EM signatures, with the exception of aboveground objects, that were detected within this anomaly.

The other anomaly, GPR Anomaly #4, was located on the eastern edges just west of the reinforced concrete pad (Figures 11 and 12). Although radar imagery was not captured, it was concluded that the radar response from numerous traverses suggested these soils have been disturbed through some means, whether it be through excavating, digging or perhaps the ground settling. There were multiple high EM signatures within the boundaries of this anomaly; however, each signature was accounted for and was confirmed to be associated with aboveground metallic objects (i.e. reinforced concrete, junk rail, cutoff posts, etc). These soil disturbances may be associated with the recent construction activities that were done when the previous building was removed which was located on top of the existing reinforced concrete.

Piping and utilities detected during the survey were marked with spray marking paint on the ground cover, using yellow for soil disturbances, red for electric, green for sanitary sewer/storm drain, white for unknown utility type and pink for GPR Anomalies.

There were three reasonable candidate anomalies for a backfilled excavation; GPR Anomalies #1, #2 and #3. There were no other anomalies detected within the survey boundaries that would qualify as backfilled excavation-like candidates. Please note that there were no underground storage tanks detected. Please use the site interpretation map along with the markings in the field for a better representation of our findings.

Limitations and Further Recommendations - It should be understood that limitations inherent in geophysical instruments and/or surveying techniques exist at all sites, and nearly all sites exhibit conditions under which instruments might not perform optimally. Consequently, the detection of buried objects in all circumstances **cannot be guaranteed**. Such limitations are numerous and include, but are not limited to, rebar-reinforced ground cover, abrupt changes in ground cover type, above-ground obstacles preventing full traverses or traverses in one direction only, above-ground conductive objects interfering with instrument signal, nearby powerlines or EM transmitters, highly conductive background soil conditions, limiting GPR penetration, non-metallic targets, shallower or larger objects shielding deeper or smaller targets, tracing signal jumping from one line to another, and inaccessible risers, cleanouts, valve boxes, and manholes. If one or more geophysical instrument is rendered ineffective and cannot be utilized, the quality of the survey can be somewhat degraded.

For the above reasons, and in the interest of maximum safety, we encourage our clients to take advantage of Underground Service Alert (USA), Dig Alert, or other similar services, when possible. Furthermore, we recommend hand-auguring and the use of a drilling method known as air knifing and vacuum extraction, when feasible or if applicable to this project. These methods may significantly limit damage to underground pipes, conduits, and utilities that might not have been detectable during the course of this survey. Please bear in mind, that geophysical surveying is only one of several levels of protection that is available to our clients.

SubSurface Surveys may include maps in some reports. While they are an accurate general representation of the site and our findings, they are not of engineering quality (i.e., measured and mapped by a licensed land

surveyor).

SubSurface Surveys and Associates makes no guarantee either expressed or implied regarding the accuracy of the findings and interpretations present. And, in no event will SubSurface Surveys and Associates be liable for any direct, indirect, special, incidental, or consequential damages resulting from interpretations and opinions presented herewith.

All data acquired in these surveys are in confidential file in this office, and are available for review by your staff, or by us at your request, at any time. We appreciate the opportunity to participate in this project. Please call, if there are questions.

1 INTRODUCTION

SCS Engineers (SCS) was retained by the City of Long Beach Department of Public Works to provide oversight during the removal of two clarifiers located at the former Long Beach Public Service Yard (LBPSY), 1725 San Francisco Avenue, Long Beach, California (the “Property”). Clarifier removal activities were conducted in accordance with SCS’s proposal dated November 13, 2012 (File No. 011018212). A location map for the Property is presented as **Figure 1**.

2 BACKGROUND

Two clarifiers, associated with a car wash area and paint rinse/cleaning area, were located on the eastern side of the Property approximately 50 and 90 feet west of San Francisco Avenue. The clarifiers are located in an area where there is known historic debris/fill material.

In 2005, SCS collected soil and soil vapor samples from the Property, several of which were in areas of the paint and car wash clarifiers. Volatile organic compounds (VOCs) were not detected in soil or soil vapor samples in these areas. In addition, total petroleum hydrocarbons (TPH) were not detected in a sample collected near the car wash clarifier (the sample adjacent to the paint clarifier was not analyzed for TPH). A 5-foot soil sample near the car wash clarifier was also analyzed for and contained elevated concentrations of metals, including arsenic, chromium, copper, lead, nickel and zinc. In particular, lead was detected in this sample at a concentration of 2,400 milligrams per kilogram (mg/kg). SCS prepared and submitted a Remedial Action Plan (RAP) for the removal of the debris/fill in March 2012. The City of Long Beach Department of Health and Human Services (DHHS) approved the RAP on March 8, 2012. The lead-impacted soils on the Property (including those in the clarifier areas) are to be remediated as indicated in the approved RAP. Remedial activities are scheduled to commence in April 2013.

3 ENVIRONMENTAL SETTING

PHYSIOGRAPHIC SETTING

According to the U.S. Geological Survey (USGS), Long Beach (1964, photorevised 1981), California 7.5-minute topographic map, the Property is located at an elevation of approximately five feet above mean sea level, immediately east of the Los Angeles River and about 1.3 miles north of San Pedro Bay. Regional topography is relatively flat with a gentle slope to the west.

GEOLOGY AND SOILS

Geologic maps indicate that surface sediments in the area are Quaternary alluvium and coastal deposits of silt, sand, and gravel that are underlain by the late Pleistocene Lakewood Formation. The Lakewood Formation, which consists of gravel, sand, sandy silt, silt and clay with shale pebbles, extends to a depth of approximately 100 feet (California DWR, Bulletin No.104). Sediments below the Lakewood Formation belong to the late Pleistocene San Pedro Formation.

GROUNDWATER

The Property is located in the southern portion of the West Coast Groundwater Basin. The first groundwater aquifer in the region is within the Gage Aquifer within the Lakewood Formation. Based on groundwater monitoring reports for a former UST site located in the 14th Street right-of-way on the north boundary of the Property, first groundwater is approximately 4 to 5 feet below grade and flows southeasterly in direction. Shallow groundwater has locally been impacted by saltwater intrusion; therefore, it is not used as a drinking water source. Groundwater beneath the Property may be tidally influenced due to tides in the adjacent Los Angeles River.

4 CLARIFIER REMOVAL

Clarifier abandonment activities were conducted on January 15, 2013. Moine Bros. provided equipment and operators to conduct the removal activities with oversight conducted by SCS. Moine Bros. contacted Underground Service Alert prior to initiating removal activities. The scope-of-work for the clarifier removals involved the following: obtaining required permits, shoveling the accumulated sludge from the clarifiers, pressure rinsing, pumping liquids from clarifiers and disposing of the removed liquids and sludge under proper manifest, disposal of the clarifiers, capping the sewer line, and backfilling.

A permit for the clarifier removal was obtained from the Long Beach Fire Department (LBFD), a copy of which is provided in **Appendix A**. The clarifier was removed in general accordance with the LBFD requirements for underground storage tanks. LBFD inspector, Mr. Tim Buzbee, provided oversight of the removal and associated soil sampling activities. A copy of the LBFD Inspection Record is also provided in **Appendix A**.

Prior to removal, the sludge and water in the clarifiers were placed into 55-gallon drums. A backhoe equipped with a breaker bar was used to break up and remove the concrete surrounding both of the clarifiers. Both clarifiers were removed intact and the surrounding soils were excavated and stockpiled next to the pulled clarifiers. Upon removal, the clarifiers were both observed to be metal and measured to be 3 feet in length by 2 feet wide by 3 feet high. The locations of the clarifiers are depicted on **Figure 2**.

SOIL SAMPLING

After their removal, samples were collected from the bottom of each clarifier pit in native soil as specified by the LBFD. Sampling was completed under the direction of Kevin Green of SCS, a California Professional Geologist. Soil samples were collected at a depth of 6 feet below ground surface (bgs) in both excavations. The fill material above the native soils in both excavations consisted of brown silty sand. Debris (glass, metal, and wood ash) was observed in the car wash excavation, likely related to previous filling activities. A composite soil sample was also collected from each of the associated soil stockpiles. Samples from the car wash clarifier were designated with the notation “WC” (i.e. WC-SP was collected from the car wash clarifier stockpile) and samples from the paint clarifier were designated with the notation “PC.” Sample locations are shown on **Figure 2**.

Soil samples from the clarifier excavations were collected in 4-ounce glass jars directly from the bucket of the backhoe. Each soil sample was prepared for analysis in the field using EPA Method 5035, which includes collecting three 5-gram aliquots of soil using a plunger/sub-sampler provided by the laboratory. The three aliquots of soil were immediately placed in 40 milliliter VOA (volatile organic analysis) vials as follows: two aliquots in VOAs with a sodium bisulfate preservative and one aliquot in a methanol preservative.

Following labeling, samples were placed in a chilled ice chest for transportation to Chemtek Environmental Laboratories Inc. (Chemtek) of Santa Fe Springs, California. The samples from both the excavations and the stockpiles were analyzed for TPH by EPA Method 8015M, VOCs by EPA Method 8260B, and California Code of Regulations (CCR) Title 22 metals by EPA Method 7000 series.

Analytical Results

The Chemtek laboratory report, including chain-of-custody documentation and quality assurance/quality control (QA/QC) data, is provided in **Appendix B**.

As shown on **Table 1**, TPH was not detected in any of the analyzed soil samples. Benzene, toluene, methyl ethyl ketone (MEK), and acetone were the only VOCs detected, at low concentrations ranging from 1 to 35 micrograms per kilogram. As shown on **Table 2**, concentrations of metals were within the typical background ranges for California soils, with the exception of lead in the composite samples from both stockpiles. Lead was detected at a concentration of 173 mg/kg at the paint clarifier stockpile and 631 mg/kg at the car wash clarifier stockpile. As previously discussed, remediation of lead-impacted soils is scheduled to commence in April 2013 with the oversight of the DHHS. Lead concentrations in native soil samples collected at 6 feet bgs were well below the cleanup goal of 320 mg/kg at 4.4 and 8.9 mg/kg, respectively.

BACKFILL

The stockpiled soil was used to backfill the excavations following clarifier removal. In addition, stockpiled soil from the Property was used to complete the backfill for safety reason. A sheet of visqueen separates the two materials in both excavations. The backfill was compacted by running the backhoe over the area numerous times. These areas will be re-excavated during grading and/or remedial excavation activities as previously discussed.

WASTE DISPOSAL

Upon removal, the interior of the clarifiers were high-pressure rinsed with water and the liquid contents were pumped into 55-gallon drums. The sludge and associated liquids were sampled for VOCs by EPA Method 8260B, TPH (carbon chain analysis, TPH-cc) by EPA Method 8015M, and Title 22 metals by EPA Method 7000 series. Upon characterization and profiling as non-hazardous wastes, the sludge was transported to the Soil Safe facility in Adelanto, California for disposal/treatment and the water was taken to K-Pure Waterworks in Rancho Cucamonga, California. A copy of the non-hazardous waste manifest is included in **Appendix C**.

The clarifiers and associated catch basins were disposed of/recycled by Moine Bros. A certificate of disposal is provided in **Appendix D**. After the clarifiers were removed, the sewer lines were sealed/capped.

SUMMARY

In summary, on January 15, 2013 two clarifiers located at the former Long Beach Public Service Yard, 1725 San Francisco Avenue, Long Beach, California were removed and the sewer lines were capped/sealed with oversight provided by the Long Beach Fire Department. No significant impacts from VOCs or TPH were identified in association with the clarifiers. Lead was detected at concentrations of 173 and 631 mg/kg in soil excavated from the paint and car wash clarifiers, respectively. The elevated lead concentrations are associated with debris/fill material previously placed on the Property. The lead-impacted soil associated with the debris will be remediated in the near future (planned for April 2013) with oversight by the Long Beach DHHS.

SITE MAP INSTRUCTIONS

Site map shall indicate site address, nearest cross streets and property lines.

CLARIFIER REMOVAL PLAN NOTES:

SITE: CITY OF LONG BEACH FORMER PUBLIC SERVICE YARD
1445 SAN FRANCISCO AVENUE, LONG BEACH, CA 90813

Long Beach Fire Department will be contacted a minimum of 72 hours prior to start of work.

Removal will be by "Removal Method #2 – Clean" as follows:

The (2) clarifiers will be cleaned "on-site", "certificated" by a certified Marine Chemist or by a Certified Industrial Hygienist as clean, vapor free. The cleaned and certificated clarifiers will be demolished in place and transported (with their certification) off site for material recycling.

Prior to starting work:

1. Barriers, caution tape, and "No Smoking" signs will be installed to keep any source of ignition at least 25' away from the excavations; two each min. 2A,20B:C fire extinguishers will be available on site.
2. A Long Beach Fire Dept. Inspector must be on site to witness the dry ice procedure. Place a minimum of **twenty-five (25) pounds dry ice per 1,000 gallons capacity** into the clarifiers.
3. Within two hours after dry icing the tank, a Long Beach Fire Dept. Inspector will return to the site and witness the contractor take oxygen content readings. **Oxygen content of the clarifiers' atmospheres shall be below five percent, at which point the clarifiers shall be considered inerted. (NFPA 306) It is mandatory that a properly calibrated flammable/combustible gas analyzer (LEL meter) and oxygen indicator, certified within 90 days, be on the job site from start to finish.**
4. Work may begin only when permission is given by the Fire Inspector. Excavate and expose the sides of the clarifiers. Identify all piping associated with and relative to the clarifiers. Disconnect all piping from the clarifiers, making observations for any waste leakage. CONTINUOUS SUPERVISION MUST BE MAINTAINED DURING THE OPERATIONS BY A COMPETENT AND RESPONSIBLE ADULT EMPLOYEE OF THE CONTRACTOR NAMED ON THE REMOVAL PERMIT.
5. Use vacuum truck equipment following bonding procedures. TAKE FREQUENT LEL READINGS.
6. Water-blast the clarifiers' interiors using a minimum of 2,000 psi water; also use detergent if necessary. Loose scale, sludge, and rinse water are removed by the vacuum truck. The washing may cease when the sludge and debris is removed and the LEL is 0%. Grounding and bonding procedures shall be followed with water-blasting equipment.
7. Interior rinse water and sludge shall be manifested and transported to a fully approved and permitted TSD facility by a Licensed Hazardous Waste Transporter, subject to all applicable governmental regulations. A copy of the manifest shall be given to the Long Beach Fire Inspector on site before the clarifiers are removed.
8. A certified Marine Chemist or a Certified Industrial Hygienist shall inspect the clarifiers and issue a certificate stating that the clarifiers are clean and vapor free. A copy of the certificate must be given to the Long Beach Fire Inspector on the site.

Underground Tank Removal Plan Notes, continued:

9. Soil samples from beneath the clarifiers will be required and witnessed by a Long Beach Fire Dept. Inspector. See Long Beach Health Department Requirements (See pages ~~24-25~~ ^{#1-5}).
10. Soil piles shall be placed on heavy-duty plastic to avoid possible site contamination, and soil piles and excavation shall be covered with heavy-duty plastic sheets. Fencing and signage shall be provided to the satisfaction of the Long Beach Fire Dept. Inspector.
11. Soil sampling will be as follows:
Upon removal of the clarifiers, soil samples will be collected at a depth of two feet below the bottom of each end of each clarifier. Stockpile samples will be collected for characterization of the excavated soils. Samples will be collected by driving a wide-mouth glass jar or stainless steel or brass sample sleeve into the soil. If this cannot be accomplished, a pre-cleaned hand trowel will be used to scoop soils into the jar or sample sleeve. Soil will be tightly packed into the pre-cleaned sample containers, and the sample containers will be labeled, sealed with solvent-free polyethylene tape, and placed into a chilled ice chest and transported to the analytical laboratory using standard chain-of-custody procedures. Samples will be analyzed for VOCs, TPH, and metals using EPA Methods 5035/8260B, 8015M (carbon chain), and 6000/7000 series, respectively. All sampling will be conducted by a California Registered Geologist in accordance with Long Beach Health Dept. requirements and under the direction of a Long Beach Fire Dept. Inspector.

The above notes have been prepared by:

Virgil Cicoria
Project Manager, Moine Bros.

INSPECTORS CHECKLIST

APPOINTMENT DATE AND TIME: _____

Prior to Starting Work and Arrival of Inspector:

1. Fence, barriers, colored tape around work area _____
2. Two (2) fire extinguishers, minimum 2A – 20BC _____
3. Posted "No Smoking" signs _____
4. Draft product _____ Manifest with amount _____
5. DEGAS _____ Removal dispenser(s) _____

Arrival of Inspector:

1. Dry ice tank(s) Method #1-Hazardous (22 lbs per 1000 gallon minimum) _____
2. Dry ice tank(s) Method #2-Clean (22 lbs per 1000 gallon minimum) _____

Two Hours Later – Return of Inspector:

1. LEL and oxygen meters (tag-dated calibration within 90 days) _____
2. Oxygen at 5% or lower _____
3. Permission to break ground _____ Time _____

After Ground Breaking:

1. Disconnect all associated underground piping _____
2. Tank(s) cut and triple rinsed (Method #2) _____
3. Marine Chemist or Industrial Hygienist certification (Method #2) _____

Moving Tanks – Witnessed by Inspector:

1. Remove tank(s) as hazardous waste (Method #1) or certified clean (Method #2) _____
2. Inspect tank(s) for holes, cracks, etc. _____
3. Remove all soil from tank(s) – using non-sparking equipment _____
4. Load on truck(s) and strap down _____
5. Collect tank(s) manifest and deliver to Inspector _____ and driver hauling tank(s) _____

Soil Sampling – Witnessed by Inspector:

1. Soil samples taken and location noted on site map _____
2. Brass sleeves or glass jars with a Teflon sealer only _____
3. Health Department evidence tape on soil samples _____
4. Put on ice immediately _____

Before Leaving Site:

1. Cover spoils pile (contaminated soil) with securely anchored heavy-duty plastic sheets _____
2. Six foot (6') fence around excavation _____ or;
3. Line contaminated excavation with heavy duty plastic sheets _____ and;
4. Backfill immediately with clean fill dirt _____

Required Paperwork:

1. Copy of hazardous waste manifest for residual product _____
2. Copy of hazardous waste manifest for rinseate _____
3. Copy of Marine Chemist or Certified Industrial Hygienist Certification _____

08/04/08

City of Long Beach

Department of Health and Human Services

Environmental Health, Hazardous Materials Division

CUPA (Certified Unified Program Agency)

2525 Grand Avenue, Room 222, Long Beach, California 90815

POST TANK REMOVAL GUIDELINES

- A. Soil samples will be required from beneath tanks, dispensers, pipes and spoils pile. Sampling must be witnessed by an Inspector from the City of Long Beach Fire Department.
- B. Analyses of the samples are indicated on pages 5 and 6 under **Laboratory Analyses**. **Soil sampling guidelines** and the format for the required **Soil Sampling Report** can be found on page 2. This report must be submitted to City of Long Beach Department of Health and Human Services (LBDHHS) within **14 days** of sampling.
- C. All excavated soil must be retained on site until the LBDHHS has reviewed the Soil Sampling Report. Excavated contaminated soil must be handled in compliance with the South Coast Air Quality Management District's Rule 1166 regarding volatile organic compound (VOC) emissions from contaminated soil.
- D. All soil excavated during removal of an underground storage tank is considered contaminated until proven otherwise by laboratory analysis performed by a California certified environmental laboratory. Leaking underground fuel tank (LUFT) contaminated soil, once it has been excavated, becomes waste. The contaminated site and the excavated soil must be treated under the authority of the Porter Cologne Water Quality Control Act (Water Code). The soil to be placed into a tank excavation must be either the excavated soil that has been deemed acceptable or remediated to the satisfaction of the LBDHHS, or clean imported soil, as proven by laboratory analysis by a California certified environmental laboratory. The LBDHHS does not stipulate how long an excavation can remain open as long as precautions have been taken by the responsible party to assure the avoidance of any potential public danger.
- E. All stockpiles shall be covered with heavy duty, continuous plastic sheet(s), joined at the seams and securely anchored to prevent any exposure of soil to the atmosphere.
- F. The site shall be temporarily fenced to a height of six feet.
- G. If an excavation is left in an unsafe condition, the property will be returned to a safe condition by the City of Long Beach and all costs incurred will be charged to the owner/permittee.
- H. Within **30 days** of tank removal, a **Tank Removal Report** (see page 4) and a **fee of \$ 225.00** for the project review must be mailed to the City of Long Beach Department of Health and Human Services, Division of Hazardous Materials: 2525 Grand Avenue, Suite 222, Long Beach, CA 90815.
- I. In addition, a **copy** of the report must be mailed to the **Long Beach Fire Department**: 3205 Lakewood Blvd, Long Beach, CA 90808.

SOIL SAMPLING GUIDELINES

1. Soil samples from beneath the dispensers, pipes, spoil piles and tank(s) will be required and witnessed by a Long Beach Fire Department Inspector. Samples must be taken 2 to 4 feet below the tank invert, the product lines (at 20 foot intervals) and from each dispenser.
2. Accepted sampling methods are: Split-barrel core sampler, modified California sampler, Shelby Tube, or other accepted method.
3. Core samples are to be collected using a volumetric sampling system designed to collect, store and deliver a soil sample. To preserve and minimize organic losses, the EPA Method 5035 specified in USEPA SW- 846, version (April 1998), or subsequent edition is to be used.
4. Soil sampling must be done under the direct supervision of a California Professional Geologist (PG).

The **Soil Sampling Report** is a preliminary assessment through documentation of the subsurface conditions from the open excavation where a tank was removed and is considered the minimum documentation required before the backfilling of an open excavation.

SOIL SAMPLING REPORT (FORMAT)

1. **SITE HYDROGEOLOGY**
 - a. Indicate depth to groundwater, aquifer system and local use of groundwater.
 - b. If groundwater is encountered, grab water samples must be obtained from a Hydropunch TM or similar type of system and properly analyzed. Because these sample results are not repeatable, they will be considered qualitative measurements. Also, the results will determine if the water is to be disposed of as hazardous waste.
2. **SOIL SAMPLING** Samples are to be collected using a volumetric sampling system designed to collect, store and deliver a soil sample. To preserve and minimize organic losses, EPA Method 5035 specified in USEPA SW-846, version (April 1998) or subsequent version is to be used. Samples must be tested by a laboratory with certification under the California Environmental Laboratory Accreditation program (ELAP).
3. **SITE GEOLOGY**
 - a. Submit cross-section of subsurface discovered during tank excavation.
 - b. Describe soil lithology.
4. **SOIL TEST RESULTS**
5. **MANIFESTS**
 - a. Tank disposal. Certification by Marine Chemist or Industrial Hygienist)
 - b. Rinseate disposal.
 - c. Contaminated soil disposal.
6. **CONCLUSIONS**
 - a. Recommend any additional work (site characterization.).
 - b. Recommend no additional work (closure)

7. SIGNATURE/STAMPS REQUIRED FROM ONE OF THE FOLLOWING:

- a. California Professional Civil Engineer (PE).
- b. California Professional Geologist (PG).

The Tank Removal Report requirements are as follows:

Tank Information

- a. Date tank(s) removed and contents samples.
- b. Number of tanks removed.
- c. Stored product.
- d. Tank capacity.
- e. Age of tank.
- f. Tank construction material.
- g. Tank disposal documentation: Removal as hazardous waste (manifested), or as scrap metal (Certification by a Marine Chemist or Industrial Hygienist).
- h. Product disposal documentation: manifest if tank is destroyed to be rendered as scrap metal.

2. Tank Removal

- a. Describe removal procedure.
- b. Monitor excavated soil for air emissions to comply with SCAQMD rule 1166.

3. Site Plan

- a. Show location of -tanks, sampling points building, piping and pumps.
- b. Show adjacent streets.
- c. North arrow.
- d. Area of excavation.

4. Soil Sampling Report

5. Underground Storage Tank Unauthorized Release Report (Leak) / Contamination Site Report

6. Important Information to Remember

- a. A California LUFT GCIFID Fingerprint Carbon Chain Analysis must be provided regardless of previous contents inside tank(s) in addition to other analysis.
- b. Laboratory data and chain of custody attached to corresponding reports must be original.
- c. Depth to groundwater must be provided.
- d. Soil samples (**native** soil only) must be provided from the following locations:
- e. At least two soil samples, one from either end of the tank excavation.
- f. At least one soil sample from under each dispenser.
- g. At least one sample from the spoils pile.

Ethanol	Cal-LUFT GC/FID (EPA8260B)	500	250

Source: California Regional Water Quality Control Board, Los Angeles Region, UST Lab Requirements For Oxygenates (09/06)

Report any concentration detected between the method detection limit (MDL) and estimated quantification limit (EQL) or reporting limit (RL) in a numerical value with a "J" flag indicator. All **"Non-Detect" (ND)** shall be reported in a format with **"< (numerical MDL)."** Integrate all fuel oxygenate additive concentration into total petroleum hydrocarbons (TPH) and report it as TPH. EPA Method 8260B may be used to substitute EPA Method 8260B at the sites where all fuel oxygenates have not been identified by EPA Method 8260B in soil and/or groundwater.

INSPECTORS CHECKLIST

APPOINTMENT DATE AND TIME: 1/15/2013, 8:00 AM

Prior to Starting Work and Arrival of Inspector:

1. Fence, barriers, colored tape around work area
2. Two (2) fire extinguishers, minimum 2A – 20BC
3. Posted "No Smoking" signs
4. Draft product _____ Manifest with amount _____
5. DEGAS _____ Removal dispenser(s) _____

} NA

1-15-13
1-15-13
1-15-13

Arrival of Inspector:

1. Dry ice tank(s) Method #1-Hazardous (22 lbs per 1000 gallon minimum)
2. Dry ice tank(s) Method #2-Clean (22 lbs per 1000 gallon minimum)

NA { _____

Two Hours Later – Return of Inspector:

1. LEL and oxygen meters (tag-dated calibration within 90 days)
2. Oxygen at 5% or lower
3. Permission to break ground _____ Time _____

NA { _____

After Ground Breaking:

1. Disconnect all associated underground piping
2. Tank(s) cut and triple rinsed (Method #2)
3. Marine Chemist or Industrial Hygienist certification (Method #2)

1-15-13
1-15-13
NA

Moving Tanks – Witnessed by Inspector:

1. Remove tank(s) as hazardous waste (Method #1) or certified clean (Method #2)
2. Inspect tank(s) for holes, cracks, etc.
3. Remove all soil from tank(s) – using non-sparking equipment
4. Load on truck(s) and strap down
5. Collect tank(s) manifest and deliver to Inspector _____ and driver hauling tank(s)

1-15-13 { _____

Soil Sampling – Witnessed by Inspector:

1. Soil samples taken and location noted on site map
2. Brass sleeves or glass jars with a Teflon sealer only
3. Health Department evidence tape on soil samples
4. Put on ice immediately

1-15-13
1-15-13
1-15-13
1-15-13

Before Leaving Site:

1. Cover spoils pile (contaminated soil) with securely anchored heavy-duty plastic sheets
2. Six foot (6') fence around excavation _____ or;
3. Line contaminated excavation with heavy duty plastic sheets _____ and;
4. Backfill immediately with clean fill dirt

1-15-13
1-15-13
1-15-13

Required Paperwork:

1. Copy of hazardous waste manifest for residual product
2. Copy of hazardous waste manifest for rinseate
3. Copy of Marine Chemist or Certified Industrial Hygienist Certification

CERTIFICATE OF ANALYSIS

Job No. 301046

Date: 01-22-13

This is the Certificate of Analysis for the following samples:

Client : SCS Engineers
Contact person : Aaron Garrett
Project # : 01212361.00
Project Site : Former LB Public Service Yard
1725 San Francisco Ave, LB
Date of sample : 01-15-13
Date received : 01-15-13
Number of samples : 4
Sample matrix : soil

Samples were labeled as follows

<u>SAMPLE IDENTIFICATION</u>	<u>DATE SAMPLED</u>	<u>LABORATORY NUMBER</u>
PC1-6	01/15/13	301046-01A
PC-SP	01/15/13	301046-02A
WC1-6	01/15/13	301046-03A

**Subject: Summary of Site Characterization Activities and Analytical Data
Former Long Beach Public Service Yard
1725 San Francisco Avenue, Long Beach, California (the "Property")**

Dear Mr. Anthony:

SCS Engineers is providing this letter to describe site characterization activities recently conducted at the Former Long Beach Public Service Yard as a part of the proposed redevelopment of the Property by Alere Property Group LLC. Upon completion of clearing and grubbing the Property, SCS conducted two days of field activities (April 24 and 25, 2013), to assess the extent of lead-impacted soils onsite. On April 24, 2013, SCS used an X-Ray fluorescence (XRF) analyzer to screen surface soils in the field for lead concentrations. Nine soil samples were also collected for analysis at a fixed laboratory (Chemtek Environmental Laboratories, Inc.) to confirm and compare the results with the XRF screening data. Analytical results showed good correlation between the XRF as a screening tool and laboratory analytical results (enclosed Chemtek report dated April 25, 2013). The XRF screening and laboratory results for April 24 showed surface soils were generally "clean," with only a few sporadic areas with lead concentrations above the remediation cleanup goal of 320 parts per million (ppm) lead.

On April 25, 2013, SCS was onsite with two XRF analyzers and an excavator and operator provided by Boberg Engineering & Contracting, Inc. An initial excavation near the southern property line identified a layer of debris with apparent burn ash, between the "clean" surface soils and native soils (at about street elevation), that contained concentrations of lead up to several thousand ppm or more. To determine the extent of this debris and ash layer, nineteen test pits were subsequently excavated across the Property to determine if buried debris was present, thickness of the debris layer, and relative thickness of the cover soil. Excavation of the test pits determined that the debris/ash layer occurs across the Property ranging in thickness from approximately 2 feet near the southeast corner to approximately 10.5 feet near the northwest corner of the Property. Figure 2 (enclosed) provides an isopach map showing the approximate location and thickness of the debris/ash layer with elevated lead concentrations on the Property, based on observations and XRF screening from the 19 test pits. Our calculations show that this debris/ash layer totals approximately 40,000 cubic yards of material, or approximately 60,000 tons.

In order to further characterize the nature of the impacted soil for evaluation of disposal options (i.e., non-hazardous, California hazardous, or RCRA hazardous), the debris and impacted soil from the initial excavation and 19 test pits was segregated and loaded into a truck and transported to a location at the northwest portion of the Property for stockpiling. Two composite samples were collected from this stockpile (one from the north end [SP-North Comp] and one from the south end [SP-South Comp]). These stockpile samples were collected by grabbing discrete sub-samples from numerous locations and placing them into a baggie to be well mixed and then placed into a jar for submittal to the laboratory for analysis of CCR Title 22 metals, total petroleum hydrocarbons (TPH), and volatile organic compounds. Based on the initial lab results, additional analyses were conducted for soluble lead concentrations using two methods – the California Waste Extraction Test (WET, for comparison to the Soluble Threshold Limit Concentration [STLC]) and the federal Toxicity Characteristic Leaching Procedure (TCLP), and soluble zinc concentrations using the WET method. The results of these analyses are provided in the enclosed Chemtek report dated April 29, 2013. To summarize, the results of these analyses showed:

- No detectable concentrations of volatile organic compounds;
- TPH concentrations up to 28.3 and 156 milligrams per kilogram (mg/kg, equal to ppm) in the diesel and heavy range, respectively;
- Total lead concentrations of 1,210 and 1,110 mg/kg;
- Soluble lead concentrations using the WET method of 76.5 and 65.2 milligrams per liter (mg/l), above the STLC of 5 mg/l;
- Soluble lead concentrations using the TCLP method of 1.41 and 1.48 mg/l, below the limit of 5 mg/l; and
- A soluble zinc concentration of 130 mg/l, below its STLC of 250 mg/l.

These results show that there is a layer of debris and ash buried throughout most of the Property, totaling approximately 40,000 cubic yards, that would be classified as a California hazardous waste for the purposes of disposal. The stockpiled soil containing debris and ash was placed on and has been covered with Visqueen plastic until further notice.

Please call either of the undersigned at (562) 426-9544 if you have any questions.

Regards,

October 6, 2014

Project No. 01210161.10

Via Email (carmen.piro@longbeach.gov)

Mrs. Carmen Piro-Swart
The City of Long Beach
Department of Health & Human Services (DHHS)
2525 Grand Ave, Room 222
Long Beach, California 90815
(562) 570-4137

Subject: Submittal of proposed CAP detail and Schedule, Former Long Beach Public Service Yard, APNs 7271-007-005 and 7271-012-023, Long Beach, California

Dear Mrs. Piro-Swart:

SCS Engineers (SCS) is pleased to submit this letter to detail the conversation on Friday, October 3, 2014 between yourself and Nelsen Kerr of the DHHS and Kevin Green and Ashley Hutchens of SCS. As discussed, the remediation of the Former Long Beach Public Service Yard (LBPSY, the "Property") per the *Revised Remedial Action Plan* (RAP; SCS, Revised May 2014, approved by the DHHS in a June 6, 2014 letter), is near completion. However, it has been determined that lead-contaminated soil and refuse does extend beneath the historical building located at 1475 San Francisco Avenue that will be moved by the City of Long Beach (City). Upon removal of that building, additional excavation will be required to clean up San Francisco Yard, LLC's property (the Yard Parcel) and relocate the impacted material to the City's Area of Contamination (AOC; the Long Beach Parcel) prior to placement of the final cap.

Additionally, impacted material will remain below the surface (and unexposed) in several areas of the Property including: beneath the building that will stay on the Yard Parcel Property; in an area where a Southern California Edison pole and support are; and in sidewalk areas of the Property boundary. Refuse and lead-impacted soil have been removed to the extent practical and confirmation sampling of the excavation bottom indicates lead concentrations well below the cleanup goal. This information will be summarized in the closure report prepared upon completion of the remediation/cap installation.

PROPOSED CAP

The final cap of the AOC area is proposed to consist of three layers as follows: (1) a 6 oz/yd filter fabric layer placed over the lead-impacted soil of the AOC followed by (2) an 18-inch thick layer of clean soil (capable of being compacted to produce a suitable low conductivity layer) and encapsulated with (3) a Hydro Mulch®/Super Tack® mixture. Fact sheets providing details of the proposed cap layers are enclosed.

PROPOSED SCHEDULE

As discussed in the approved RAP, the AOC area will be repurchased by the City (responsible party for environmental impacts) from San Francisco Yard, LLC. The remediation and cap are being conducted by subcontractors retained by San Francisco Yard, LLC prior to the City's repurchase of the land. The final cap (consisting of 3 layers, as proposed above) cannot be installed until all impacted material that is to be removed from the Yard Parcel is placed onto the AOC (Long Beach Parcel), therefore, the final cap cannot be completed until the City has moved the historical building and the material beneath it can be excavated and placed on the AOC. The City indicates that the schedule for relocation of the structure is approximately 8 weeks away.

In the interim, as discussed during our call, we propose to place the filter fabric (layer 1) over the AOC to prevent dust and erosion. When the material from beneath the historical building is removed, the filter fabric can be rolled up to allow for placement on the AOC. After which, the filter fabric will be replaced over the impacted soil and layers 2 and 3 of the final cap can be placed. At this time, based on the proposed 8 week schedule to relocate the historical building, it is anticipated that the final cap will be complete in December 2014. The remedial action closure report will be prepared for submittal to DHHS after placement of the final cap.

The San Francisco Yard, LLC parcel is currently being backfilled with clean soil and continued improvements including final grading and asphalt pavement. The current tenant to the south (Petros Tubular Services) has leased the Property for future use to expand their storage yard. Until the time that the final cap can be placed (along with a permanent fence to separate the parcels), a temporary construction fence will be installed around the AOC (Long Beach Parcel) and signs placed on the fence "Caution Lead Hazard Do Not Enter Work Area Unless Authorized." An example of the proposed sign is enclosed.

Please call either of the undersigned at (562) 426-9544 if you have any questions.

Sincerely

Ashley P. Hutchens, REPA

RG60N Nonwoven Filter Fabric Technical Data Sheet

Reed & Graham's RG60N is a nonwoven geotextile composed of polypropylene fibers, which are formed into a stable network such that the fibers retain their relative position. RG60N is inert to biological degradation and resists naturally encountered chemicals, alkalis, and acids. RG60N meets AASHTO M288-06 Class 2 for elongation >50%.

Mechanical Properties	Test Method	Unit	Minimum Average Roll Value
Grab Tensile Strength	ASTM D 4632	kN (lbs)	0.71(160)
Grab Tensile Elongation	ASTM D 4632	%	50
Trapezoid Tear Strength	ASTM D 4533	kN (lbs)	0.267(60)
CBR Puncture Strength ¹	ASTM D 6241	kN(lbs)	1.82 (410)
Apparent Opening Size (AOS) ²	ASTM D 4751	mm (U.S. Sieve)	0.212 (70)
Permittivity	ASTM D 4491	Sec ⁻¹	1.5
Flow Rate	ASTM D 4491	l/min/m ²	4480
		gal/min/ft ²	110
UV Resistance after 500 hours	ASTM D 4355	% Strength Retained	70

¹ ASTM D 6241 replaces ASTM D 4833.

² ASTM D 4751, AOS is a Maximum Opening Diameter Value

PLEASE NOTE: Mullen Burst Strength ASTM D 3786 is not recognized by ASTM D-35 on Geosynthetics as an acceptable Geosynthetic test methods. Puncture Strength ASTM D 4833 is not recognized by AASHTO M288 and has been replaced with CBR Puncture ASTM D 6241

Soil Stabilization

SUPER TACK®

DISPERSIBLE GUAR BASED TACKIFIER

Super Tack® has a proven track record as one of the best organic tackifiers on the market. **Super Tack®** excels in a wide variety of applications such as hydraulic mulching, straw or hay mulching, aerial post fire rehabilitation and temporary soil stabilization.

- **Super Tack®** has been successfully used on 6,000+ acres of post fire rehabilitation.
- **Super Tack®** is a complex formulation of high quality water soluble polysaccharide and other proprietary ingredients.
- **Super Tack®** is 93% soluble and quickly disperses and dissolves for even distribution of the binder with no lumps.
- **Super Tack®** is designed for optimal viscosity build up for uniform application. Once applied, the superior tack performance gives the mulch mixture sufficient strength and resistance to raindrop impact.

ENVIRONMENTALLY FRIENDLY: **Super Tack®** is made from natural non-toxic ingredients that will not harm soil, equipment or other living things.

UNIVERSITY TESTED: **Super Tack®** tested 84% effective for soil erosion at San Diego State University.

Super Tack® available in a variety of packaging and sizes:

- 5 lb & 10 lb baggies packaged in 40 lb cases.
- 50 lb (22.68 kg) weather proof multi-ply plastic bags
- 20 lb plastic buckets

Super Tack® Manufactured by **RANTEC CORPORATION** – providing technical assistance in tackifier use. Call us for more information.

SUPER TACK®

UNIVERSITY TESTED SAN DIEGO STATE UNIVERSITY SOIL EROSION RESEARCH LABORATORY

- 84% REDUCTION IN SEDIMENT YIELD
- 40% DECREASE IN RUNOFF

When compared to the untreated bare soil condition on a 2:1 slope, the data demonstrates that an application of a hydraulic mixture composed of 2,000 lbs of wood fiber mulch, 4,000 gallons of water and 120 lbs of Rantec **Super Tack**® reduced erosion and sediment delivery by an average of 84% when exposed to three 10-year storm replications. The same test documented a decrease in runoff volume of 40%.

SDSU, September 26, 2003

RECOMMENDED SPECIFIC LANGUAGE: A non toxic, biodegradable tackifier such as **Super Tack**® shall be used on this project at the minimum application rates shown on the table below. Such tackifiers shall be a natural galactomannan based hydrocolloid treated with dispersant agents for easy field mixing. **Super Tack**® can be applied at 15 to 25 pounds in 1,000 gallons of water depending on the equipment capacity. When used as an overspray for straw, use **Super Tack**® more concentrated at a rate of 40 lbs in 1,000 gallons per acre with the use of 150 to 300 lbs of mulch as a marker.

2. Composition / Information on Ingredients

Ingredient	CAS Number	% Weight	Exposure Limits
Guar Gum	9000-30-0	90-100	5 mg/m ³ (respirable) PEL-TWA 3 mg/m ³ (respirable) TLV-TWA 10 mg/m ³ (inhalable dust) TLV-TWA

OSHA Hazardous Material: Yes

3. Hazards Identification

Emergency Overview:

This product is a natural product. High concentrations of dust suspended in the air presents a fire and explosion hazard. Excessive inhalation of dust may cause respiratory irritation and possible lung injury with symptoms of shortness of breath and reduced lung function.

Acute Health Effects:

Eye Contact: Contact may cause irritation based on studies with laboratory animals.

Skin Contact: Contact may cause dryness.

Inhalation: Inhalation of dust may cause irritation of the nose, throat and respiratory passages. Symptoms include coughing, sore throat, nasal congestion, sneezing wheezing and shortness of breath. May cause allergic reaction in susceptible individuals.

Ingestion: DO NOT INGEST. While this product is not toxic by ingestion, swallowing small amounts could cause complete blockage of the mouth, pharynx, trachea, esophagus and/or gastrointestinal system which may cause choking, suffocation and/or other life threatening medical conditions. Get medical attention immediately.

Chronic Health Effects: Prolonged overexposure to any nuisance dust may cause lung injury. Symptoms include cough, shortness of breath and reduced pulmonary function

Carcinogenicity: None of the components of this product are listed as carcinogens or suspected carcinogens by OSHA, IARC or NTP.

Medical Conditions Aggravated by Exposure: Persons with pre-existing skin and respiratory disorders may be at an increased risk from exposure.

MATERIAL SAFETY DATA SHEET

Reviewed: 11 June 2003

4. First Aid Measures

Eye: Flush immediately with large amounts of water. Eyelids should be held away from the eyeball to ensure thorough rinsing. If irritation persists get medical attention.

Skin: No first aid should normally needed. Wash exposed skin with soap and water after use. If irritation or rash develops get medical attention. Use skin lotion if dryness occurs.

Inhalation: If symptoms of irritation or allergy develop, remove person from source of exposure to fresh air. If symptoms persist get medical attention.

Ingestion: Swallowing even small amounts may have serious, life-threatening effects. Get immediate medical attention.

5. Firefighting Measures

Flashpoint: Not Applicable

Autoignition Temperature: Not Determined

Lower Explosion Limit: 0.04 oz/cf

Upper Explosion Limit: Not determined

Extinguishing Media: Use water fog, dry chemical, carbon dioxide or foam. Do not use streams of water as dust dispersed by water streams can explode.

Special Fire Fighting Procedures: Wear positive pressure, self-contained breathing apparatus and full protective clothing.

Unusual Fire and Explosion Hazards: Powder has the potential to form explosive mixtures with air. Avoid creating dust. Keep away from heat, sparks and open flames.

Combustion Products: Oxides of carbon and nitrogen.

6: Accidental Release Measures

Wear appropriate protective clothing and equipment. Sweep up or vacuum, avoiding the creation of airborne dust, and collect into a suitable container for disposal. Keep spilled product away from flammable and combustible materials. Wash residual traces with hot water after clean-up is complete. Caution: guar gum is very slippery when wet.

7. Handling and Storage

Handling: Avoid generating and breathing dust. Avoid eye contact. Use with adequate local exhaust ventilation and dust collection to maintain the concentration of airborne dust below the exposure limits. If clothing becomes contaminated, remove and launder before re-use. Wash thoroughly after handling.

Storage: Keep product dry. Store in a cool, dry area. Keep containers closed to avoid moisture absorption.

8. Exposure Controls / Personal Protection

Engineering Controls: Use explosion proof local exhaust ventilation as needed to maintain exposure concentrations below the recommended limits.

Personal Protective Equipment (PPE)

Eye Protection: Safety glasses or goggles recommended.

Skin Protection: Rubber, plastic or leather gloves recommended.

Respiratory Protection: If the concentrations exceed the Threshold Value Limit (TLV), a NIOSH approved dust respirator, supplied air respirator or self-contained breathing apparatus is recommended. Select appropriate

respiratory protection for respirable particulates based on consideration of the airborne workplace concentrations and duration of exposure. Select and use respirators in accordance with 29 CFR 1910.134, ANSI Z88.2, the NIOSH Respirator Decision Logic and good industrial hygiene practice.

<http://www.access.gpo.gov/nara/cfr/cfr-retrieve.html#page1>, ANSI Z88.2 <http://www.ansi.org/>, the NIOSH Respirator Decision Logic and good industrial hygiene practice <http://www.cdc.gov/niosh/homepage.html>.

9. Physical and Chemical Properties

Boiling Point: Not Applicable

Melting Point: Decomposes

Vapor Pressure: Not Applicable

Vapor Density (Air=1): Not Applicable

% Solubility in Water: Complete

Odor/Appearance: Yellow powder with a bean-like odor.

Specific Gravity: Not applicable

% Volatile: Not applicable

Evaporation Rate (Butyl Acetate=1): Not Applicable

pH: Not applicable

Octanol/Water Partition Coefficient: Not Applicable

10. Stability and Reactivity

Stability: Material is stable.

Incompatibility: Avoid high temperatures, sparks, open flames and moisture. Avoid contact with strong oxidizing agents.

Hazardous Reactions-Decomposition Products: Combustion may produce carbon dioxide, carbon monoxide and oxides of nitrogen.

Hazardous Polymerization: Will not occur.

11. Toxicological Information

Guar Gum: Oral rat LD50: 9.4g/kg

Guar gum is a natural food additive, although direct use in powder or pill form is banned by the FDA due to the risk of respiratory or gastrointestinal blockage.

12. Ecological Information

No ecotoxicity data is available at this time.

13. Disposal Considerations

Dispose in compliance with all applicable federal, state and local regulations. Do not dump down sewers or drains as this may cause blockage.

14. Transport Information

U.S. Department of Transportation (DOT)

Proper Shipping Name: Not Regulated

Hazard Class: N/A

UN/NA Code: N/A

DISCLAIMER

This Revised Remedial Action Plan (RAP) has been prepared for the San Francisco Yard, LLC with specific application to proposed remediation of metals in fill soils at two parcels within the former Long Beach Public Service Yard (LBPSY) in Long Beach, California. The revised RAP has been prepared in accordance with the care and skill generally exercised by reputable professionals, under similar circumstances, in this or similar localities. No other warranty, express or implied, is made as to the professional opinions presented herein. No other party, known or unknown to SCS Engineers, is intended as a beneficiary of this work product, its content or information embedded therein. Third parties use this report at their own risk.

Changes in property use and conditions may occur due to variations in rainfall, temperature, water usage, or other factors. Additional information which was not available to the consultant at the time of this investigation or changes which may occur on the property or in the surrounding area may result in modification to the property that would impact the summary presented herein. This RAP is not a legal opinion.

1.0 INTRODUCTION

SCS Engineers (SCS) has been retained by the San Francisco Yard, LLC (Yard) to prepare this revised Remedial Action Plan (RAP) for remediation of metals-impacted soil in fill material on a portion (APNs 7271-011-008 and 7271-008-013) of the Former Long Beach Public Service Yard (LBPSY; the “Property”). As discussed during the January 23, 2012 meeting between representatives of the City of Long Beach, City of Long Beach Department of Health & Human Services (DHHS), Yard, and SCS, an area of the former LBPSY was found to contain varying amounts of fill soil containing debris reportedly from the 1933 Long Beach earthquake. Previous investigations (discussed below) identified elevated concentrations of lead and other metals in certain areas of the fill.

A RAP was submitted to the DHHS, along with a Site Remediation Permit Application (a copy of the permit is provided in **Appendix A**) and appropriate permit fees, in March 2012 for approval of proposed remedial activities. In April 2013, remediation and grading activities were initiated however these activities were stopped when it was determined that a much higher volume of lead-impacted soil was present. Negotiations between Yard and the City of Long Beach have been underway to further evaluate remedial alternatives for the Property. At this time, the proposed remedial solution is to move the impacted soil from the southern and eastern portions of the Property and place them in a capped area on the northwesterly portion of the Property that the City of Long Beach will, in turn, purchase from Yard.

This revised RAP outlines the proposed new remedial option that creates two “operable units,” as follows:

- **Yard Parcel** – This parcel is currently owned by San Francisco Yard, LLC. This operable unit consists of an L-shaped, approximately 3.6 acre parcel, that includes the southern portion of the Property as well as a strip of land fronting San Francisco Avenue. Remediation of the Yard Parcel will meet cleanup goals, outlined below, towards the goal of receiving a no further action (NFA) letter from the DHHS.
- **Long Beach Parcel** – This operable unit consists of a rectangular-shaped parcel, approximately 1.7 acres in area, located in the northwestern corner of the Property. This operable unit will be used to stockpile the metals-impacted fill material, covered with an appropriate engineered cap, and be subject to a deed restriction as a condition of receiving a NFA letter. This parcel will be purchased from San Francisco Yard, LLC by the City of Long Beach.

The proposed remediation will be conducted in general accordance of the Department of Toxic Substances Control’s (DTSC) *Proven Technologies and Remedies (PT&R) Guidance, Remediation of Metals in Soils* dated August 29, 2008. One of the key provisions in this guidance relates to the Area of Contamination (AOC) approach, which “is based on an interpretation of federal regulations which allow for the movement of hazardous wastes within a contiguous area of generally dispersed contamination without being considered land disposal and without triggering land disposal restrictions or minimum technology requirements.”

1.1 BACKGROUND

The former LBPSY consists of approximately 12 acres on four and a half city blocks and was recently sold by the City of Long Beach. San Francisco Yard, LLC is the current property owner for the two parcels/city blocks are the subject of this revised RAP. A map showing the general location of the former LBPSY and surrounding area is provided as **Figure 1**.

The northern 4 acres of the former LBPSY (APNs 7271-012-020 and -023) have been leased to Baker Tanks for a storage yard. The southern 3 acres have been leased to Petros Pipe (APN 7271-007-005). Since very little fill soil exists on these parcels, and in order to expedite obtaining “no further action” letters for these parcels in anticipation of their eminent lease, a separate investigation under DHHS oversight was conducted. The results of this investigation, conducted under DHHS permit No. 1781, are provided in the SCS “*Confirmation Sampling Report*” dated March 2, 2012 submitted under separate cover. As discussed in the report, no evidence of significant impacts from lead or other metals associated with fill soil was identified and the DHHS issued NFA letters (**Appendix B**) for the northern and southern parcels (APNs 7271-007-005 and 7271-012-023) dated July 11, 2012.

1.1.1 Previous Investigations

An SCS Phase I Environmental Assessment report, dated February 22, 2005, found the following:

- Historical information identified four known underground storage tanks (USTs) historically located on the Property as follows: (1) a 1,000-gallon unused UST; (2) 550-gallon gasoline UST; and (3) two 12,000-gallon USTs (one diesel, one gasoline) as part of a former fueling station. The current known status of these USTs is as follows:
 - (1) A 1,000-gallon unused UST associated with 1725 San Francisco Avenue was located on the western portion of the 16th Street right-of-way (north of APN 7271-012-023; **Figure 2**). This UST was originally meant to contain solvent/kerosene, was installed on July 19, 1988, and removed in January 1999. Regulatory closure was received from the Joint Powers Agency (currently the DHHS) in the “No Further Action” Letter dated March 25, 1999. Please note that this UST is not on or near the portion of the LBPSY that is the focus of this RAP.
 - (2) A 550-gallon gasoline UST associated with 901 West Anaheim Street was located in the 14th Street right-of-way (south of APN 7271-008-013). A “UST Unauthorized Release (Leak)/Contamination Site Report” dated May 29, 1996 indicated that on August 30, 1995 it was discovered that an unknown quantity of gasoline leaked from a 30 plus year old UST at 901 West Anaheim Street. This UST was removed by Maness Environmental on August 30, 1995.

SCS installed three groundwater wells in July 2005 and conducted six rounds of groundwater monitoring, after which the Regional Water Quality Control Board (RWQCB) issued a case closure letter on July 6, 2011 (**Appendix B**). The groundwater wells were abandoned on July 22, 2011 completing the requirements

for this UST case. This former UST area is in the 14th Street right-of-way, outside of the anticipated fill area.

- (3) Two 12,000-gallon USTs associated with 1725 San Francisco Avenue were located at the northeast corner of APN 7271-008-013 at 1445 San Francisco Avenue. Long Beach DHHS files revealed an Underground Storage Tank Removal Report, dated August 7, 2008 for the removal of two 12,000-gallon USTs (one gasoline and one diesel). The tanks, installed November 1998 were removed on July 2, 2008. The USTs were reportedly in good condition upon removal, however, approximately two feet of groundwater filled into the UST excavation upon removal and free product diesel was observed floating on the groundwater in the southwest corner of the excavation. The fuel reportedly leaked into the pea-gravel backfill surrounding the USTs during the excavation of one of the dispenser pans. Mitigation methods included using absorbent pads to skim the free product and a vacuum truck to remove approximately 5,000 gallons of groundwater. Analysis of soil samples collected from beneath each end of the USTs (at 16 feet below ground surface [bgs]) and beneath each dispenser (at 6 feet bgs) indicated that no detectable concentrations of total petroleum hydrocarbons (TPH) or volatile organic compounds (VOCs) were present.

As a result of the impact to groundwater observed during removal, the DHHS referred the case to the RWQCB in an email dated October 10, 2008. In the email, the DHHS asked the RWQCB if a “no further action” letter should be issued. The RWQCB issued closure of the case (T0603701971) in a NFA letter dated July 3, 2012 (**Appendix B**).

- City personnel indicated that fill material was placed on the western raised portions of the Property; the exact date of deposition and the source of this material is unknown, but reportedly may include debris from the 1933 earthquake.

A Phase II investigation (SCS, August 2, 2005) was conducted to investigate environmental concerns identified during the 2005 Phase I Assessment, in particular, the known and suspected fill materials. The investigation included 12 soil borings and 10 soil gas sampling locations in the anticipated fill area as shown on **Figure 2**. **Table 1** provides a summary of soil gas data for the 10 soil gas points placed within the existing fill and proposed excavation area. One sample (SG12) had a low concentration (2.6 micrograms per liter) of 1,1,1-trichloroethane. **Tables 2 and 3** provide results of the soil data for 12 soil borings placed within the anticipated fill area. Samples were selectively analyzed for TPH, VOCs, organochlorine pesticides, and/or metals, the results of which are as follows:

- One low detection (104 milligrams per kilogram [mg/kg, equivalent to parts per million [ppm]]) of heavy range TPH (C₂₃-C₄₀) was detected in sample B12-5’.
- One sample (B8-5’) contained low concentrations of 1,1,1-trichloroethane and dibromochloromethane at 4.9 and 4.3 micrograms per kilogram, respectively. These concentrations are well below the applicable Regional Screening Levels (RSLs) and

California Human Health Screening Levels (CHHSLs) do not exist for these compounds in soil.

- Lead was detected in 4 of 9 samples above the commercial CHHSL of 320 mg/kg. In addition, several other metals (zinc, copper, arsenic, etc.) were elevated in these 4 samples.
- No organochlorine pesticides were detected.

Fill materials were encountered in borings in the elevated areas of the Property. There were no indications in the laboratory results from soil samples of elevated concentrations of VOCs, hydrocarbons, or organochlorine pesticides. However, lead and arsenic were detected in fill soils at concentrations that may be a potential risk to human health (up to 2,400 and 110 mg/kg, respectively), or require special consideration (i.e., additional testing and characterization) prior to removal and/or disposal. The area of anticipated fill debris is depicted on **Figure 2**. The previous SCS Phase I and Phase II Investigations were appended to the March 2012 RAP.

As part of a pre-remediation/construction activity, 22 test trenches were excavated on January 16, 2011 by Boberg Engineering to observe the materials that would be encountered, the depths of the material, and moisture content. A layer of soil, ranging 2 to 4 feet exists above the debris layer. The debris layer was observed to consist of brick, broken glass, broken concrete, metal, burnt wood, asphalt, etc., in a matrix of soil.

1.1.2 Initiation of Site Development and Additional Investigation

In January 2013, clarifiers associated with former car wash (located within the fill area) and paint rinse areas were removed. Clarifier abandonment activities were conducted with oversight provided by Long Beach Fire Department and described in SCS's report, *Clarifier Removal Report, Former Long Beach Public Service Yard* dated February 2013. Approval of the clarifier closure is pending and is to be included with site closure.

As previously discussed, in April 2013, remediation and grading activities were initiated. Upon completion of clearing and grubbing the Property, SCS conducted two days of field activities (April 24 and 25, 2013), to assess the extent of lead-impacted soils onsite. A draft letter report summarizing these site characterization activities dated May 9, 2013 is provided in **Appendix C**.

As outlined in the enclosed report, on April 24, 2013, SCS used an X-Ray fluorescence (XRF) analyzer to screen surface soils in the field for lead concentrations. Nine soil samples were also collected for analysis at a fixed laboratory to confirm and compare the results with the XRF screening data. Analytical results showed good correlation between the XRF as a screening tool and laboratory analytical results. The XRF screening and laboratory results for April 24 showed surface soils were generally "clean," with only a few sporadic areas with lead concentrations above the remediation cleanup goal of 320 parts per million (ppm) lead.

On April 25, 2013, SCS was onsite with two XRF analyzers and an excavator and operator provided by Boberg Engineering & Contracting, Inc. An initial excavation near the southern property line identified a layer of debris with apparent burn ash, between the "clean" surface

soils and native soils (at about street elevation), that contained concentrations of lead up to several thousand ppm or more. To determine the extent of this debris and ash layer, nineteen test pits were subsequently excavated across the Property to determine if buried debris was present, thickness of the debris layer, and relative thickness of the cover soil. Excavation of the test pits determined that the debris/ash layer occurs across the Property ranging in thickness from approximately 2 feet near the southeast corner to approximately 10.5 feet near the northwest corner of the Property. Figure 2 of the draft letter (**Appendix C**) provides an isopach map showing the approximate location and thickness of the debris/ash layer with elevated lead concentrations on the Property, based on observations and XRF screening from the 19 test pits. Our calculations show that this debris/ash layer totals approximately 40,000 cubic yards of material, or approximately 60,000 tons.

In order to further characterize the nature of the impacted soil for evaluation of disposal options (i.e., non-hazardous, California hazardous, or RCRA hazardous), the debris and impacted soil from the initial excavation and 19 test pits was segregated and loaded into a truck and transported to a location at the northwest portion of the Property for stockpiling. Two composite samples were collected from this stockpile (one from the north end [SP-North Comp] and one from the south end [SP-South Comp]). These stockpile samples were collected by grabbing discrete sub-samples from numerous locations and placing them into a baggie to be well mixed and then placed into a jar for submittal to the laboratory for analysis of CCR Title 22 metals, TPH, and VOCs. Based on the initial lab results, additional analyses were conducted for soluble lead concentrations using two methods – the California Waste Extraction Test (WET, for comparison to the Soluble Threshold Limit Concentration [STLC]) and the federal Toxicity Characteristic Leaching Procedure (TCLP), and soluble zinc concentrations using the WET method. The results of these analyses are summarized as follows:

- No detectable concentrations of volatile organic compounds;
- TPH concentrations up to 28.3 and 156 mg/kg in the diesel and heavy range, respectively;
- Total lead concentrations of 1,210 and 1,110 mg/kg;
- Soluble lead concentrations using the WET method of 76.5 and 65.2 milligrams per liter (mg/l; equivalent to parts per million [ppm]), above the STLC of 5 mg/l;
- Soluble lead concentrations using the TCLP method of 1.41 and 1.48 mg/l, below the limit of 5 mg/l; and
- A soluble zinc concentration of 130 mg/l, below its STLC of 250 mg/l.

These results show that there is a layer of debris and ash buried throughout most of the Property totaling approximately 40,000 cubic yards that would be classified as a California hazardous waste for the purposes of disposal. The stockpiled soil containing debris and ash was placed on the Property and has been covered with Visqueen plastic until further notice.

2.0 GEOLOGIC AND HYDROGEOLOGIC CONDITIONS

2.1 PHYSIOGRAPHIC SETTING

According to the U.S. Geological Survey (USGS), Long Beach (1964, photorevised 1981), California 7.5 minute topographic map, the Property is located immediately east of the Los

Angeles River at an elevation of approximately five feet above mean sea level about 1.3 miles north of San Pedro Bay. Regional topography is relatively flat with a gentle slope to the west.

2.2 GEOLOGY AND SOILS

Geologic maps indicate that surface sediments in the area are Quaternary alluvium and coastal deposits of silt, sand, and gravel that are underlain by the late Pleistocene Lakewood Formation. The Lakewood Formation, which consists of gravel, sand, sandy silt, silt and clay with shale pebbles, extends to a depth of approximately 100 feet (California DWR, Bulletin No.104). Sediments below the Lakewood Formation belong to the late Pleistocene San Pedro Formation.

2.3 GROUNDWATER

The Property is located in the southern portion of the West Coast Groundwater Basin. The first groundwater aquifer in the region is within the Gage Aquifer within the Lakewood Formation. Based on groundwater monitoring reports for a former UST site located in the 14th Street right-of-way on the north boundary of the Property, first groundwater is approximately 4 to 5 feet below grade and flows southeasterly in direction. Shallow groundwater has locally been impacted by saltwater intrusion; therefore, it is not used as a drinking water source. Groundwater beneath the Property may be tidally influenced due to tides in the adjacent Los Angeles River.

3.0 CLEANUP GOALS

Cleanup goals, as discussed below and in the original RAP, will be in effect for only that portion of the Property to be retained by Yard. Cleanup goals will not be applicable to that portion of the Property with the stockpile of impacted soil to be purchased by the City of Long Beach.

3.1 METALS

The California EPA Office of Environmental Health Hazard Assessment (OEHHA) published the *Human-Exposure-Based Screening Numbers Developed to Aid Estimation of Cleanup Costs for Contaminated Soil*, dated November 2004, revised January 2005. This document describes CHHSLs for metals in soil for residential and industrial/commercial land use scenarios. The Property is proposed to be developed with commercial warehouse/manufacturing buildings or used as a storage yard; therefore the commercial CHHSLs would be applicable. With the exception of arsenic, the commercial CHHSLs for metals, shown in **Table 3**, will be used as the cleanup goals. Based on data collected from the site during the 2005 investigation (**Table 3**) and in April 2013, lead is likely to be the “driver” during remediation, that is, the primary chemical of potential concern (COPC). The proposed cleanup goal and commercial CHHSL for lead is 320 mg/kg.

With regard to arsenic, the US EPA has acknowledged that in some cases, the predictive risk-based models generate concentrations that lie within or even below the typical background. The DTSC has acknowledged that the strict use of the arsenic concentrations from risk-based models is impractical and has set acceptable levels in soil in the range of 8 to 12 mg/kg for school sites

in California. Further, in a presentation to the Society of Toxicology in March 2008, three scientists from DTSC presented a study to determine regional background concentrations of arsenic in soil in southern California. This study, derived from data collected from proposed school sites in five southern California counties, resulted in an upper-bound arsenic concentration of approximately 12 mg/kg. The authors concluded that this finding suggests that 12 mg/kg may be a useful screening number for evaluating arsenic as a COPC. Therefore, the proposed cleanup goal for arsenic is 12 mg/kg.

3.2 HYDROCARBONS

As discussed above, the purpose of the proposed remediation is to remove lead-impacted soil, however, during this process hydrocarbon-impacted soil may be encountered.

The RWQCB has established cleanup guidelines, also known as soil screening levels (SSLs), for hydrocarbon-impacted soils based on the potential for groundwater contamination (RWQCB, 1996). Where impacted soils are anticipated less than 20 feet above groundwater (groundwater is at approximately 4 to 5 feet bgs at the Property), the SSLs for petroleum hydrocarbons are:

- TPH-g or gasoline-range hydrocarbons (C₄-C₁₂) – 100 mg/kg
- TPH-d or diesel-range hydrocarbons (C₁₃-C₂₂) – 100 mg/kg
- Oil or heavy-range hydrocarbons (C₂₃-C₄₀) – 1,000 mg/kg

3.3 OTHER COPCS

If, during the course of excavation and remediation, other suspected COPCs are identified by SCS oversight personnel (for example, stained soils or odors are noted), soil samples will be collected and analyzed (for example, for VOCs, semi-volatile organics, etc.) to appropriately characterize the material. As necessary, additional cleanup goals will be developed for these COPCs and submitted to DHHS for approval.

4.0 REMEDIATION METHODS AND MATERIALS

4.1 PERMITTING AND SUBSURFACE UTILITIES CLEARANCE

As required by law, Underground Service Alert will be notified prior to conducting any subsurface work. In addition, a Site Remediation Permit has been obtained (**Appendix A**), and it is assumed that the permit will still be valid for the proposed remediation work.

The grading contractor will be responsible for obtaining grading and any other required permits from the City of Long Beach.

4.2 PROPOSED REMEDIAL APPROACH AND DESIGNATION OF AREA OF CONTAMINATION (AOC)

To avoid detrimental costs to the City of Long Beach for removal, transportation, and disposal/treatment of the large volume of lead-impacted soil at the Property, San Francisco Yard, LLC (current Property owner) and the City of Long Beach (responsible party for environmental impacts) have agreed to relocate the impacted material to the “Long Beach Parcel” as described above. The areas proposed to be retained by San Francisco Yard, LLC and the City of Long Beach are depicted on **Figure 3**. These areas of the site are hereinafter referred to as the “Yard Parcel” and “Long Beach Parcel.”

4.3 EXCAVATION AND SAMPLE COLLECTION FOR YARD PROPERTY

The existing asphalt paving was pulverized in-place and removed from the Property in spring of 2013. The concrete slabs, footings, and walls were also crushed to 2-inch minus material and are currently stockpiled on the Property. These materials will be used to stabilize any wet soils at the bottom of removal areas. Excavation and grading operations will be conducted by a qualified hazardous waste contractor with appropriate 40-hour health and safety training.

Prior to and during soil disturbance activities by the remediation contractor, SCS personnel will screen the fill soils using an X-Ray fluorescence (XRF) analyzer as discussed below. Initial activities will include removing clean topsoil above the lead-impacted soil and debris for the entire Property and stockpiling for re-use. The earthwork operations will consist of removing the existing fill material with self-loading push-pull scrapers or other appropriate equipment until the excavation areas become unstable due to wet soil conditions that exist on this site. At that point the equipment will be top loaded so as to minimize the effect that the rubber tired equipment will have on the wet soils. It is anticipated that at least two loaders will work in conjunction with the scraper operation to separate and remove any unsuitable materials, that is, oversized debris (e.g., concrete slabs) and contaminated soils. A tractor and disc may also be used to dry out the excavated wet soils.

The existing metals-impacted fill material on the Yard Parcel (**Figure 3**) will be excavated to native soils. This impacted fill material will be transported to the Long Beach Parcel and replaced and compacted to a height no greater than approximately 23 feet above mean sea level, which is the height of the adjacent river bike trail. Note that any surplus of confirmed “clean” soil on the Long Beach Parcel may be transported to and used on the Yard Parcel to maintain grades for drainage, etc.

As lead is the primary COPC, an XRF analyzer will be used as a field screening tool, supplemented with laboratory analysis of selected samples. As native soils are exposed below the fill, they will likely be moist to wet, which interferes with the XRF’s accuracy. Therefore, use of the XRF may be limited for screening and more reliance on laboratory testing results may be implemented. When native soils are reached on the Yard Parcel, confirmation soil samples will be collected and analyzed on a 24-hour turnaround at a state-certified laboratory in order to confirm field screening results and/or cleanup goals. Confirmation soil samples will also be

collected and analyzed from the clean and “dirty” stockpiles to verify XRF screening results and confirm the appropriate placement of soils on the Yard and Long Beach Parcels.

Confirmation samples will be collected in glass jars upon which a solvent-free label noting the date of collection, sample number, and project number will be affixed. Immediately following labeling, samples will be placed in a chilled cooler for transport and submittal to a California Department of Health Services-certified laboratory for analysis on a 24-hour rush analysis. All confirmation samples will be analyzed for total lead by EPA Method 6010B. Approximately 5 percent of the confirmation samples will be analyzed for all Title 22 metals by EPA Method 6010B/7000 series. Soil samples will be tracked from point of collection through the laboratory using standard chain-of-custody protocol.

If the concentration of lead (or any other identified COPC) exceeds the cleanup goal in any confirmation sample, additional excavation and sampling will be conducted. Excavation will continue on the Yard Parcel until COPC concentrations are below cleanup goals.

The native soils may be very wet and require special handling and/or stabilization prior to placing compacted clean fill soil over them. This work will require the use of track-mounted equipment, placement of stabilization fabric and a layer of either crushed concrete or imported gravel to stabilize the wet soils. Once the areas are stabilized, clean fill soil will be placed until the designed elevations are achieved.

4.4 CHARACTERIZATION OF STOCKPILES

Excavated “clean” cover soils from the Yard Parcel and the Long Beach Parcel will be stockpiled on plastic sheeting (Visqueen) to prevent mixing with underlying soils and/or asphalt, and covered with plastic sheeting at the end of the day. As discussed above, these stockpiles will be sampled to confirm they are viable for reuse upon completion of removal of impacted fill material.

It is anticipated that all other impacted fill material will be excavated and transferred to the 1.7-acre AOC to be retained by the City of Long Beach, as discussed below. However, if any impacted material is required to be removed from the Property (i.e. there isn’t enough space to pile it all on the 1.7-acre area) then surplus impacted material will be placed in stockpiles on plastic sheeting and covered at the end of the day. For these stockpiles, if any, composite samples will be collected and analyzed to characterize the soils for disposal in accordance with disposal facility and regulatory requirements.

A minimum of four samples will be collected from a stockpile of up to 1,000 cubic yards. For each additional 500 cubic yards of stockpile material, an additional sample will be collected and analyzed. All stockpile samples will be analyzed for Title 22 Metals (EPA 6010B/7000 series). In addition, as necessary for profiling and disposal facility purposes, stockpile samples will be analyzed for additional analytical parameters such as TPH (EPA Method 8015M) and VOCs (EPA Method 8260B).

Additionally, Title 22 of the California Code of Regulations (CCR) lists the concentrations of 17 heavy metals (and other contaminants as well), which, if present in soils or other solid wastes

above specified concentrations, would be considered hazardous for the purposes of disposal. The Title 22 regulations define both a total threshold limit concentration (TTLC), as well as a soluble threshold limit concentration (STLC), for each metal or contaminant. The TTLC limits are based on the total concentration of a contaminant within the solid soil sample. The STLC limits are based on a solvent extract of the soluble fraction of the contaminant from a solid soil sample. Soils with metals concentrations at or above the STLC or TTLC limits would be considered hazardous for the purposes of disposal.

It should be noted that based on the analytical methodology, the soluble fraction cannot exceed one-tenth the total concentration. As an example, if the total concentration of a contaminant were 50 mg/kg, the maximum possible soluble concentration of that contaminant in the same sample would be 5 mg/l. In practice, this is almost never the case, especially in soil samples, as a significant portion of the contaminant is invariably bound with the soil matrix.

It should also be noted that a total concentration in excess of ten times the STLC has no regulatory significance. It simply indicates the possibility that the soluble extract could contain a concentration above the STLC. The “ten times STLC” level will be used as a trigger to conduct further analysis (i.e., the soluble analysis) of a sample. The STLC for lead is 5 mg/kg, therefore any stockpile samples with lead concentration greater than 50 mg/kg (10 times the STLC) will be further characterized using the “wet” extraction method.

Based on analytical data, SCS will provide recommendations for reuse or disposal, as necessary. Samples will be analyzed on a 24-hour rush basis (if required), in order to characterize, profile, and obtain approval from various possible disposal/recycling facilities as quickly as possible in order to load and transport the soil stockpiles from the Property and prevent construction/grading delays.

5.0 CONCEPTUAL AOC DESIGN

The final cap design, with plans and specifications, will be provided to DHHS for approval following approval of the conceptual design outlined below.

5.1 CONSOLIDATING IMPACTED SOILS IN THE AOC

As indicated, the metals-impacted refuse material excavated from the Yard Parcel will be re-located and consolidated on the Long Beach Parcel, the designated AOC, that will be purchased and maintained by the City of Long Beach.

The lead-impacted fill material will be consolidated in the AOC by placing it in lifts and compacted to a degree appropriate for use of the area for a bike storage facility or other similar use. The placement of the material will be in a pile no higher than 23 feet above mean sea level (which is the approximate surveyed elevation of the adjacent river bike bath) with approximately 2:1 slopes. Large pieces of debris (i.e. light posts, large diameter concrete, footings, etc.) will be removed if not viable for compaction.

5.2 ASPHALT CAP DESCRIPTION

As previously discussed, it is anticipated that all impacted fill material from the Yard Parcel will be excavated and transferred to the 1.7-acre Long Beach Yard/AOC to be retained by the City of Long Beach (**Figure 3**). In turn, any surplus of confirmed “clean” soil on the Long Beach Parcel may be used on the Yard Parcel.

Once the impacted fill material is placed and compacted approximately 1 to 2 feet of clean cover soil will be placed over the impacted material and an asphalt cap and/or hydroseed or other capping device will be placed over the cover soil.

6.0 LONG TERM STEWARDSHIP

Specifications for the long term stewardship of the Long Beach Parcel and AOC will be provided in the final remedial design. In general, the long term stewardship will include the following:

6.1 INSTITUTIONAL CONTROLS

Upon completion of the remedial action and placement of the cap, institutional controls such as a deed restriction will be placed on the capped AOC parcel. The purpose of the deed restriction will be to restrict the use of the AOC where hazardous wastes will remain onsite and to stop or reduce the exposure of human and environmental receptors, and to ensure that the cap maintains its integrity and effectiveness.

6.2 OPERATION AND MAINTENANCE PLAN

As part of the cap remedial measure, a Long Term Operation and Maintenance Plan (LTOMP) will be prepared and submitted to DHHS for approval to ensure the integrity of the cap is not compromised and maintained in good condition so it remains protective of public health and the environment.

An agreement will be made between the City of Long Beach and DHHS specifying the requirements and providing financial assurance for future operation and maintenance of the cap. The LTOMP will likely consist of an annual inspection and letter to DHHS indicating that, based on the inspection, the cap is still in place and has not been disturbed or otherwise compromised.

The LTOMP will include a contingency plan that will be implemented if immediate corrective action is required to ensure protection of human health and the environment. In addition, the LTOMP will also include a five-year review plan.

7.0 POST-CLEANUP EVALUATION (RISK SCREENING)

Data collected during confirmation sampling of the Yard Parcel will be used to determine if further analysis of the data will be required for a post-cleanup evaluation. If all confirmation samples collected on the Yard Parcel, as discussed above, are below their respective cleanup goals (CHHSLs), no further evaluation will be necessary. If some exceedances remain in place

the data generated will be used to conduct a post-cleanup evaluation (as described in the PT&R guidance) to be included in the summary report. The evaluation will include minimum and maximum concentrations, mean concentration, the 95 percent Upper Confidence Level (UCL) on the mean, and the cleanup goal.

For the Long Beach Parcel/AOC, where the material will be capped in place, a risk evaluation is not required or necessary. When evaluating risk to human health, inhalation, dermal exposure and drinking water are three pathways commonly evaluated. The purpose of the cap is to eliminate the dermal and inhalation risk to human health. Groundwater in the area is not used for drinking water and previous analyses indicate the lead, based on TCLP analysis, is not a significant threat to groundwater.

8.0 HEALTH AND SAFETY

A site specific Health and Safety Plan, provided in **Appendix D**, will be in effect during the remediation work. Personnel involved in the mitigation activities will adhere to proper health and safety protocols as described therein. Field personnel will have certification of having completed a 40-hour Health and Safety course. Dust suppression and monitoring will be conducted to protect site personnel and the surrounding community.

An SCS representative will serve as Health and Safety Officer. This person will be responsible for monitoring potentially hazardous situations during mitigation activities and will ensure that all personnel know the potential physical and chemical hazards, and are trained in the proper use of personal protective equipment. It is anticipated that Level D will be the highest level of personal protective equipment necessary throughout the remedial action.

9.0 SCHEDULE AND REPORTING

A summary report of remediation and sampling activities including a discussion of field activities, methodology, figures, analytical results, QA/QC documentation, and conclusions and recommendations will be prepared and submitted approximately 4 to 6 weeks after completion of mitigation activities and receipt of supporting documentation (e.g., completed waste manifests). Field notes, analytical reports, manifests, and other supporting documentation will be appended as appropriate. The DHHS will be notified in advance of the dates and times of field activities.

SITE REMEDIATION PERMIT

CITY OF LONG BEACH
DEPARTMENT OF HEALTH AND HUMAN SERVICES
DIVISION OF HAZARDOUS MATERIALS
2525 Grand Avenue, Long Beach, CA 90815
PERMIT TO OPERATE

No.: 030812

Date: March 8, 2012

The Division of Hazardous Materials hereby authorizes the permittee named below to conduct REMEDIAL ACTION at the Former City of Long Beach Public Service Yard, **1725 San Francisco Avenue, Long Beach, California**

In conformity with existing ordinances regulating Environmental Health. *Permit expires 90 days from issuance date.*
THIS PERMIT IS NOT TRANSFERABLE, and may be suspended or revoked for just cause.

Permittee: **San Francisco Yard LLC**

Consultant: **SCS Engineers**
3900 Kilroy Airport Way, Suite 100
Long Beach, California 90806

Acting Health Officer: Mauro Torno, M.D.

DR. M. TORNIO, CITY HEALTH OFFICER

THIS PERMIT MUST BE POSTED IN A CONSPICUOUS PLACE AT THE ABOVE SITE ADDRESS

**Underground Storage Tanks Program – Case Closure
Former Long Beach City Tow Yard
901 Anaheim Street West, Long Beach (Case No. 908130498) (Priority D-1 Site)**

Dear Mr. Neely:

This letter confirms the completion of a site investigation and corrective action for the underground storage tank(s) formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tank(s) are greatly appreciated.

Based on information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground tank(s) site is in compliance with the requirements of subdivision (a) and (b) of Section 25296.10 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.3 of the Health and Safety Code and that no further action related to the petroleum release(s) at the site is required.

This notice is issued pursuant to subdivision (g) of Section 25296.10 of the Health and Safety Code.

If you have groundwater monitoring wells at the subject site, you must comply with the following:

1. All wells must be properly located and abandoned.
2. Well abandonment permits and all other necessary permits must be obtained from the appropriate agencies prior to the start of work.
3. You must submit a report on the abandonment of the wells to this office by **October 30, 2011**. This report must include, at a minimum, a site map, a description of the well abandonment process, and copies of all signed permits.

**UNDERGROUND STORAGE TANKS PROGRAM – CASE CLOSURE
PUBLIC SERVICE YARD (PRIORITY D-1 SITE)
1725 SAN FRANCISCO AVENUE, SITE 43, LONG BEACH (FILE NO. 908130607)**

Dear Ms. Piro:

This letter confirms the completion of a site investigation and corrective action for the underground storage tanks formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tanks are greatly appreciated.

Based on information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground tank(s) site is in compliance with the requirements of subdivision (a) and (b) of Section 25296.10 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.3 of the Health and Safety Code and that no further action related to the petroleum release(s) at the site is required.

This notice is issued pursuant to subdivision (g) of Section 25296.10 of the Health and Safety Code.

Claims for reimbursement of corrective action costs submitted to the Underground Storage Tank Cleanup Fund more than 365 days after the date of this letter or issuance or activation of the Fund's Letter of Commitment, whichever occurs later, will not be reimbursed unless one of the following exceptions applies:

- Claims are submitted pursuant to Section 25299.57, subdivision (k) (reopened UST case); or
- Submission within the timeframe was beyond the claimant's reasonable control, ongoing work is required for closure that will result in the submission of claims beyond that time period, or that under the circumstances of the case, it would be unreasonable or inequitable to impose the 365-day time period.

Ms. Carmen Piro

APPENDIX C

DRAFT SUMMARY OF SITE CHARACTERIZATION ACTIVITIES LETTER (SCS, MAY 9, 2013)

SCS ENGINEERS

May 9, 2013
Project No. 01212361.00

Via email (Richard.Anthony@longbeach.gov)

Mr. Richard Anthony
The City of Long Beach
333 W. Ocean Blvd
Long Beach, CA 90802
(562) 570-5282

**Subject: Summary of Site Characterization Activities and Analytical Data
Former Long Beach Public Service Yard
1725 San Francisco Avenue, Long Beach, California (the "Property")**

Dear Mr. Anthony:

SCS Engineers is providing this letter to describe site characterization activities recently conducted at the Former Long Beach Public Service Yard as a part of the proposed redevelopment of the Property by Alere Property Group LLC. Upon completion of clearing and grubbing the Property, SCS conducted two days of field activities (April 24 and 25, 2013), to assess the extent of lead-impacted soils onsite. On April 24, 2013, SCS used an X-Ray fluorescence (XRF) analyzer to screen surface soils in the field for lead concentrations. Nine soil samples were also collected for analysis at a fixed laboratory (Chemtek Environmental Laboratories, Inc.) to confirm and compare the results with the XRF screening data. Analytical results showed good correlation between the XRF as a screening tool and laboratory analytical results (enclosed Chemtek report dated April 25, 2013). The XRF screening and laboratory results for April 24 showed surface soils were generally "clean," with only a few sporadic areas with lead concentrations above the remediation cleanup goal of 320 parts per million (ppm) lead.

On April 25, 2013, SCS was onsite with two XRF analyzers and an excavator and operator provided by Boberg Engineering & Contracting, Inc. An initial excavation near the southern property line identified a layer of debris with apparent burn ash, between the "clean" surface soils and native soils (at about street elevation), that contained concentrations of lead up to several thousand ppm or more. To determine the extent of this debris and ash layer, nineteen test pits were subsequently excavated across the Property to determine if buried debris was present, thickness of the debris layer, and relative thickness of the cover soil. Excavation of the test pits determined that the debris/ash layer occurs across the Property ranging in thickness from approximately 2 feet near the southeast corner to approximately 10.5 feet near the northwest corner of the Property. Figure 2 (enclosed) provides an isopach map showing the approximate location and thickness of the debris/ash layer with elevated lead concentrations on the Property, based on observations and XRF screening from the 19 test pits. Our calculations show that this debris/ash layer totals approximately 40,000 cubic yards of material, or approximately 60,000 tons.

In order to further characterize the nature of the impacted soil for evaluation of disposal options (i.e., non-hazardous, California hazardous, or RCRA hazardous), the debris and impacted soil from the initial excavation and 19 test pits was segregated and loaded into a truck and transported to a location at the northwest portion of the Property for stockpiling. Two composite samples were collected from this stockpile (one from the north end [SP-North Comp] and one from the south end [SP-South Comp]). These stockpile samples were collected by grabbing discrete sub-samples from numerous locations and placing them into a baggie to be well mixed and then placed into a jar for submittal to the laboratory for analysis of CCR Title 22 metals, total petroleum hydrocarbons (TPH), and volatile organic compounds. Based on the initial lab results, additional analyses were conducted for soluble lead concentrations using two methods – the California Waste Extraction Test (WET, for comparison to the Soluble Threshold Limit Concentration [STLC]) and the federal Toxicity Characteristic Leaching Procedure (TCLP), and soluble zinc concentrations using the WET method. The results of these analyses are provided in the enclosed Chemtek report dated April 29, 2013. To summarize, the results of these analyses showed:

- No detectable concentrations of volatile organic compounds;
- TPH concentrations up to 28.3 and 156 milligrams per kilogram (mg/kg, equal to ppm) in the diesel and heavy range, respectively;
- Total lead concentrations of 1,210 and 1,110 mg/kg;
- Soluble lead concentrations using the WET method of 76.5 and 65.2 milligrams per liter (mg/l), above the STLC of 5 mg/l;
- Soluble lead concentrations using the TCLP method of 1.41 and 1.48 mg/l, below the limit of 5 mg/l; and
- A soluble zinc concentration of 130 mg/l, below its STLC of 250 mg/l.

These results show that there is a layer of debris and ash buried throughout most of the Property, totaling approximately 40,000 cubic yards, that would be classified as a California hazardous waste for the purposes of disposal. The stockpiled soil containing debris and ash was placed on and has been covered with Visqueen plastic until further notice.

Please call either of the undersigned at (562) 426-9544 if you have any questions.

Regards,

DISCLAIMER

This Site Remediation and Closure Report has been prepared for San Francisco Yard, LLC with specific application to the remediation of lead-impacted fill soil at two parcels within the Former Long Beach Public Service Yard in Long Beach, California. This report has been prepared in accordance with the care and skill generally exercised by reputable professionals, under similar circumstances, in this or similar localities. No other warranty, express or implied, is made as to the professional opinions presented herein. No other party, known or unknown to SCS Engineers, is intended as a beneficiary of this work product, its content or information embedded therein. Third parties use this report at their own risk.

EXECUTIVE SUMMARY

SCS Engineers (SCS) provided oversight during remediation of metals-impacted soil in fill material on a portion of the Former Long Beach Public Service yard (LBPSY; the “Property”). The remediation was conducted in accordance with the *Revised Remedial Action Plan (RAP) for the Former Long Beach Public Service Yard, Long Beach, California* (SCS, March 2012, Revised May 2014), approved by the City of Long Beach Department of Health & Human Services (DHHS) in a letter dated June 6, 2014.

The following summarizes the information justifying the request for a “no further action” with regards to metals in soil on the “Yard Parcel,” a portion of the former LBPSY:

- The remediation was conducted in accordance with SCS’s *Revised Remedial Action Plan (RAP) for the Former Long Beach Public Service Yard, Long Beach, California* (SCS, March 2012, Revised May 2014) approved by and with oversight by the DHHS, the jurisdiction with authority over the site closure.
- Refuse and lead-impacted soil have been remediated to the extent practical on the Yard parcel. Approximately 44,000 cubic yards of impacted material was excavated from the Yard Parcel and placed in the AOC on the Long Beach Parcel. Impacted material that remains – in the sidewall at western Property boundary, at the SCE power pole and support wire, and potentially below the existing building as shown in **Figure 4** – is encapsulated and unexposed.
- A total of 78 confirmation samples collected from the excavation area bottom confirm that all sample concentrations (ranging from less than 2.5 to 102 mg/kg of lead) are well below the remediation goal of 320 mg/kg, the California Human Health Screening Level for commercial land use.
- The City of Long Beach is retaining responsibility for completing the final cap of the AOC. The Long Beach Parcel will be discussed in a subsequent report upon completion of cap, which will include a plan for the long term stewardship of the AOC to be maintained by the City.

In summary, remediation activities have been conducted to remove lead-impacted soil and associated debris from the Yard Parcel. For the reasons stated above, a “no further action” letter is respectfully requested for the Yard Parcel.

1.0 INTRODUCTION

SCS Engineers (SCS) was retained by the San Francisco Yard LLC to provide oversight during remediation of metals-impacted (primarily lead) soil in fill material on a portion of the Former Long Beach Public Service yard (LBPSY; the “Property”). The remediation was conducted in accordance with the *Revised Remedial Action Plan (RAP) for the Former Long Beach Public Service Yard, Long Beach, California* (SCS, March 2012, Revised May 2014), approved by the City of Long Beach Department of Health & Human Services (DHHS) in a letter dated June 6, 2014. In addition, remediation was conducted under a Permit to Operate (permit no: 030812) issued by the City of Long Beach on March 8, 2012 (**Appendix A**).

1.1 BACKGROUND

The Former LBPSY consisted of approximately 12 acres on four and a half city blocks and was sold by the City of Long Beach (the “City”) to San Francisco Yard LLC (the “SFY”). A map showing the general location of the Former LBPSY and surrounding area is provided as **Figure 1**.

The northern 4 acres of the former LBPSY (APNs 7271-012-020 and -023) have been leased to Baker Tanks for a storage yard. The southern 3 acres have been leased to Petros Pipe (APN 7271-007-005). Since very little fill soil existed on these parcels, and in order to expedite obtaining “no further action” letters for these parcels in anticipation of their eminent lease, a separate investigation was conducted with DHHS oversight in February 2012. The results of this investigation, conducted under DHHS permit No. 1781, are summarized in the SCS “*Confirmation Sampling Report*” dated March 2, 2012. As concluded in the report, no evidence of significant impacts from lead or other metals associated with fill soil was identified and the DHHS issued no further action (NFA) letters (**Appendix B**) for the northern and southern parcels (APNs 7271-007-005 and 7271-012-023) dated July 11, 2012.

The remaining portion of the Former LBPSY (APNs 7271-011-008 and 7271-008-013) was found to contain varying amounts of fill soil containing debris (reportedly from the 1933 Long Beach earthquake). Previous investigations (discussed below) identified elevated concentrations of lead and other metals in certain areas of the fill and was therefore subject to remedial action as described herein. The “Yard Parcel” will be leased to Petros Pipe for expansion of their operations in the near future. The Long Beach Parcel recipient of the lead soil will remain unused and may be closed under separate NFA.

1.1.1 Previous Investigations

An SCS Phase I Environmental Assessment report, dated February 22, 2005, found the following:

- Historical information identified four known underground storage tanks (USTs) historically located on the Former LBPSY site as follows: (1) a 1,000-gallon unused UST; (2) 550-gallon gasoline UST; and (3) two 12,000-gallon USTs (one diesel, one gasoline) as part of a former fueling station. The current known status of these USTs is as follows:

- (1) A 1,000-gallon unused UST associated with 1725 San Francisco Avenue was located on the western portion of the 16th Street right-of-way (north of APN 7271-012-023). This UST was originally meant to contain solvent/kerosene, was installed on July 19, 1988, and removed in January 1999. Regulatory closure was received from the Joint Powers Agency (currently the DHHS) in the “No Further Action” Letter dated March 25, 1999. Please note that this UST is not on or near the portion of the Former LBPSY that is the focus of this remediation and report.
- (2) A 550-gallon gasoline UST associated with 901 West Anaheim Street was located in the 14th Street right-of-way (south of APN 7271-008-013). A “UST Unauthorized Release (Leak)/Contamination Site Report” dated May 29, 1996 indicated that on August 30, 1995 it was discovered that an unknown quantity of gasoline leaked from a 30 plus year old UST at 901 West Anaheim Street. This UST was removed by Maness Environmental on August 30, 1995.

SCS installed three groundwater wells in July 2005 and conducted six rounds of groundwater monitoring, after which the Regional Water Quality Control Board (RWQCB) issued a case closure letter on July 6, 2011 (**Appendix B**). The groundwater wells were abandoned on July 22, 2011 completing the requirements for this UST case. This former UST area is in the 14th Street right-of-way, outside of the anticipated fill area.

- (3) Two 12,000-gallon USTs associated with 1725 San Francisco Avenue were located at the northeast corner of APN 7271-008-013 at 1445 San Francisco Avenue. Long Beach DHHS files revealed an Underground Storage Tank Removal Report, dated August 7, 2008 for the removal of two 12,000-gallon USTs (one gasoline and one diesel). The tanks, installed November 1998 were removed on July 2, 2008. The USTs were reportedly in good condition upon removal, however, approximately two feet of groundwater filled into the UST excavation upon removal and free product diesel was observed floating on the groundwater in the southwest corner of the excavation. The fuel reportedly leaked into the pea-gravel backfill surrounding the USTs during the excavation of one of the dispenser pans. Mitigation methods included using absorbent pads to skim the free product and a vacuum truck to remove approximately 5,000 gallons of groundwater. Analysis of soil samples collected from beneath each end of the USTs (at 16 feet below ground surface [bgs]) and beneath each dispenser (at 6 feet bgs) indicated that no detectable concentrations of total petroleum hydrocarbons (TPH) or volatile organic compounds (VOCs) were present.

As a result of the impact to groundwater observed during removal, the DHHS referred the case to the RWQCB in an email dated October 10, 2008. In the email, the DHHS asked the RWQCB if a “no further action” letter should be issued. The RWQCB issued closure of the case (T0603701971) in an NFA letter dated July 3, 2012 (**Appendix B**).

- City personnel indicated that fill material was placed on the western raised portions of the Property; the exact date of deposition and the source of this material is unknown, but reportedly may include debris from the 1933 earthquake.

A Phase II investigation (SCS, August 2, 2005) was conducted to investigate environmental concerns identified during the 2005 Phase I Assessment, in particular, the known and suspected fill materials. The investigation included 12 soil borings and 10 soil gas sampling locations in the anticipated fill area as shown on **Figure 2**. Of the samples analyzed, the results were as follows:

- One soil gas sample (SG12) had a low concentration (2.6 micrograms per liter) of 1,1,1-trichloroethane.
- One low detection (104 milligrams per kilogram [mg/kg, equivalent to parts per million [ppm]]) of heavy range TPH (C₂₃-C₄₀) was detected in soil sample B12-5'.
- One soil sample (B8-5') contained low concentrations of 1,1,1-trichloroethane and dibromochloromethane at 4.9 and 4.3 micrograms per kilogram (µg/kg), respectively. These concentrations are well below the applicable Regional Screening Levels (RSLs) and California Human Health Screening Levels (CHHSLs) do not exist for these compounds in soil.
- Lead was detected in 4 of 9 samples above the commercial CHHSL of 320 mg/kg. In addition, several other metals (zinc, copper, arsenic, etc.) were elevated in these 4 samples.
- No organochlorine pesticides were detected.

Fill materials were encountered in borings in the elevated areas of the Property. There were no indications in the laboratory results from soil samples of elevated concentrations of VOCs, TPH, or organochlorine pesticides. However, lead and arsenic were detected in fill soils at concentrations that may be a potential risk to human health (up to 2,400 and 110 mg/kg, respectively), or require special consideration (i.e., additional testing and characterization) prior to removal and/or disposal. Based on this investigation, the area of anticipated fill debris was depicted on **Figure 2**. The previous SCS Phase I and Phase II Investigations were appended to the March 2012 RAP.

As part of a pre-remediation/construction activity, 22 test trenches were excavated on January 16, 2011 by Boberg Engineering to observe the materials that would be encountered, the depths of the material, and moisture content. A layer of soil, ranging 2 to 4 feet exists above the debris layer. The debris layer was observed to consist of brick, broken glass, broken concrete, metal, burnt wood, asphalt, etc., in a matrix of soil.

1.1.2 Initiation of Site Development and Additional Investigation

In January 2013, clarifiers associated with former car wash (located within the fill area) and paint rinse areas were removed. Clarifier abandonment activities were conducted with oversight provided by Long Beach Fire Department and described in SCS's report, *Clarifier Removal Report, Former Long Beach Public Service Yard* dated February 2013. Approval of the clarifier closure is pending and is to be included with site closure.

In April 2013, remediation and grading activities were initiated. Upon completion of clearing and grubbing the Property, SCS conducted two days of field activities (April 24 and 25, 2013) to

assess the extent of lead-impacted soils onsite. A draft letter report summarizing these site characterization activities (SCS, May 9, 2013; appended to the Revised May 2014 RAP) summarized the following:

- On April 24, 2013, SCS used an X-Ray fluorescence (XRF) analyzer to screen surface soils in the field for lead concentrations. Nine soil samples were also collected for analysis at a fixed laboratory to confirm and compare the results with the XRF screening data. Analytical results showed good correlation between the XRF as a screening tool and laboratory analytical results. The XRF screening and laboratory results for April 24 showed surface soils were generally “clean,” with only a few sporadic areas with lead concentrations above the remediation cleanup goal of 320 mg/kg lead.
- On April 25, 2013, SCS was onsite with two XRF analyzers and an excavator and operator provided by Boberg Engineering & Contracting, Inc. An initial excavation near the southern property line identified a layer of debris with apparent burn ash, between the “clean” surface soils and native soils (at about street elevation), that contained concentrations of lead up to several thousand mg/kg or more.
- To determine the extent of this debris and ash layer, nineteen test pits were subsequently excavated across the Property to determine if buried debris was present, thickness of the debris layer, and relative thickness of the cover soil. Excavation of the test pits determined that the debris/ash layer occurs across the Property ranging in thickness from approximately two feet near the southeast corner to approximately 10.5 feet near the northwest corner of the Property. **Figure 2** provides an isopach map showing the approximate location and thickness of the debris/ash layer with elevated lead concentrations on the Property, based on observations and XRF screening from the 19 test pits.
- Calculations showed that this debris/ash layer totaled approximately 40,000 cubic yards of material, or approximately 60,000 tons.

In order to further characterize the nature of the impacted soil for evaluation of disposal options (i.e., non-hazardous, California hazardous, or RCRA hazardous), the debris and impacted soil from the initial excavation and 19 test pits was segregated and loaded into a truck and transported to a location at the northwest portion of the Property for stockpiling. Two composite samples were collected from this stockpile (one from the north end [SP-North Comp] and one from the south end [SP-South Comp]). These stockpile samples were collected by grabbing discrete sub-samples from numerous locations and placing them into a baggie to be well mixed and then placed into a jar for submittal to the laboratory for analysis of CCR Title 22 metals, TPH, and VOCs. Based on the initial lab results, additional analyses were conducted for soluble lead concentrations using two methods – the California Waste Extraction Test (WET, for comparison to the Soluble Threshold Limit Concentration [STLC]) and the federal Toxicity Characteristic Leaching Procedure (TCLP), and soluble zinc concentrations using the WET method. The results of these analyses are summarized as follows:

- No detectable concentrations of VOCs;
- TPH concentrations up to 28.3 and 156 mg/kg in the diesel and heavy range, respectively;
- Total lead concentrations of 1,210 and 1,110 mg/kg;

- Soluble lead concentrations using the WET method of 76.5 and 65.2 milligrams per liter (mg/l; equivalent to parts per million [ppm]), above the STLC of 5 mg/l;
- Soluble lead concentrations using the TCLP method of 1.41 and 1.48 mg/l, below the limit of 5 mg/l; and
- A soluble zinc concentration of 130 mg/l, below its STLC of 250 mg/l.

These results showed there was a layer of debris and ash buried throughout most of the Property totaling approximately 40,000 cubic yards that would be classified as a California hazardous waste for the purposes of disposal and is the subject of this report. The stockpiled soil containing debris and ash was placed on the Long Beach Parcel and covered with Visqueen plastic as part of the Area of Contamination (AOC) further described below.

1.2 OBJECTIVES

As described above, in April 2013, remediation and grading activities were initiated at the Property, however, these activities were stopped when it was determined that a much higher volume of lead-impacted soil was present. Negotiations between SFY and the City commenced to further evaluate remedial alternatives for the Property. The remedial solution proposed and approved in the RAP was to move the impacted soil from the southern and eastern portions of the Property and place them in a capped area on the northwesterly portion of the Property that the City would, in turn, purchase from SFY creating two “operable units,” as follows:

- **Yard Parcel** – This operable unit, owned by Yard, is an L-shaped, approximately 3.5 acre parcel that includes the southern portion of the Property as well as a strip of land fronting San Francisco Avenue. Remediation of the Yard Parcel was proposed to meet cleanup goals, with a goal of receiving an NFA letter from the DHHS.
- **Long Beach Parcel** – This operable unit was is a rectangular-shaped parcel, approximately 1.8 acres in area, located in the northwestern corner of the Property. This operable unit was used to stockpile the metals-impacted fill material, will be covered with an appropriate cap, and will be subject to a deed restriction as a condition of receiving an NFA letter. This parcel will be purchased from SFY by the City.

The parcel designations and ownership are depicted on **Figure 3**. In addition, the County of Los Angeles Grant of Certificate of Compliance along with surveys of the parcels are provided in **Appendix C**. Per the RAP, the remediation was conducted in general accordance of the Department of Toxic Substances Control’s (DTSC) *Proven Technologies and Remedies (PT&R) Guidance, Remediation of Metals in Soils* dated August 29, 2008. One of the key provisions in this guidance relates to the AOC approach, which “is based on an interpretation of federal regulations which allow for the movement of hazardous wastes within a contiguous area of generally dispersed contamination without being considered land disposal and without triggering land disposal restrictions or minimum technology requirements.”

Innovative Construction Solutions, Inc. (ICS) was contracted directly by SFY to conduct excavation activities of impacted material, transfer material to the AOC, and compact and cap the AOC. SCS worked directly with ICS during remediation activities.

The focus of this report is to describe remediation activities of the Yard Parcel to move towards an NFA status for Yard to lease the Property to Petros Pipe. The Long Beach Parcel will be discussed in a subsequent report upon completion of capping.

2.0 GEOLOGIC AND HYDROGEOLOGIC CONDITIONS

2.1 PHYSIOGRAPHIC SETTING

According to the U.S. Geological Survey (USGS), Long Beach (1964, photorevised 1981), California 7.5 minute topographic map, the Property is located immediately east of the Los Angeles River at an elevation of approximately five feet above mean sea level about 1.3 miles north of San Pedro Bay. Regional topography is relatively flat with a gentle slope to the west.

2.2 GEOLOGY AND SOILS

Geologic maps indicate that surface sediments in the area are Quaternary alluvium and coastal deposits of silt, sand, and gravel that are underlain by the late Pleistocene Lakewood Formation. The Lakewood Formation, which consists of gravel, sand, sandy silt, silt and clay with shale pebbles, extends to a depth of approximately 100 feet (California DWR, Bulletin No.104). Sediments below the Lakewood Formation belong to the late Pleistocene San Pedro Formation.

2.3 GROUNDWATER

The Property is located in the southern portion of the West Coast Groundwater Basin. The first groundwater aquifer in the region is within the Gage Aquifer within the Lakewood Formation. Based on groundwater monitoring reports for a former UST site located in the 14th Street right-of-way on the north boundary of the Property, first groundwater is approximately 4 to 5 feet below grade and flows southeasterly in direction. Shallow groundwater has locally been impacted by saltwater intrusion; therefore, it is not used as a drinking water source. Groundwater beneath the Property may be tidally influenced due to tides in the adjacent Los Angeles River.

3.0 CLEANUP GOALS

Cleanup goals were in effect for only that portion of the Property to be retained by Yard. Cleanup goals are not applicable to that portion of the Property with the stockpile of impacted soil to be purchased by the City. During remedial excavation oversight, TPH and other chemicals of potential concern (COPC) were not encountered. Therefore metals were the only COPCs requiring evaluation.

3.1 METALS

The California EPA Office of Environmental Health Hazard Assessment (OEHHA) published the *Human-Exposure-Based Screening Numbers Developed to Aid Estimation of Cleanup Costs for Contaminated Soil*, dated November 2004, revised January 2005. This document describes CHHSLs for metals in soil for residential and industrial/commercial land use scenarios. The Property is planned for use as a storage yard with a commercial structure with potential for

redevelopment with commercial warehouse/manufacturing buildings in the future; therefore the commercial CHHSLs would be applicable.

Based on previous data collected from the Property and observations during remediation, it was determined that lead was the primary COPC and therefore the “driver” for remediation. The cleanup goal and commercial CHHSL for lead is 320 mg/kg.

4.0 REMEDIAL SOIL EXCAVATION

4.1 SUBSURFACE UTILITIES CLEARANCE AND PERMIT

As required by law, Underground Service Alert was notified by ICS prior to conducting the subsurface activities (Dig Alert No. A42311233). In addition, all work was conducted under the Permit to Operate (permit no: 030812 provided in **Appendix A**) issued by the DHHS on March 8, 2012. Although the permit indicates expiration *90 days from issuance date*, Ms. Carmen Piro-Swart indicated the permit remained valid for excavation activities conducted in 2014-2015.

4.2 EXCAVATION OF LEAD-IMPACTED AREA

Under the direction of SCS, remedial excavation was initiated by ICS on August 27, 2014. An attempt was made to scrape “clean dirt” for reuse from the surface prior to reaching the lead-impacted soil for removal and placement in the AOC. However, it was determined that a very limited volume of soil was able to be preserved for reuse because the clean layer was uneven and had been mixed by potholing events and other activities on the Property.

The bulk of excavation activities were conducted between August 27 and October 3, 2014. Excavation was initiated at the southwest corner of the Property and was conducted in rows (east-west in direction) approximately 30 feet wide. The excavated material was primarily soil with high lead concentrations mixed with inert debris (glass, bottles, metal, wire, etc.). Photos of excavation activities are provided in **Appendix D**. **Figure 3** depicts the area of excavation. As shown on the figure, the southeast corner was not excavated, as previous exploratory activities (pothole trenching and XRF screening) indicated no refuse or elevated lead in this area. Excavation was conducted to the east in this area until the limits of refuse and lead-impacted soil was reached.

An XRF was used to screen soil as it was removed for placement at the AOC. In addition, visual observation of impacted material versus native “clean” bottom was easily discernable and used to terminate the depth of excavation. Native soils were then screened using an XRF to verify excavation limits prior to collection of confirmation samples as discussed below. XRF readings of impacted material typically ranged from several hundred to several thousand mg/kg of lead and clean native material was typically less than 50 mg/kg.

During excavation activities, it was determined that lead-contaminated soil and refuse extended beneath the historical “Train Depot” building located at 1475 San Francisco Avenue that was scheduled to be relocated by the City of Long Beach. Therefore when excavation was complete, to the extent practical, activities were put on hold until the historical building was relocated by the City in February 2015. Once the structure was relocated, excavation of the area beneath it was conducted between February 12 and 19, 2015.

An estimated total of approximately 44,000 cubic yards of impacted material was excavated from the Yard Parcel and transported to the AOC on the Long Beach Parcel. As discussed in SCS' letter dated October 6, 2014, impacted material will remain below the surface (and unexposed) in several areas of the Property including: beneath the building that will stay on the Yard Parcel; in an area where a Southern California Edison pole and support are; and in sidewall areas of the west Property boundary. Refuse and lead-impacted soil have been remediated to the extent practical and confirmation samples collected as discussed below.

4.3 COLLECTION OF CONFIRMATION SAMPLES

As previously mentioned, during excavation activities, an XRF analyzer was used as a field screening tool to guide the excavation and determine when confirmation samples should be collected for laboratory analysis. Field screening of the excavation bottom, indicated lead concentrations were well below the cleanup goal of 320 mg/kg (mostly non-detect to less than 50 mg/kg).

Confirmation samples were collected in an approximate 50-foot grid across the excavation area, as depicted on **Figure 3**. All confirmation soil samples were collected in 4-ounce glass jars. Immediately after sample collection, the glass jars were sealed and a solvent-free label noting date and time of collection, sample number, and project number was affixed to each sample. Samples were then placed in a chilled cooler for transport to Advanced Environmental Testing Laboratories, Inc. (AETL) of Burbank, California for analysis of lead and/or Title 22 Metals by EPA Method 6010B/7000. AETL is a California Department of Health Services certified laboratory. All samples were tracked from point of collection through the laboratory using standard chain-of-custody protocol. New Nitrile gloves were used and frequently replaced in the handling of all soil samples.

4.3.1 Analytical Results for Confirmation Soil Samples

Table 1 provides a summary of all confirmation samples collected for laboratory analysis from excavation area bottom. A total of 78 confirmation samples (S1 through S78) were collected on a grid spacing of approximately every 50 feet (**Figure 3**). Concentrations of lead in the 78 samples ranged from non-detect (less than 2.5 mg/kg) to 102 mg/kg. All concentrations detected were well below the cleanup goal of 320 mg/kg.

In addition, five percent of the samples (a total of four samples) were analyzed for all Title 22 Metals as shown on **Table 1**. Concentrations of other metals were below their respective CHHSLs and/or within background ranges typical of California soils and acceptable to regulatory agencies. The AETL laboratory reports for confirmation samples are provided in **Appendix E**.

4.4 PLACEMENT OF AREA OF CONTAMINATION (AOC)

Excavated material was directly loaded into end dumps and transferred to the Long Beach Parcel for placement in the AOC. The purpose of the designation of the AOC was to avoid detrimental costs to the City of Long Beach for removal, transportation, and disposal/treatment of the large volume of lead-impacted soil at the Property. The AOC was capped with a six ounce per yard filter fabric (layer one of the three layer cap) as proposed in the SCS letter dated October 6, 2014

proposing the cap detail. The filter fabric was placed after the main excavation was completed in early November 2014. During the additional excavation beneath the historical building, the fabric was folded back to allow for placement of the remaining soils and then replaced and sandbagged until the remaining two layers of the cap (proposed 18-inch soil lawyer and hydro mulch/super tack layer) are placed (anticipated in the near future).

The City is taking responsibility for finalizing the cap. Upon completion of the cap, a separate report may be prepared and submitted to the DHHS detailing the Long Beach Parcel and the long term stewardship of the AOC. The report will also discuss analytical results of six samples (DSP1 through DSP6) collected from material placed in the AOC.

At this time, a fence (with privacy screen), has been placed around the AOC at the boundary of the Long Beach and Yard parcels to prevent access to the AOC. In addition, signs have been posted on the fence stating: “*Caution Lead Hazard Do Not Enter Work Area Unless Authorized.*” Photos of the fence and signage are provided in **Appendix D**.

4.5 BACKFILL OF EXCAVATION AREA

Soil was imported from two construction sites for backfill of the remedial excavation area. Approximately 7,406 cubic yards of soil was imported from the northeast corner of Ocean Boulevard and Broadway Court in Long Beach and approximately 5,208 cubic yards was imported from a University of Southern California site located 30th and Hoover Streets in Los Angeles. The material was placed in lifts, compacted, and compaction testing was conducted.

Neither of the import sites had any suspected contamination. Nevertheless, six composite samples (F-1 through F-6) were collected of the Long Beach import soil and three composite samples (F-7 through F-9) were collected of the USC import soil as the material was trucked onsite. In addition, the USC soil was prescreened prior to import onto the site. Samples were analyzed at AETL for VOCs (EPA Method 8260B), TPH (EPA Method 8015M), and metals (EPA method 6010B/7000). Data shows that the material is clean import fill. The AETL laboratory reports are provided in **Appendix F**.

5.0 SUMMARY AND CONCLUSIONS

SCS has conducted remedial excavation activities at the Former Long Beach Public Service Yard (APNs 7271-011-008 and 7271-008-013) in accordance with the *Revised Remedial Action Plan (RAP) for the Former Long Beach Public Service Yard, Long Beach, California* (SCS, March 2012, Revised May 2014). The remedial excavation was conducted in order to remove soil impacted with lead and containing varying amounts debris (reportedly from the 1933 Long Beach earthquake).

Because of the high lead concentrations in the large volume of soil on the Property, the remedial solution proposed and approved was to move the impacted soil from the southern and eastern portions of the Property and place them in a capped area on the northwestern portion of the Property, the Long Beach Parcel. Per the RAP, the remediation was conducted in general accordance of the Department of Toxic Substances Control’s (DTSC) *Proven Technologies and Remedies (PT&R) Guidance, Remediation of Metals in Soils* dated August 29, 2008. This approach allowed the City to avoid detrimental costs for removal, transportation, and disposal/treatment of the large volume of lead-impacted soil, which the City by indemnity,

remained responsible for upon sale of the Property to the SFY. In turn, this approach created two “operable units”: 1) The Yard Parcel which has been remediated to the cleanup goals, and on which SFY has a leasing agreement; 2) The Long Beach Parcel which now houses the AOC and which will be purchased from the SFY by the City. The City is retaining responsibility for completing the final cap of the AOC. The Long Beach Parcel may be discussed in a subsequent report upon completion of cap.

Remedial excavation activities were conducted between August 27 through October 3, 2014 and February 12 through 19, 2015 (once the historical building at 1475 San Francisco was relocated by the City). A total of 78 confirmation samples (S1 through S78) were collected on a grid spacing of approximately every 50 feet (**Figure 3**). Concentrations of lead in the 78 samples ranged from non-detect (less than 2.5 mg/kg) to 102 mg/kg, all well below the cleanup goal of 320 mg/kg. In addition, five percent of the samples (a total of four samples) were analyzed for all Title 22 Metals (**Table 1**), of which all were below their respective CHHSLs and/or within background ranges typical of California soils and acceptable to regulatory agencies.

In total, approximately 44,000 cubic yards of impacted material was excavated from the Yard Parcel and placed in the AOC on the Long Beach Parcel. Because debris extended beyond the Property boundaries, the impacted material was excavated to the extent possible without extending past the Property boundaries (i.e. into the river path). Therefore, impacted material will remain below the surface (and unexposed) in several other areas of the Property including: potentially beneath the building that remains on the Yard Parcel Property, and in an area where the Southern California Edison pole and support are located.

Approximately 12,614 cubic yards of clean soil was imported from two construction sites for backfill of the remedial excavation area on the Yard Parcel. The excavation was backfilled, graded, and compacted prior to being asphalt paved for future parking or storage by Petros Pipe.

6.0 BASIS FOR SITE CLOSURE

Based on the information outlined above, the following summarizes the information justifying the request for a “no further action” with regards to metals in soil on the Yard Parcel:

- The remediation was conducted in accordance with SCS’s *Revised Remedial Action Plan (RAP) for the Former Long Beach Public Service Yard, Long Beach, California* (SCS, March 2012, Revised May 2014) approved by and with oversight by of the City of Long Beach Department of Health & Human Services.
- Refuse and lead-impacted soil have been remediated to clean up goals on the Yard Parcel. Approximately 44,000 cubic yards of impacted material was excavated from the Yard Parcel and place in the AOC on the Long Beach parcel. Impacted material that remains – in the sidewall at western Property boundary, at the SCE power pole and support wire, and potentially below the existing building as shown in **Figure 4** – is encapsulated and unexposed.
- A total of 78 confirmation samples collected from the excavation area bottom confirm that all sample concentrations (ranging from less than 2.5 to 102 mg/kg of lead) are well

below the remediation goal of 320 mg/kg, the California Human Health Screening Level for commercial land use.

- The City of Long Beach is retaining responsibility for completing the final cap of the AOC. The Long Beach Parcel may be discussed in a subsequent report upon completion of cap, which will include a plan for the long term stewardship of the AOC to be maintained by the City.

In summary, remediation activities have been conducted to remove lead-impacted soil and associated debris from the Yard Parcel. A “no further action” letter is respectfully requested for the Yard Parcel.

**Underground Storage Tanks Program – Case Closure
Former Long Beach City Tow Yard
901 Anaheim Street West, Long Beach (Case No. 908130498) (Priority D-1 Site)**

Dear Mr. Neely:

This letter confirms the completion of a site investigation and corrective action for the underground storage tank(s) formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tank(s) are greatly appreciated.

Based on information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground tank(s) site is in compliance with the requirements of subdivision (a) and (b) of Section 25296.10 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.3 of the Health and Safety Code and that no further action related to the petroleum release(s) at the site is required.

This notice is issued pursuant to subdivision (g) of Section 25296.10 of the Health and Safety Code.

If you have groundwater monitoring wells at the subject site, you must comply with the following:

1. All wells must be properly located and abandoned.
2. Well abandonment permits and all other necessary permits must be obtained from the appropriate agencies prior to the start of work.
3. You must submit a report on the abandonment of the wells to this office by **October 30, 2011**. This report must include, at a minimum, a site map, a description of the well abandonment process, and copies of all signed permits.

**UNDERGROUND STORAGE TANKS PROGRAM – CASE CLOSURE
PUBLIC SERVICE YARD (PRIORITY D-1 SITE)
1725 SAN FRANCISCO AVENUE, SITE 43, LONG BEACH (FILE NO. 908130607)**

Dear Ms. Piro:

This letter confirms the completion of a site investigation and corrective action for the underground storage tanks formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tanks are greatly appreciated.

Based on information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground tank(s) site is in compliance with the requirements of subdivision (a) and (b) of Section 25296.10 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.3 of the Health and Safety Code and that no further action related to the petroleum release(s) at the site is required.

This notice is issued pursuant to subdivision (g) of Section 25296.10 of the Health and Safety Code.

Claims for reimbursement of corrective action costs submitted to the Underground Storage Tank Cleanup Fund more than 365 days after the date of this letter or issuance or activation of the Fund's Letter of Commitment, whichever occurs later, will not be reimbursed unless one of the following exceptions applies:

- Claims are submitted pursuant to Section 25299.57, subdivision (k) (reopened UST case); or
- Submission within the timeframe was beyond the claimant's reasonable control, ongoing work is required for closure that will result in the submission of claims beyond that time period, or that under the circumstances of the case, it would be unreasonable or inequitable to impose the 365-day time period.

(Parcel 7271-007-005/Southern Parcel)

Dear Mr. Neuhoff:

This letter confirms the completion of a site investigation related to the characterization of the soil at the former Long Beach City Public Service Yard, located at the above referenced location.

This letter specifically addresses the above referenced parcel and does not extend to other sections at the property.

Based on the Confirmation Sampling Report prepared by SCS Engineers, dated March 2, 2012, and with the provision that the information provided to this Agency was accurate and representative of site conditions, no further action is required.

Please note that this correspondence does not exempt you of any liability under the California Health and Safety Code or Water Code for past, present or future operations at the site address. Additionally, you maintain responsibility to correct any additional or previously unidentified conditions, which cause, or may thereafter cause, pollution or nuisance, or otherwise pose a threat to water quality or public health.

If you require additional information regarding this matter, you may contact Hazardous Materials Specialist, Carmen Piro at 562/570-4137

GRANT OF CERTIFICATE OF COMPLIANCE

The City of Long Beach has determined that the real property described below consists of contiguous parcels or units that have been or shall be developed with a project, which utilizes the contiguous parcels or units as one parcel or unit. Therefore, said parcels are deemed to be merged into one lot upon the recordation of this notice.

Application No.: 1411-08C
Property Owner: San Francisco Yard, LLC
Property Location: 1401 San Francisco Avenue
A.P.N.(s): 7271-008-013
Mailing Address: 100 Bayview Circle
Newport Beach, CA 92603

Said real property and the merger thereof of the existing parcels (as hereinafter described) as of the date of recordation of this document, has been determined to be in compliance with applicable provision of the Subdivision Map Act of the State of California (Section 66410 et seq. of the California Government Code) and the Subdivision Ordinance of the City of Long Beach, California, enacted pursuant thereto. The subject Certificate of Compliance is granted for the property described as follows:

THAT PORTION OF THE LAND DESCRIBED IN "GRANT DEED", IN THE CITY OF LONG BEACH, COUNTY OF LOS ANGELES, AS PER DOCUMENT RECORDED DECEMBER 29, 2010 AS INSTRUMENT NO. 20101933672, OF OFFICIAL RECORDS, IN THE OFFICE OF SAID COUNTY RECORDER; LYING NORTHERLY OF THE NORTHERLY LINE OF THE VACATED 14TH STREET (60.00 FEET WIDE) AND SOUTHERLY OF THE NORTHERLY LINE OF THE VACATED COWLES STREET (60.00 FEET WIDE).

TOGETHER WITH THE EASTERLY 110.00 FEET OF THE LAND DESCRIBED IN SAID "GRANT DEED" LYING NORTHERLY OF THE NORTHERLY LINE OF THE VACATED COWLES STREET (60.00 FEET WIDE), AND SOUTHERLY OF THE CENTERLINE OF THE VACATED 15TH STREET (60.00 FEET WIDE).

Legal descriptions of the parcels and a survey plot plan are attached hereto and by this reference made a part hereof.

SUBJECT TO: COVENANTS, CONDITIONS, RESTRICTIONS, RESERVATIONS, EASEMENTS AND RIGHTS-OF-WAY, IF ANY.

By: 
Jeff Winkler, Acting Planning Administrator
Department of Development Services

GRANT OF CERTIFICATE OF COMPLIANCE

The City of Long Beach has determined that the real property described below consists of contiguous parcels or units that have been or shall be developed with a project, which utilizes the contiguous parcels or units as one parcel or unit. Therefore, said parcels are deemed to be merged into one lot upon the recordation of this notice.

Application No.: 1411-08B
Property Owner: San Francisco Yard, LLC
Property Location: 1475 San Francisco Avenue
A.P.N.(s): 7271-011-008
Mailing Address: 100 Bayview Circle
Newport Beach, CA 92603

Said real property and the merger thereof of the existing parcels (as hereinafter described) as of the date of recordation of this document, has been determined to be in compliance with applicable provision of the Subdivision Map Act of the State of California (Section 66410 et seq. of the California Government Code) and the Subdivision Ordinance of the City of Long Beach, California, enacted pursuant thereto. The subject Certificate of Compliance is granted for the property described as follows:

THAT PORTION OF THE LAND DESCRIBED IN "GRANT DEED", IN THE CITY OF LONG BEACH, COUNTY OF LOS ANGELES, AS PER DOCUMENT RECORDED DECEMBER 29, 2010 AS INSTRUMENT NO. 20101933672, OF OFFICIAL RECORDS, IN THE OFFICE OF SAID COUNTY RECORDER; LYING NORTHERLY OF THE NORTHERLY LINE OF THE VACATED COWLES STREET (60.00 FEET WIDE) AND SOUTHERLY OF THE CENTERLINE OF THE VACATED 15TH STREET (60.00 FEET WIDE).

EXCEPTING THEREFROM THE EASTERLY 110.00 FEET THEREOF.

TOGETHER WITH THAT PORTION OF THE LAND DESCRIBED IN SAID "GRANT DEED" LYING BETWEEN THE CENTERLINE AND THE NORTHERLY LINE OF THE VACTED 15TH STREET (60.00 FEET WIDE).

EXCEPTING THEREFROM THE EASTERLY 30.00 FEET OF THE NORTHERLY 12.50 FEET THEREOF.

Legal descriptions of the parcels and a survey plot plan are attached hereto and by this reference made a part hereof.

SUBJECT TO: COVENANTS, CONDITIONS, RESTRICTIONS, RESERVATIONS, EASEMENTS AND RIGHTS-OF-WAY, IF ANY.

By: 
Jeff Winkler, Acting Planning Administrator
Department of Development Services

ACKNOWLEDGEMENT

A notary public or other officer completing this certificate verifies only the identity of the individual who signed the document to which this certificate is attached, and not the truthfulness, accuracy, or validity of that document.

[illegible]

On February 2, 2015, before me, Karen Jo McCracken, Notary Public, personally appeared Jeff Winklerpleck, who proved to me on the basis of satisfactory evidence to be the person(s) whose name(s) is/are subscribed to the within instrument and acknowledged to me that he/she/they executed the same in his/her/their authorized capacity(ies), and that by his/her/their signature(s) on the instrument the person(s), or the entity upon behalf of which the person(s) acted, executed the instrument.

I certify under PENALTY OF PERJURY under the laws of the State of California that the foregoing paragraph is true and correct.

WITNESS my hand and official seal.

Data Qualifiers and Descriptors

Data Qualifier:

#:	Recovery is not within acceptable control limits.
*:	In the QC section, sample results have been taken directly from the ICP reading. No preparation factor has been applied.
B:	Analyte was present in the Method Blank.
D:	Result is from a diluted analysis.
E:	Result is beyond calibration limits and is estimated.
H:	Analysis was performed over the allowed holding time due to circumstances which were beyond laboratory control.
J:	Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL).
M:	Matrix spike recovery is outside control limits due to matrix interference. Laboratory Control Sample recovery was acceptable.
MCL:	Maximum Contaminant Level
NS:	No Standard Available
S6:	Surrogate recovery is outside control limits due to matrix interference.
S8:	The analysis of the sample required a dilution such that the surrogate concentration was diluted below the method acceptance criteria.
X:	Results represent LCS and LCSD data.

Definition:

%Limit:	Percent acceptable limits.
%REC:	Percent recovery.
Con.L:	Acceptable Control Limits
Conce:	Added concentration to the sample.
LCS:	Laboratory Control Sample
MDL:	Method Detection Limit is a statistically derived number which is specific for each instrument, each method, and each compound. It indicates a distinctively detectable quantity with 99% probability.

American Environmental Testing Laboratory Inc.

2834 & 2908 North Naomi Street, Burbank, CA 91504 • DOHS NO: 1541, LACSD NO: 10181

Data Qualifiers and Descriptors

MS:	Matrix Spike
MS DU:	Matrix Spike Duplicate
ND:	Analyte was not detected in the sample at or above MDL.
PQL:	Practical Quantitation Limit or ML (Minimum Level as per RWQCB) is the minimum concentration that can be quantified with more than 99% confidence. Taking into account all aspects of the entire analytical instrumentation and practice.
Recov:	Recovered concentration in the sample.
RPD:	Relative Percent Difference

Data Qualifiers and Descriptors

Data Qualifier:

#:	Recovery is not within acceptable control limits.
*:	In the QC section, sample results have been taken directly from the ICP reading. No preparation factor has been applied.
B:	Analyte was present in the Method Blank.
D:	Result is from a diluted analysis.
E:	Result is beyond calibration limits and is estimated.
H:	Analysis was performed over the allowed holding time due to circumstances which were beyond laboratory control.
J:	Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL).
M:	Matrix spike recovery is outside control limits due to matrix interference. Laboratory Control Sample recovery was acceptable.
MCL:	Maximum Contaminant Level
NS:	No Standard Available
S6:	Surrogate recovery is outside control limits due to matrix interference.
S8:	The analysis of the sample required a dilution such that the surrogate concentration was diluted below the method acceptance criteria.
X:	Results represent LCS and LCSD data.

Definition:

%Limit:	Percent acceptable limits.
%REC:	Percent recovery.
Con.L:	Acceptable Control Limits
Conce:	Added concentration to the sample.
LCS:	Laboratory Control Sample
MDL:	Method Detection Limit is a statistically derived number which is specific for each instrument, each method, and each compound. It indicates a distinctively detectable quantity with 99% probability.

American Environmental Testing Laboratory Inc.

Data Qualifiers and Descriptors

MS:	Matrix Spike
MS DU:	Matrix Spike Duplicate
ND:	Analyte was not detected in the sample at or above MDL.
PQL:	Practical Quantitation Limit or ML (Minimum Level as per RWQCB) is the minimum concentration that can be quantified with more than 99% confidence. Taking into account all aspects of the entire analytical instrumentation and practice.
Recov:	Recovered concentration in the sample.
RPD:	Relative Percent Difference

CERTIFICATE OF ANALYSIS CASE NARRATIVE

AETL received 6 samples with the following specification on 09/08/2014.

Lab ID	Sample ID	Sample Date	Matrix	Quantity Of Containers
74297.01	DSP-04	09/05/2014	Soil	1
74297.02	S-11	09/08/2014	Soil	1
74297.03	S-12	09/08/2014	Soil	1
74297.04	S-13	09/08/2014	Soil	1
74297.05	S-14	09/08/2014	Soil	1
74297.06	S-15	09/08/2014	Soil	1

Method ^ Submethod	Req Date	Priority	TAT	Units
(6010B.LEAD)	09/09/2014	2	Rush	mg/Kg

The samples were analyzed as specified on the enclosed chain of custody.
No analytical non-conformances were encountered.

Data Qualifiers and Descriptors

Data Qualifier:

#:	Recovery is not within acceptable control limits.
*:	In the QC section, sample results have been taken directly from the ICP reading. No preparation factor has been applied.
B:	Analyte was present in the Method Blank.
D:	Result is from a diluted analysis.
E:	Result is beyond calibration limits and is estimated.
H:	Analysis was performed over the allowed holding time due to circumstances which were beyond laboratory control.
J:	Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL).
M:	Matrix spike recovery is outside control limits due to matrix interference. Laboratory Control Sample recovery was acceptable.
MCL:	Maximum Contaminant Level
NS:	No Standard Available
S6:	Surrogate recovery is outside control limits due to matrix interference.
S8:	The analysis of the sample required a dilution such that the surrogate concentration was diluted below the method acceptance criteria.
X:	Results represent LCS and LCSD data.

Definition:

%Limit:	Percent acceptable limits.
%REC:	Percent recovery.
Con.L:	Acceptable Control Limits
Conce:	Added concentration to the sample.
LCS:	Laboratory Control Sample
MDL:	Method Detection Limit is a statistically derived number which is specific for each instrument, each method, and each compound. It indicates a distinctively detectable quantity with 99% probability.

American Environmental Testing Laboratory Inc.

2834 & 2908 North Naomi Street, Burbank, CA 91504 • DOHS NO: 1541, LACSD NO: 10181

Data Qualifiers and Descriptors

MS:	Matrix Spike
MS DU:	Matrix Spike Duplicate
ND:	Analyte was not detected in the sample at or above MDL.
PQL:	Practical Quantitation Limit or ML (Minimum Level as per RWQCB) is the minimum concentration that can be quantified with more than 99% confidence. Taking into account all aspects of the entire analytical instrumentation and practice.
Recov:	Recovered concentration in the sample.
RPD:	Relative Percent Difference

Data Qualifiers and Descriptors

Data Qualifier:

#:	Recovery is not within acceptable control limits.
*:	In the QC section, sample results have been taken directly from the ICP reading. No preparation factor has been applied.
B:	Analyte was present in the Method Blank.
D:	Result is from a diluted analysis.
E:	Result is beyond calibration limits and is estimated.
H:	Analysis was performed over the allowed holding time due to circumstances which were beyond laboratory control.
J:	Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL).
M:	Matrix spike recovery is outside control limits due to matrix interference. Laboratory Control Sample recovery was acceptable.
MCL:	Maximum Contaminant Level
NS:	No Standard Available
S6:	Surrogate recovery is outside control limits due to matrix interference.
S8:	The analysis of the sample required a dilution such that the surrogate concentration was diluted below the method acceptance criteria.
X:	Results represent LCS and LCSD data.

Definition:

%Limit:	Percent acceptable limits.
%REC:	Percent recovery.
Con.L:	Acceptable Control Limits
Conce:	Added concentration to the sample.
LCS:	Laboratory Control Sample
MDL:	Method Detection Limit is a statistically derived number which is specific for each instrument, each method, and each compound. It indicates a distinctively detectable quantity with 99% probability.

American Environmental Testing Laboratory Inc.

Data Qualifiers and Descriptors

MS:	Matrix Spike
MS DU:	Matrix Spike Duplicate
ND:	Analyte was not detected in the sample at or above MDL.
PQL:	Practical Quantitation Limit or ML (Minimum Level as per RWQCB) is the minimum concentration that can be quantified with more than 99% confidence. Taking into account all aspects of the entire analytical instrumentation and practice.
Recov:	Recovered concentration in the sample.
RPD:	Relative Percent Difference

CERTIFICATE OF ANALYSIS CASE NARRATIVE

AETL received 6 samples with the following specification on 09/19/2014.

Lab ID	Sample ID	Sample Date	Matrix	Quantity Of Containers		
74466.01	S-30	09/18/2014	Soil	1		
74466.03	S-32	09/19/2014	Soil	1		
74466.04	S-33	09/19/2014	Soil	1		
74466.05	S-34	09/19/2014	Soil	1		
74466.06	S-35	09/19/2014	Soil	1		
	Method ^ Submethod		Req Date	Priority	TAT	Units
	(6010B.LEAD)		09/26/2014	2	Normal	mg/Kg
74466.02	S-31	09/19/2014	Soil	1		
	Method ^ Submethod		Req Date	Priority	TAT	Units
	(6010B/7000CAM)		09/26/2014	2	Normal	mg/Kg

The samples were analyzed as specified on the enclosed chain of custody. Analytical non-conformances have been noted on the report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

Data Qualifiers and Descriptors

Data Qualifier:

#:	Recovery is not within acceptable control limits.
*:	In the QC section, sample results have been taken directly from the ICP reading. No preparation factor has been applied.
B:	Analyte was present in the Method Blank.
D:	Result is from a diluted analysis.
E:	Result is beyond calibration limits and is estimated.
H:	Analysis was performed over the allowed holding time due to circumstances which were beyond laboratory control.
J:	Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL).
M:	Matrix spike recovery is outside control limits due to matrix interference. Laboratory Control Sample recovery was acceptable.
MCL:	Maximum Contaminant Level
NS:	No Standard Available
S6:	Surrogate recovery is outside control limits due to matrix interference.
S8:	The analysis of the sample required a dilution such that the surrogate concentration was diluted below the method acceptance criteria.
X:	Results represent LCS and LCSD data.

Definition:

%Limit:	Percent acceptable limits.
%REC:	Percent recovery.
Con.L:	Acceptable Control Limits
Conce:	Added concentration to the sample.
LCS:	Laboratory Control Sample
MDL:	Method Detection Limit is a statistically derived number which is specific for each instrument, each method, and each compound. It indicates a distinctively detectable quantity with 99% probability.

Data Qualifiers and Descriptors

MS:	Matrix Spike
MS DU:	Matrix Spike Duplicate
ND:	Analyte was not detected in the sample at or above MDL.
PQL:	Practical Quantitation Limit or ML (Minimum Level as per RWQCB) is the minimum concentration that can be quantified with more than 99% confidence. Taking into account all aspects of the entire analytical instrumentation and practice.
Recov:	Recovered concentration in the sample.
RPD:	Relative Percent Difference

CERTIFICATE OF ANALYSIS CASE NARRATIVE

AETL received 6 samples with the following specification on 09/23/2014.

Lab ID	Sample ID	Sample Date	Matrix	Quantity Of Containers
74487.01	S-36	09/23/2014	Soil	1
74487.02	S-37	09/23/2014	Soil	1
74487.03	S-38	09/23/2014	Soil	1
74487.04	S-39	09/23/2014	Soil	1
74487.05	S-40	09/23/2014	Soil	1
74487.06	S-41	09/23/2014	Soil	1

Method ^ Submethod	Req Date	Priority	TAT	Units
(6010B.LEAD)	09/25/2014	3	Rush	mg/Kg

The samples were analyzed as specified on the enclosed chain of custody. Analytical non-conformances have been noted on the report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

*:	In the QC section, sample results have been taken directly from the ICP reading. No preparation factor has been applied.
B:	Analyte was present in the Method Blank.
D:	Result is from a diluted analysis.
E:	Result is beyond calibration limits and is estimated.
H:	Analysis was performed over the allowed holding time due to circumstances which were beyond laboratory control.
J:	Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL).
M:	Matrix spike recovery is outside control limits due to matrix interference. Laboratory Control Sample recovery was acceptable.
MCL:	Maximum Contaminant Level
NS:	No Standard Available
S6:	Surrogate recovery is outside control limits due to matrix interference.
S8:	The analysis of the sample required a dilution such that the surrogate concentration was diluted below the method acceptance criteria.
X:	Results represent LCS and LCSD data.

Definition:

%Limi:	Percent acceptable limits.
%REC:	Percent recovery.
Con.L:	Acceptable Control Limits
Conce:	Added concentration to the sample.
LCS:	Laboratory Control Sample
MDL:	Method Detection Limit is a statistically derived number which is specific for each instrument, each method, and each compound. It indicates a distinctively detectable quantity with 99% probability.

Data Qualifiers and Descriptors

MS:	Matrix Spike
MS DU:	Matrix Spike Duplicate
ND:	Analyte was not detected in the sample at or above MDL.
PQL:	Practical Quantitation Limit or ML (Minimum Level as per RWQCB) is the minimum concentration that can be quantified with more than 99% confidence. Taking into account all aspects of the entire analytical instrumentation and practice.
Recov:	Recovered concentration in the sample.
RPD:	Relative Percent Difference

Data Qualifiers and Descriptors

Data Qualifier:

#:	Recovery is not within acceptable control limits.
*:	In the QC section, sample results have been taken directly from the ICP reading. No preparation factor has been applied.
B:	Analyte was present in the Method Blank.
D:	Result is from a diluted analysis.
E:	Result is beyond calibration limits and is estimated.
H:	Analysis was performed over the allowed holding time due to circumstances which were beyond laboratory control.
J:	Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL).
M:	Matrix spike recovery is outside control limits due to matrix interference. Laboratory Control Sample recovery was acceptable.
MCL:	Maximum Contaminant Level
NS:	No Standard Available
S6:	Surrogate recovery is outside control limits due to matrix interference.
S8:	The analysis of the sample required a dilution such that the surrogate concentration was diluted below the method acceptance criteria.
X:	Results represent LCS and LCSD data.

Definition:

%Limi:	Percent acceptable limits.
%REC:	Percent recovery.
Con.L:	Acceptable Control Limits
Conce:	Added concentration to the sample.
LCS:	Laboratory Control Sample
MDL:	Method Detection Limit is a statistically derived number which is specific for each instrument, each method, and each compound. It indicates a distinctively detectable quantity with 99% probability.

American Environmental Testing Laboratory Inc.

Data Qualifiers and Descriptors

MS:	Matrix Spike
MS DU:	Matrix Spike Duplicate
ND:	Analyte was not detected in the sample at or above MDL.
PQL:	Practical Quantitation Limit or ML (Minimum Level as per RWQCB) is the minimum concentration that can be quantified with more than 99% confidence. Taking into account all aspects of the entire analytical instrumentation and practice.
Recov:	Recovered concentration in the sample.
RPD:	Relative Percent Difference

CERTIFICATE OF ANALYSIS CASE NARRATIVE

AETL received 5 samples with the following specification on 10/01/2014.

Lab ID	Sample ID	Sample Date	Matrix	Quantity Of Containers		
74586.01	DSP-6	10/01/2014	Soil	1		
	Method ^ Submethod		Req Date	Priority	TAT	Units
	(6010B/7000CAM)		10/02/2014	2	Rush	mg/Kg
74586.02	S-57	10/01/2014	Soil	1		
74586.03	S-58	10/01/2014	Soil	1		
74586.04	S-59	10/01/2014	Soil	1		
74586.05	S-60	10/01/2014	Soil	1		
	Method ^ Submethod		Req Date	Priority	TAT	Units
	(6010B.LEAD)		10/02/2014	2	Rush	mg/Kg

The samples were analyzed as specified on the enclosed chain of custody. Analytical non-conformances have been noted on the report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

Data Qualifiers and Descriptors

Data Qualifier:

#:	Recovery is not within acceptable control limits.
*:	In the QC section, sample results have been taken directly from the ICP reading. No preparation factor has been applied.
B:	Analyte was present in the Method Blank.
D:	Result is from a diluted analysis.
E:	Result is beyond calibration limits and is estimated.
H:	Analysis was performed over the allowed holding time due to circumstances which were beyond laboratory control.
J:	Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL).
M:	Matrix spike recovery is outside control limits due to matrix interference. Laboratory Control Sample recovery was acceptable.
MCL:	Maximum Contaminant Level
NS:	No Standard Available
S6:	Surrogate recovery is outside control limits due to matrix interference.
S8:	The analysis of the sample required a dilution such that the surrogate concentration was diluted below the method acceptance criteria.
X:	Results represent LCS and LCSD data.

Definition:

%Limi:	Percent acceptable limits.
%REC:	Percent recovery.
Con.L:	Acceptable Control Limits
Conce:	Added concentration to the sample.
LCS:	Laboratory Control Sample
MDL:	Method Detection Limit is a statistically derived number which is specific for each instrument, each method, and each compound. It indicates a distinctively detectable quantity with 99% probability.

American Environmental Testing Laboratory Inc.

Data Qualifiers and Descriptors

MS:	Matrix Spike
MS DU:	Matrix Spike Duplicate
ND:	Analyte was not detected in the sample at or above MDL.
PQL:	Practical Quantitation Limit or ML (Minimum Level as per RWQCB) is the minimum concentration that can be quantified with more than 99% confidence. Taking into account all aspects of the entire analytical instrumentation and practice.
Recov:	Recovered concentration in the sample.
RPD:	Relative Percent Difference

CERTIFICATE OF ANALYSIS CASE NARRATIVE

AETL received 13 samples with the following specification on 10/02/2014.

Lab ID	Sample ID	Sample Date	Matrix	Quantity Of Containers
74604.01	S-61	10/02/2014	Soil	1
74604.02	S-62	10/02/2014	Soil	1
74604.03	S-63	10/02/2014	Soil	1
74604.04	S-64	10/02/2014	Soil	1
74604.05	S-65	10/02/2014	Soil	1
74604.06	S-66	10/02/2014	Soil	1
74604.07	S-67	10/02/2014	Soil	1
74604.08	S-68	10/02/2014	Soil	1
74604.09	S-69	10/02/2014	Soil	1
74604.10	S-70	10/02/2014	Soil	1
74604.11	S-71	10/02/2014	Soil	1
74604.12	S-72	10/02/2014	Soil	1
74604.13	S-73	10/02/2014	Soil	1

Method ^ Submethod	Req Date	Priority	TAT	Units
(6010B.LEAD)	10/03/2014	2	Rush	mg/Kg

The samples were analyzed as specified on the enclosed chain of custody.
No analytical non-conformances were encountered.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

Data Qualifiers and Descriptors

Data Qualifier:

#:	Recovery is not within acceptable control limits.
*:	In the QC section, sample results have been taken directly from the ICP reading. No preparation factor has been applied.
B:	Analyte was present in the Method Blank.
D:	Result is from a diluted analysis.
E:	Result is beyond calibration limits and is estimated.
H:	Analysis was performed over the allowed holding time due to circumstances which were beyond laboratory control.
J:	Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL).
M:	Matrix spike recovery is outside control limits due to matrix interference. Laboratory Control Sample recovery was acceptable.
MCL:	Maximum Contaminant Level
NS:	No Standard Available
S6:	Surrogate recovery is outside control limits due to matrix interference.
S8:	The analysis of the sample required a dilution such that the surrogate concentration was diluted below the method acceptance criteria.
X:	Results represent LCS and LCSD data.

Definition:

%Limi:	Percent acceptable limits.
%REC:	Percent recovery.
Con.L:	Acceptable Control Limits
Conce:	Added concentration to the sample.
LCS:	Laboratory Control Sample
MDL:	Method Detection Limit is a statistically derived number which is specific for each instrument, each method, and each compound. It indicates a distinctively detectable quantity with 99% probability.

Data Qualifiers and Descriptors

MS:	Matrix Spike
MS DU:	Matrix Spike Duplicate
ND:	Analyte was not detected in the sample at or above MDL.
PQL:	Practical Quantitation Limit or ML (Minimum Level as per RWQCB) is the minimum concentration that can be quantified with more than 99% confidence. Taking into account all aspects of the entire analytical instrumentation and practice.
Recov:	Recovered concentration in the sample.
RPD:	Relative Percent Difference

CERTIFICATE OF ANALYSIS CASE NARRATIVE

AETL received 2 samples with the following specification on 02/17/2015.

Lab ID	Sample ID	Sample Date	Matrix	Quantity Of Containers		
76011.01	S77	02/14/2015	Soil	1		
	Method ^ Submethod		Req Date	Priority	TAT	Units
	(6010B/7000CAM)		02/18/2015	2	Rush	mg/Kg
76011.02	S78	02/14/2015	Soil	1		
	Method ^ Submethod		Req Date	Priority	TAT	Units
	(6010B.LEAD)		02/18/2015	2	Rush	mg/Kg

The samples were analyzed as specified on the enclosed chain of custody. Analytical non-conformances have been noted on the report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

Data Qualifiers and Descriptors

Data Qualifier:

#:	Recovery is not within acceptable control limits.
*:	In the QC section, sample results have been taken directly from the ICP reading. No preparation factor has been applied.
B:	Analyte was present in the Method Blank.
D:	Result is from a diluted analysis.
E:	Result is beyond calibration limits and is estimated.
H:	Analysis was performed over the allowed holding time due to circumstances which were beyond laboratory control.
J:	Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL).
M:	Matrix spike recovery is outside control limits due to matrix interference. Laboratory Control Sample recovery was acceptable.
MCL:	Maximum Contaminant Level
NS:	No Standard Available
S6:	Surrogate recovery is outside control limits due to matrix interference.
S8:	The analysis of the sample required a dilution such that the surrogate concentration was diluted below the method acceptance criteria.
X:	Results represent LCS and LCSD data.

Definition:

%Limi:	Percent acceptable limits.
%REC:	Percent recovery.
Con.L:	Acceptable Control Limits
Conce:	Added concentration to the sample.
LCS:	Laboratory Control Sample
MDL:	Method Detection Limit is a statistically derived number which is specific for each instrument, each method, and each compound. It indicates a distinctively detectable quantity with 99% probability.

American Environmental Testing Laboratory Inc.

2834 & 2908 North Naomi Street, Burbank, CA 91504 • DOHS NO: 1541, LACSD NO: 10181

Data Qualifiers and Descriptors

MS:	Matrix Spike
MS DU:	Matrix Spike Duplicate
ND:	Analyte was not detected in the sample at or above MDL.
PQL:	Practical Quantitation Limit or ML (Minimum Level as per RWQCB) is the minimum concentration that can be quantified with more than 99% confidence. Taking into account all aspects of the entire analytical instrumentation and practice.
Recov:	Recovered concentration in the sample.
RPD:	Relative Percent Difference

Data Qualifiers and Descriptors

Data Qualifier:

#:	Recovery is not within acceptable control limits.
*:	In the QC section, sample results have been taken directly from the ICP reading. No preparation factor has been applied.
B:	Analyte was present in the Method Blank.
D:	Result is from a diluted analysis.
E:	Result is beyond calibration limits and is estimated.
H:	Analysis was performed over the allowed holding time due to circumstances which were beyond laboratory control.
J:	Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL).
M:	Matrix spike recovery is outside control limits due to matrix interference. Laboratory Control Sample recovery was acceptable.
MCL:	Maximum Contaminant Level
NS:	No Standard Available
S6:	Surrogate recovery is outside control limits due to matrix interference.
S8:	The analysis of the sample required a dilution such that the surrogate concentration was diluted below the method acceptance criteria.
X:	Results represent LCS and LCSD data.

Definition:

%Limi:	Percent acceptable limits.
%REC:	Percent recovery.
Con.L:	Acceptable Control Limits
Conce:	Added concentration to the sample.
LCS:	Laboratory Control Sample
MDL:	Method Detection Limit is a statistically derived number which is specific for each instrument, each method, and each compound. It indicates a distinctively detectable quantity with 99% probability.

American Environmental Testing Laboratory Inc.

Data Qualifiers and Descriptors

MS:	Matrix Spike
MS DU:	Matrix Spike Duplicate
ND:	Analyte was not detected in the sample at or above MDL.
PQL:	Practical Quantitation Limit or ML (Minimum Level as per RWQCB) is the minimum concentration that can be quantified with more than 99% confidence. Taking into account all aspects of the entire analytical instrumentation and practice.
Recov:	Recovered concentration in the sample.
RPD:	Relative Percent Difference

CERTIFICATE OF ANALYSIS CASE NARRATIVE

AETL received 1 samples with the following specification on 09/30/2014.

Lab ID	Sample ID	Sample Date	Matrix	Quantity Of Containers		
74573.01	F-2	09/30/2014	Soil	1		
	Method ^ Submethod		Req Date	Priority	TAT	Units
	(6010B/7000CAM)		10/02/2014	3	Rush	mg/Kg
	(8260B)		10/02/2014	3	Rush	ug/Kg
	(M8015D) ^ C13-C40		10/02/2014	3	Rush	mg/Kg
	(M8015G)		10/02/2014	3	Rush	mg/Kg

The samples were analyzed as specified on the enclosed chain of custody. Analytical non-conformances have been noted on the report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

Data Qualifiers and Descriptors

Data Qualifier:

#:	Recovery is not within acceptable control limits.
*:	In the QC section, sample results have been taken directly from the ICP reading. No preparation factor has been applied.
B:	Analyte was present in the Method Blank.
D:	Result is from a diluted analysis.
E:	Result is beyond calibration limits and is estimated.
H:	Analysis was performed over the allowed holding time due to circumstances which were beyond laboratory control.
J:	Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL).
M:	Matrix spike recovery is outside control limits due to matrix interference. Laboratory Control Sample recovery was acceptable.
MCL:	Maximum Contaminant Level
NS:	No Standard Available
S6:	Surrogate recovery is outside control limits due to matrix interference.
S8:	The analysis of the sample required a dilution such that the surrogate concentration was diluted below the method acceptance criteria.
X:	Results represent LCS and LCSD data.

Definition:

%Limi:	Percent acceptable limits.
%REC:	Percent recovery.
Con.L:	Acceptable Control Limits
Conce:	Added concentration to the sample.
LCS:	Laboratory Control Sample
MDL:	Method Detection Limit is a statistically derived number which is specific for each instrument, each method, and each compound. It indicates a distinctively detectable quantity with 99% probability.

American Environmental Testing Laboratory Inc.

Data Qualifiers and Descriptors

MS:	Matrix Spike
MS DU:	Matrix Spike Duplicate
ND:	Analyte was not detected in the sample at or above MDL.
PQL:	Practical Quantitation Limit or ML (Minimum Level as per RWQCB) is the minimum concentration that can be quantified with more than 99% confidence. Taking into account all aspects of the entire analytical instrumentation and practice.
Recov:	Recovered concentration in the sample.
RPD:	Relative Percent Difference

CERTIFICATE OF ANALYSIS CASE NARRATIVE

AETL received 1 samples with the following specification on 10/01/2014.

Lab ID	Sample ID	Sample Date	Matrix	Quantity Of Containers		
74587.01	F-3	10/01/2014	Soil	1		
	Method ^ Submethod		Req Date	Priority	TAT	Units
	(6010B/7000CAM)		10/03/2014	3	Rush	mg/Kg
	(8260B)		10/03/2014	3	Rush	ug/Kg
	(M8015D) ^ C13-C40		10/03/2014	3	Rush	mg/Kg
	(M8015G)		10/03/2014	3	Rush	mg/Kg

The samples were analyzed as specified on the enclosed chain of custody. Analytical non-conformances have been noted on the report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

Data Qualifiers and Descriptors

Data Qualifier:

#:	Recovery is not within acceptable control limits.
*:	In the QC section, sample results have been taken directly from the ICP reading. No preparation factor has been applied.
B:	Analyte was present in the Method Blank.
D:	Result is from a diluted analysis.
E:	Result is beyond calibration limits and is estimated.
H:	Analysis was performed over the allowed holding time due to circumstances which were beyond laboratory control.
J:	Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL).
M:	Matrix spike recovery is outside control limits due to matrix interference. Laboratory Control Sample recovery was acceptable.
MCL:	Maximum Contaminant Level
NS:	No Standard Available
S6:	Surrogate recovery is outside control limits due to matrix interference.
S8:	The analysis of the sample required a dilution such that the surrogate concentration was diluted below the method acceptance criteria.
X:	Results represent LCS and LCSD data.

Definition:

%Limi:	Percent acceptable limits.
%REC:	Percent recovery.
Con.L:	Acceptable Control Limits
Conce:	Added concentration to the sample.
LCS:	Laboratory Control Sample
MDL:	Method Detection Limit is a statistically derived number which is specific for each instrument, each method, and each compound. It indicates a distinctively detectable quantity with 99% probability.

American Environmental Testing Laboratory Inc.

Data Qualifiers and Descriptors

MS:	Matrix Spike
MS DU:	Matrix Spike Duplicate
ND:	Analyte was not detected in the sample at or above MDL.
PQL:	Practical Quantitation Limit or ML (Minimum Level as per RWQCB) is the minimum concentration that can be quantified with more than 99% confidence. Taking into account all aspects of the entire analytical instrumentation and practice.
Recov:	Recovered concentration in the sample.
RPD:	Relative Percent Difference

CERTIFICATE OF ANALYSIS CASE NARRATIVE

AETL received 1 samples with the following specification on 10/02/2014.

Lab ID	Sample ID	Sample Date	Matrix	Quantity Of Containers		
74605.01	F-4	10/02/2014	Soil	1		
	Method ^ Submethod		Req Date	Priority	TAT	Units
	(6010B/7000CAM)		10/06/2014	3	Rush	mg/Kg
	(8260B)		10/06/2014	3	Rush	ug/Kg
	(M8015D) ^ C13-C40		10/06/2014	3	Rush	mg/Kg
	(M8015G)		10/06/2014	3	Rush	mg/Kg

The samples were analyzed as specified on the enclosed chain of custody. Analytical non-conformances have been noted on the report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

Data Qualifiers and Descriptors

Data Qualifier:

#:	Recovery is not within acceptable control limits.
*:	In the QC section, sample results have been taken directly from the ICP reading. No preparation factor has been applied.
B:	Analyte was present in the Method Blank.
D:	Result is from a diluted analysis.
E:	Result is beyond calibration limits and is estimated.
H:	Analysis was performed over the allowed holding time due to circumstances which were beyond laboratory control.
J:	Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL).
M:	Matrix spike recovery is outside control limits due to matrix interference. Laboratory Control Sample recovery was acceptable.
MCL:	Maximum Contaminant Level
NS:	No Standard Available
S6:	Surrogate recovery is outside control limits due to matrix interference.
S8:	The analysis of the sample required a dilution such that the surrogate concentration was diluted below the method acceptance criteria.
X:	Results represent LCS and LCSD data.

Definition:

%Limi:	Percent acceptable limits.
%REC:	Percent recovery.
Con.L:	Acceptable Control Limits
Conce:	Added concentration to the sample.
LCS:	Laboratory Control Sample
MDL:	Method Detection Limit is a statistically derived number which is specific for each instrument, each method, and each compound. It indicates a distinctively detectable quantity with 99% probability.

Data Qualifiers and Descriptors

MS:	Matrix Spike
MS DU:	Matrix Spike Duplicate
ND:	Analyte was not detected in the sample at or above MDL.
PQL:	Practical Quantitation Limit or ML (Minimum Level as per RWQCB) is the minimum concentration that can be quantified with more than 99% confidence. Taking into account all aspects of the entire analytical instrumentation and practice.
Recov:	Recovered concentration in the sample.
RPD:	Relative Percent Difference

CERTIFICATE OF ANALYSIS CASE NARRATIVE

AETL received 1 samples with the following specification on 10/03/2014.

Lab ID	Sample ID	Sample Date	Matrix	Quantity Of Containers		
74621.01	F-5	10/03/2014	Soil	1		
	Method ^ Submethod		Req Date	Priority	TAT	Units
	(6010B/7000CAM)		10/06/2014	2	Rush	mg/Kg
	(8260B)		10/06/2014	2	Rush	ug/Kg
	(M8015D) ^ C13-C40		10/06/2014	2	Rush	mg/Kg
	(M8015G)		10/06/2014	2	Rush	mg/Kg

The samples were analyzed as specified on the enclosed chain of custody. Analytical non-conformances have been noted on the report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

Data Qualifiers and Descriptors

Data Qualifier:

#:	Recovery is not within acceptable control limits.
*:	In the QC section, sample results have been taken directly from the ICP reading. No preparation factor has been applied.
B:	Analyte was present in the Method Blank.
D:	Result is from a diluted analysis.
E:	Result is beyond calibration limits and is estimated.
H:	Analysis was performed over the allowed holding time due to circumstances which were beyond laboratory control.
J:	Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL).
M:	Matrix spike recovery is outside control limits due to matrix interference. Laboratory Control Sample recovery was acceptable.
MCL:	Maximum Contaminant Level
NS:	No Standard Available
S6:	Surrogate recovery is outside control limits due to matrix interference.
S8:	The analysis of the sample required a dilution such that the surrogate concentration was diluted below the method acceptance criteria.
X:	Results represent LCS and LCSD data.

Definition:

%Limi:	Percent acceptable limits.
%REC:	Percent recovery.
Con.L:	Acceptable Control Limits
Conce:	Added concentration to the sample.
LCS:	Laboratory Control Sample
MDL:	Method Detection Limit is a statistically derived number which is specific for each instrument, each method, and each compound. It indicates a distinctively detectable quantity with 99% probability.

American Environmental Testing Laboratory Inc.

2834 & 2908 North Naomi Street, Burbank, CA 91504 • DOHS NO: 1541, LACSD NO: 10181
Tel: (888) 288-AETL • (818) 845-8200 • Fax: (818) 845-8840 • www.aetlab.com

Data Qualifiers and Descriptors

MS:	Matrix Spike
MS DU:	Matrix Spike Duplicate
ND:	Analyte was not detected in the sample at or above MDL.
PQL:	Practical Quantitation Limit or ML (Minimum Level as per RWQCB) is the minimum concentration that can be quantified with more than 99% confidence. Taking into account all aspects of the entire analytical instrumentation and practice.
Recov:	Recovered concentration in the sample.
RPD:	Relative Percent Difference

CERTIFICATE OF ANALYSIS CASE NARRATIVE

AETL received 1 samples with the following specification on 10/08/2014.

Lab ID	Sample ID	Sample Date	Matrix	Quantity Of Containers		
74671.01	F-6	10/06/2014	Soil	1		
	Method ^ Submethod		Req Date	Priority	TAT	Units
	(6010B/7000CAM)		10/15/2014	2	Normal	mg/Kg
	(8260B)		10/15/2014	2	Normal	ug/Kg
	(M8015D) ^ C13-C40		10/15/2014	2	Normal	mg/Kg
	(M8015G)		10/15/2014	2	Normal	mg/Kg

The samples were analyzed as specified on the enclosed chain of custody. Analytical non-conformances have been noted on the report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

Data Qualifiers and Descriptors

Data Qualifier:

#:	Recovery is not within acceptable control limits.
*:	In the QC section, sample results have been taken directly from the ICP reading. No preparation factor has been applied.
B:	Analyte was present in the Method Blank.
D:	Result is from a diluted analysis.
E:	Result is beyond calibration limits and is estimated.
H:	Analysis was performed over the allowed holding time due to circumstances which were beyond laboratory control.
J:	Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL).
M:	Matrix spike recovery is outside control limits due to matrix interference. Laboratory Control Sample recovery was acceptable.
MCL:	Maximum Contaminant Level
NS:	No Standard Available
S6:	Surrogate recovery is outside control limits due to matrix interference.
S8:	The analysis of the sample required a dilution such that the surrogate concentration was diluted below the method acceptance criteria.
X:	Results represent LCS and LCSD data.

Definition:

%Limi:	Percent acceptable limits.
%REC:	Percent recovery.
Con.L:	Acceptable Control Limits
Conce:	Added concentration to the sample.
LCS:	Laboratory Control Sample
MDL:	Method Detection Limit is a statistically derived number which is specific for each instrument, each method, and each compound. It indicates a distinctively detectable quantity with 99% probability.

American Environmental Testing Laboratory Inc.

Data Qualifiers and Descriptors

MS:	Matrix Spike
MS DU:	Matrix Spike Duplicate
ND:	Analyte was not detected in the sample at or above MDL.
PQL:	Practical Quantitation Limit or ML (Minimum Level as per RWQCB) is the minimum concentration that can be quantified with more than 99% confidence. Taking into account all aspects of the entire analytical instrumentation and practice.
Recov:	Recovered concentration in the sample.
RPD:	Relative Percent Difference

CERTIFICATE OF ANALYSIS CASE NARRATIVE

AETL received 10 samples with the following specification on 10/08/2014.

Lab ID	Sample ID	Sample Date	Matrix	Quantity Of Containers	
74663.01	B4-1	10/08/2014	Soil	4	
74663.03	B4-3	10/08/2014	Soil	4	
74663.05	B6-2	10/08/2014	Soil	4	
74663.08	B9-2	10/08/2014	Soil	4	
74663.10	B9-4	10/08/2014	Soil	4	
	Method ^ Submethod	Req Date	Priority	TAT	Units
	(8260B)	10/09/2014	2	Rush	ug/Kg
74663.02	B4-2	10/08/2014	Soil		4
74663.04	B6-1	10/08/2014	Soil		4
74663.06	B6-3	10/08/2014	Soil		4
74663.07	B9-1	10/08/2014	Soil		4
74663.09	B9-3	10/08/2014	Soil		4
	Method ^ Submethod	Req Date	Priority	TAT	Units
	(6010B/7000CAM)	10/09/2014	2	Rush	mg/Kg
	(8260B)	10/09/2014	2	Rush	ug/Kg
	(M8015D) ^ C13-C40	10/09/2014	2	Rush	mg/Kg
	(M8015G)	10/09/2014	2	Rush	mg/Kg

The samples were analyzed as specified on the enclosed chain of custody. Analytical non-conformances have been noted on the report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

Data Qualifiers and Descriptors

Data Qualifier:

#:	Recovery is not within acceptable control limits.
*:	In the QC section, sample results have been taken directly from the ICP reading. No preparation factor has been applied.
B:	Analyte was present in the Method Blank.
D:	Result is from a diluted analysis.
E:	Result is beyond calibration limits and is estimated.
H:	Analysis was performed over the allowed holding time due to circumstances which were beyond laboratory control.
J:	Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL).
M:	Matrix spike recovery is outside control limits due to matrix interference. Laboratory Control Sample recovery was acceptable.
MCL:	Maximum Contaminant Level
NS:	No Standard Available
S6:	Surrogate recovery is outside control limits due to matrix interference.
S8:	The analysis of the sample required a dilution such that the surrogate concentration was diluted below the method acceptance criteria.
X:	Results represent LCS and LCSD data.

Definition:

%Limi:	Percent acceptable limits.
%REC:	Percent recovery.
Con.L:	Acceptable Control Limits
Conce:	Added concentration to the sample.
LCS:	Laboratory Control Sample
MDL:	Method Detection Limit is a statistically derived number which is specific for each instrument, each method, and each compound. It indicates a distinctively detectable quantity with 99% probability.

Tel: (888) 288-AETL • (818) 845-8200 • Fax: (818) 845-8840 • www.aetlab.com

Data Qualifiers and Descriptors

MS:	Matrix Spike
MS DU:	Matrix Spike Duplicate
ND:	Analyte was not detected in the sample at or above MDL.
PQL:	Practical Quantitation Limit or ML (Minimum Level as per RWQCB) is the minimum concentration that can be quantified with more than 99% confidence. Taking into account all aspects of the entire analytical instrumentation and practice.
Recov:	Recovered concentration in the sample.
RPD:	Relative Percent Difference

CERTIFICATE OF ANALYSIS CASE NARRATIVE

AETL received 10 samples with the following specification on 10/08/2014.

Lab ID	Sample ID	Sample Date	Matrix	Quantity Of Containers		
74663.01	B4-1	10/08/2014	Soil	4		
74663.03	B4-3	10/08/2014	Soil	4		
74663.05	B6-2	10/08/2014	Soil	4		
74663.08	B9-2	10/08/2014	Soil	4		
74663.10	B9-4	10/08/2014	Soil	4		
	Method ^ Submethod		Req Date	Priority	TAT	Units
	(8260B)		10/09/2014	2	Rush	ug/Kg
74663.02	B4-2	10/08/2014	Soil			4
74663.04	B6-1	10/08/2014	Soil			4
74663.06	B6-3	10/08/2014	Soil			4
74663.07	B9-1	10/08/2014	Soil			4
74663.09	B9-3	10/08/2014	Soil			4
	Method ^ Submethod		Req Date	Priority	TAT	Units
	(6010B/7000CAM)		10/09/2014	2	Rush	mg/Kg
	(8260B)		10/09/2014	2	Rush	ug/Kg
	(M8015D) ^ C13-C40		10/09/2014	2	Rush	mg/Kg
	(M8015G)		10/09/2014	2	Rush	mg/Kg

The samples were analyzed as specified on the enclosed chain of custody. Analytical non-conformances have been noted on the report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

Data Qualifiers and Descriptors

Data Qualifier:

#:	Recovery is not within acceptable control limits.
*:	In the QC section, sample results have been taken directly from the ICP reading. No preparation factor has been applied.
B:	Analyte was present in the Method Blank.
D:	Result is from a diluted analysis.
E:	Result is beyond calibration limits and is estimated.
H:	Analysis was performed over the allowed holding time due to circumstances which were beyond laboratory control.
J:	Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL).
M:	Matrix spike recovery is outside control limits due to matrix interference. Laboratory Control Sample recovery was acceptable.
MCL:	Maximum Contaminant Level
NS:	No Standard Available
S6:	Surrogate recovery is outside control limits due to matrix interference.
S8:	The analysis of the sample required a dilution such that the surrogate concentration was diluted below the method acceptance criteria.
X:	Results represent LCS and LCSD data.

Definition:

%Limi:	Percent acceptable limits.
%REC:	Percent recovery.
Con.L:	Acceptable Control Limits
Conce:	Added concentration to the sample.
LCS:	Laboratory Control Sample
MDL:	Method Detection Limit is a statistically derived number which is specific for each instrument, each method, and each compound. It indicates a distinctively detectable quantity with 99% probability.

American Environmental Testing Laboratory Inc.

Data Qualifiers and Descriptors

MS:	Matrix Spike
MS DU:	Matrix Spike Duplicate
ND:	Analyte was not detected in the sample at or above MDL.
PQL:	Practical Quantitation Limit or ML (Minimum Level as per RWQCB) is the minimum concentration that can be quantified with more than 99% confidence. Taking into account all aspects of the entire analytical instrumentation and practice.
Recov:	Recovered concentration in the sample.
RPD:	Relative Percent Difference

CERTIFICATE OF ANALYSIS CASE NARRATIVE

AETL received 3 samples with the following specification on 10/16/2014.

Lab ID	Sample ID	Sample Date	Matrix	Quantity Of Containers
74753.01	F-7	10/13/2014	Soil	1
74753.02	F-8	10/13/2014	Soil	1
74753.03	F-9	10/13/2014	Soil	1

Method ^ Submethod	Req Date	Priority	TAT	Units
(6010B/7000CAM)	10/20/2014	4	Rush	mg/Kg
(8260B)	10/20/2014	4	Rush	ug/Kg
(M8015D) ^ C13-C40	10/20/2014	4	Rush	mg/Kg
(M8015G)	10/20/2014	4	Rush	mg/Kg

The samples were analyzed as specified on the enclosed chain of custody. Analytical non-conformances have been noted on the report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

Data Qualifiers and Descriptors

Data Qualifier:

#:	Recovery is not within acceptable control limits.
*:	In the QC section, sample results have been taken directly from the ICP reading. No preparation factor has been applied.
B:	Analyte was present in the Method Blank.
D:	Result is from a diluted analysis.
E:	Result is beyond calibration limits and is estimated.
H:	Analysis was performed over the allowed holding time due to circumstances which were beyond laboratory control.
J:	Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL).
M:	Matrix spike recovery is outside control limits due to matrix interference. Laboratory Control Sample recovery was acceptable.
MCL:	Maximum Contaminant Level
NS:	No Standard Available
S6:	Surrogate recovery is outside control limits due to matrix interference.
S8:	The analysis of the sample required a dilution such that the surrogate concentration was diluted below the method acceptance criteria.
X:	Results represent LCS and LCSD data.

Definition:

%Limi:	Percent acceptable limits.
%REC:	Percent recovery.
Con.L:	Acceptable Control Limits
Conce:	Added concentration to the sample.
LCS:	Laboratory Control Sample
MDL:	Method Detection Limit is a statistically derived number which is specific for each instrument, each method, and each compound. It indicates a distinctively detectable quantity with 99% probability.

American Environmental Testing Laboratory Inc.

2834 & 2908 North Naomi Street, Burbank, CA 91504 • DOHS NO: 1541, LACSD NO: 10181
Tel: (888) 288-AETL • (818) 845-8200 • Fax: (818) 845-8840 • www.aetlab.com

Data Qualifiers and Descriptors

MS:	Matrix Spike
MS DU:	Matrix Spike Duplicate
ND:	Analyte was not detected in the sample at or above MDL.
PQL:	Practical Quantitation Limit or ML (Minimum Level as per RWQCB) is the minimum concentration that can be quantified with more than 99% confidence. Taking into account all aspects of the entire analytical instrumentation and practice.
Recov:	Recovered concentration in the sample.
RPD:	Relative Percent Difference

This Phase I Environmental Site Assessment Report for the San Francisco Yard located at Anaheim Street and San Francisco Avenue, Long Beach, California, dated July 13, 2015, was prepared by Ashley Hutchens and reviewed by Kevin Green.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312. The resumes for the individuals below are included in **Appendix G**. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

SCS Engineers (SCS) was retained by Alere Property Group, LLC (the “User”) to prepare a Phase I Environmental Site Assessment (ESA) of the San Francisco Yard located at Anaheim Street and San Francisco Avenue in Long Beach, California (the “Property”). This assessment was performed in conformance with 40 CFR 312, Standards for Conducting All Appropriate Inquiries, and in general conformance with ASTM E1527-13.

- The Property consists of 10.74 acres of outdoor storage yard and is comprised of approximately five and a half parcels in Long Beach, California formerly associated with the Former Long Beach Public Service Yard (the “Former Service Yard”). Four and a half of these parcels are on contiguous city blocks and also include the intervening street rights-of-way (14th, Cowles, 15th, and 16th Streets) which were incorporated into the Former Service Yard and the current various storage yards. Numerous addresses have currently or historically been associated with the Property and it is important to note that operations on this portion of the Property were sometimes included under the address of 1725 San Francisco Avenue, although this address is physically north of the Property and still occupied by the City of Long Beach Public Service Yard.

The northern-most parcel (940 Pacific Coast Highway, is located on the north side of the adjacent city block, approximately 700 feet north of the other parcels.

- The assigned Los Angeles County Tax Assessor’s Parcel Numbers have varied in recent years and currently are (from north to south) 7271-017-015 (the northernmost noncontiguous parcel), 7271-012-020, 7271-012-023, eastern portion of 7271-011-008, 7271-008-013, and the most southerly parcel does not currently have an associated APN (may be due to recent or ongoing parcel change activity). In addition, APNs 7271-012-020, 7271-012-023, 7271-011-008 (eastern portion), and 7271-008-013 are currently being re-parceled. Certificate of Compliance No. 1411-08A (for APNs 7271-012-020 and 7271-012-023) and No. 1411-08C (for 7271-011-008 [eastern portion] and 7271-008-013) have been filed in official records of the Recorder’s Office in Los Angeles County.
- The Property is currently occupied by three storage yards as follows (**Figure 3**): (1) The northerly noncontiguous parcel (APN 7271-017-015) is occupied by Ocean Blue Environmental Services, Inc. This parcel is approximately 0.34 acres and is used as a surplus storage yard for Ocean Blue’s trailers and materials. (2) The northern portion of the contiguous area of the Property (APNs 7271-012-020 and 7271-012-023) is occupied by BakerCorp as a storage yard (the “Baker Yard”). The Baker Yard is comprised of approximately 4.01 acres and is used to store their empty tanks. (3) The southern portion of the contiguous area of the Property (APNs 7271-011-008 [eastern portion only], 7271-008-013, and the most southerly parcel, which does not currently have an associated APN, is occupied by Petros Tubular Services, Inc. (Petros) as a storage yard (the “Petros Yard”). The Petros yard is comprised of approximately 6.39 acres and is used to store pipes and fittings associated with the oil and gas industry.
- Prior to use as the above-mentioned storage yards, the Property was predominantly used by the City of Long Beach for various operations performed by Long Beach public service

departments (e.g. traffic management, street maintenance, and landscaping). SCS previously conducted a Phase I Assessment (SCS, February 22, 2005) for the City of Long Beach, the findings of which (detailed in Section 11 of this report) concluded that numerous RECs were identified on the southern portion of the Property (excluding the noncontiguous northern parcel), including a carwash, two clarifiers, paint spray booth, chemical cabinet, former fueling station, fill material containing debris from the 1933 earthquake and petroleum-related impacts to soil and/or groundwater from underground fuel storage tanks. Further, historic operations on these parcels have included vehicle and equipment maintenance, painting shop, chemical laboratory, landscaping departments, machine shop, etc. The locations and nature of these operations appeared to be transitory, and it was determined possible that waste oils, various pesticides, oils, paint and solvents were spilled or leaked over the 70 plus years of operation.

However, since the initial Phase I ESA in 2005, numerous phases of investigation and remediation have been conducted to investigate the previously identified recognized environmental conditions (RECs), the statuses of which can be summarized as follows:

- A previous Phase II investigation (SCS, August 2, 2005), was conducted to address concerns identified in the 2005 Phase I ESA. Based on the results of this investigation, the previously identified hazardous materials storage areas, previous use of solvents, and former fueling station were considered historical recognized environmental conditions (HRECs).
- A 1,000-gallon unused UST was located on the western portion of the 16th Street right-of-way just south of APN 7271-012-020 (**Figure 4a**). This UST was originally meant to contain solvent/kerosene, was installed on July 19, 1988, and removed in January 1999. Regulatory closure was received from the Joint Powers Agency (currently the Long Beach Department of Health and Human Services [DHHS]) in the “No Further Action (NFA)” Letter dated March 25, 1999 (**Appendix E**), which also provided closure for three (3) other USTs associated with the Long Beach Public Works Yard at 1725 San Francisco (not associated with the Property).
- A 550-gallon gasoline UST was located in the 14th Street right-of-way just north of APN 7271-007-903 (**Figure 4b**). The UST was removed on August 30, 1995. A groundwater investigation and subsequent monitoring events were conducted. The RWQCB issued an NFA letter for the 550-gallon UST at the 14th Street right-of-way dated July 6, 2011 (**Appendix E**). The associated groundwater monitoring wells were subsequently abandoned on July 22, 2011. Because the RWQCB closed the case allowing residual contamination to remain in place, this former UST is considered a controlled recognized environmental condition (CREC). The RWQCB did not make any restrictions regarding the UST; however appropriate measures should be taken if digging is to occur in the area.
- Two 12,000-gallon USTs were located at the northeast corner of APN 7271-008-013 at 1445 San Francisco Avenue (**Figure 4b**). The tanks (one gasoline and one diesel), installed November 1998 were removed on July 2, 2008. As a result of SCS’s follow-up regarding the two 12,000-gallon USTs removed in 2008, the

RWQCB issued an NFA letter dated July 3, 2012. These two former USTs constitute an HREC with regards to the Property.

- A Phase II Investigation (conducted in November 2010) and geophysical survey (conducted in July 2012) were performed on the southern portion of former APN 7172-007-903 (no current APN assigned; **Figure 4b**) for the historical gas station located at 949 W. Anaheim, which is not a confirmed address of the Property, but was potentially located in this area. The November 2010 and July 2012 investigations of the southern portion of the Property found no obvious signs of former USTs or associated fuel-impacts indicative of a release associated with former USTs. As a result, the potential of a former service station at 949 W. Anaheim is considered to be an HREC.
- In April 2012, SCS inspected two suspect wells identified at 1601 San Francisco Avenue. The inspection, summarized in SCS' letter dated July 18, 2012, determined the wells to be 6-inch steel casings (the use of which was unknown), however they were determined not to be groundwater wells and therefore the well boxes and steel casings are determined to be a *de minimus condition*.
- Since the bulk of the fill soil (presumed 1933 earthquake debris) was anticipated on two parcels in the center of the contiguous portion of the Property (APNs 7271-011-008 and 7271-008-013) a Remedial Action Plan (SCS, March 2012, Revised May 2014) was prepared for this area. Very little fill soil existed on northerly and southerly portion of the contiguous portion of the Property (APN 7271-012-023 and previously identified APN 7271-007-005) and in order to expedite obtaining "no further action" letters for these parcels in anticipation of their eminent lease, a separate investigation under DHHS oversight was conducted. The results of this investigation (SCS, March 2, 2012) concluded that no evidence of significant impacts from lead or other metals associated with fill soil was identified. The DHHS subsequently issued NFA letters for these parcels dated July 11, 2012 (**Appendix E**). Therefore, the presence of fill soils on these two parcels is considered to be an HREC.
- In January 2013, clarifiers associated with former car wash (located within the fill area) and paint rinse areas were removed. Clarifier abandonment activities were conducted with oversight provided by Long Beach Fire Department and described in SCS's report, *Clarifier Removal Report, Former Long Beach Public Service Yard* dated February 2013. Approval of the clarifier closure was pending the remediation and an NFA has been requested from the DHHS. The clarifiers are considered to be an HREC, however, it is recommended that the follow-up with the DHHS be conducted until the NFA letter is issued.
- APNs 7271-011-008 and 7271-008-013, which held the bulk of the suspected earthquake debris, were remediated between August 2014 and February 2015. As part of the remedial excavation activities approximately 44,000 cubic yards of impacted material was excavated from the Property and placed on an area adjacent to the Property (western two-thirds of APN 7271-011-008) known as "the Long

Beach Parcel” (which is being re-purchased and will be maintained by the City of Long Beach) and is not a part of the Property.

Because debris extended beyond the Property boundaries, the impacted material was excavated to the extent possible without extending past the Property boundaries (i.e. into the river path). Therefore, impacted material will remain below the surface (and unexposed) in several other areas of the Property including: potentially beneath the building that remains on the Property, along the western property line, and in an area where the Southern California Edison pole and support are located. The limited impacted areas that remain are depicted on **Figure 5**; if any digging were to occur in these areas, appropriate measures should be taken. Approximately 12,614 cubic yards of clean soil was imported from two construction sites for backfill of the remedial excavation area on the Property. The excavation was backfilled, graded, and compacted prior to being asphalt paved for use by Petros. A total of 78 confirmation samples (S1 through S78) were collected on a grid spacing of approximately every 50 feet. Concentrations of lead in the 78 samples ranged from non-detect (less than 2.5 mg/kg) to 102 mg/kg, all well below the cleanup goal of 320 mg/kg. The DHHS issued an NFA letter dated April 27, 2015 (**Appendix E**). The presence of residual fill debris with elevated lead concentrations in certain areas of the Property is considered a CREC.

- Regulatory database information identified the Property on the HAZNET, Historical Cortese, Historical Auto Station, CDL, LUST, RCRA-SQG, FINDS, and UST databases. The Cortese, LUST and UST database listings appear to relate to the historic UST operations, removals, and cleanups. Other EDR report information indicated that wastes such as organic solids, oil-containing wastes, aqueous solutions with organic residues, asbestos containing waste, unspecified solvent mixture waste, and waste oil and mixed oil, were used on the Property. As a result of the previous investigations and/or current use of the Property, the listings of the Property on the associated databases are considered to be CRECs or HRECs.

Observations during the site inspection indicate that adjacent properties are currently occupied by numerous commercial/industrial operators. No obvious RECs for the Property were identified on these adjacent sites. However, regulatory database information also indicates that numerous sites within 0.25 miles of the Property have had releases of substances including hydrocarbons and volatile organic compounds, and groundwater in the area has been impacted. Based on this information, it is possible that impacted groundwater from these sites has migrated beneath the Property.

Conclusions

In the opinion of the Environmental Professionals, this assessment has revealed no evidence of conditions indicative of releases or threatened releases of hazardous substances other than the HRECs and CRECs as discussed above. Six NFA letters have been issued in association with the Property and one is currently pending in association with the former clarifiers. Further investigation is not recommended.

Data Gaps

The User Questionnaire was not returned to SCS. Given all the other information gathered during the course of this and previous investigations, this data gap is not considered significant.

1 INTRODUCTION

SCS Engineers (SCS) was retained by Alere Property Group, LLC (the “User”) to prepare a Phase I Environmental Site Assessment (ESA) of the San Francisco Yard located at Anaheim Street and San Francisco Avenue in Long Beach, California (the “Property”). A location map for the Property is presented as **Figure 1** in **Appendix A**. This assessment was performed in conformance with 40 CFR 312, Standards for Conducting All Appropriate Inquiries, and in general conformance with ASTM E1527-13.

2 PURPOSE

The purpose of this investigation was to identify conditions indicative of releases or threatened releases of hazardous substances as defined in CERCLA section 101, and petroleum products, on, at, in, or to the Property.

This assessment is intended to constitute appropriate inquiry into the previous ownership and uses of the property, as required to support the assertion of the innocent landowner, contiguous property owner, and/or bona fide prospective purchaser defenses to liability (collectively the landowner liability protections, or LLPs) under the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA a.k.a. Superfund), as amended by the Superfund Amendments and Reauthorization Act of 1986 (SARA) and the Small Business Liability Relief and Brownfields Revitalization Act of 2002.

If known or suspected contamination is identified, Users seeking to maintain LLPs have responsibilities in addition to completion of an AAI-compliant Phase I ESA. These “continuing obligations” include taking “appropriate care” and “reasonable steps” with respect to known or suspected releases of hazardous substances during the term of property ownership. In addition to these requirements under Federal law, there are different requirements under state law with respect to liability protections. On request, SCS Engineers can provide support for clients with continuing obligations, as appropriate.

3 SCOPE OF SERVICES

This Phase I ESA is based on:

- Interviews with past and/or present owners, operators, and/or occupants of the Property.
- Reviews of federal, tribal, state, and local government records.
- Visual inspections of the Property and adjoining properties performed on July 2, 2015.
- Review of historical Property use information (topographic maps, aerial photographs, fire insurance maps, existing reports, etc.).
- Commonly known or reasonably ascertainable information about the Property (e.g., interviews with appropriate regulatory agency personnel and review of agency files review of available documents, interviews with other knowledgeable persons).

- Degree of obviousness of the presence or likely presence of contamination at the Property, and the ability to detect the contamination by appropriate investigation.
- Information provided as a result of the additional inquiries conducted by the User.

4 SPECIAL TERMS AND CONDITIONS

This Phase I ESA for the San Francisco yard located at Anaheim Street and San Francisco Avenue in Long Beach, California has been prepared specifically for Alere Property Group, LLC. The report has been prepared in accordance with the care and skill generally exercised by reputable professionals, under similar circumstances, in this or similar localities. No other warranty, express or implied, is made as to the professional opinions presented herein.

No other party, known or unknown to SCS, is intended as a beneficiary of this work product, its content or information embedded therein. Third parties use this report at their own risk. Third party reliance letters may be issued on request to SCS subject to approval of Alere Property Group, LLC and payment to SCS of a fee for such letters.

5 LIMITATIONS AND ASSUMPTIONS

The investigation focused on releases and threatened releases of hazardous substances or petroleum products that could be considered a recognized environmental condition (REC) and/or a liability due to their possible presence in significant concentrations (e.g., above acceptable limits set by the Federal or state government) or due to the potential for contaminant migration through exposure pathways (e.g., groundwater). Materials that may contain substances which are not currently deemed hazardous by the federal or state of California EPA were not considered as part of this study.

Unless specifically included in our scope of services, formal surveys for asbestos-containing materials, lead-based paints, fire safety, vapor intrusion, indoor air quality, mold, and similar matters were not part of this assessment. The Property was not evaluated for compliance with land use, zoning, wetlands, or similar laws. This report is not intended to be an environmental compliance audit.

Hazardous substances naturally occurring in plants, soils, and rocks (e.g., heavy metals, naturally occurring asbestos, or radon) are not typically considered in these investigations. Similarly, construction debris (e.g., discarded concrete, asphalt) is not considered to be of concern unless observations suggest that hazardous substances are likely to be present in significant concentrations.

Unless otherwise noted, sampling and laboratory analyses of soil, water, air, building materials, or other media, were not performed as part of this investigation. Positive identification of hazardous substances can only be accomplished through sampling and appropriate laboratory analysis.

SCS Engineers assumes no responsibility for the accuracy of information obtained from, compiled by, or provided by third-party sources, such as regulatory agency listings. Unless obviously inaccurate or if information exists to the contrary, SCS Engineers assumes that

information collected during this environmental site assessment is accurate and correct. Unless warranted, information collected has not been independently validated as part of this assessment.

The following information is the responsibility of the User (40 CFR 312.22) and is not included in this Phase I Assessment Report:

- Specialized knowledge or experience of the User.
- The relationship of the purchase price to the fair market value of the Property. The purchaser of a Property is required to consider whether any differential between the purchase price and the fair market value of the Property is due to the presence of releases or potential releases of hazardous substances at the Property.

Certain other limitations could affect the accuracy and completeness of this report, as follows:

- Site Access Limitations – Access to the Baker Tanks storage yard was not available during the July 2, 2015 site walk, however the site was visible from the street and observations from the adjacent river path were made.
- Physical Obstructions to Observations – The Property is primarily used as storage yards by three different facilities, portions of the yards were obstructed by the storage of piping, empty tanks,
- Outstanding Information Requests – None
- Historical Data Sources Failure – None
- Other Limitations – None

6 GENERAL SITE CHARACTERISTICS

SITE LOCATION

The Property consists of 10.74 acres of outdoor storage yard and is comprised of approximately five and a half parcels in Long Beach, California. The Property was formerly part of the Long Beach Public Service Yard (the “Former Service Yard”). Four and a half of these parcels are on contiguous city blocks bounded by West Anaheim to the south, San Francisco Avenue to the east, the Long Beach Public Service Yard to the north, and the Los Angeles River Flood Control Channel to the west. These contiguous parcels also include the intervening street rights-of-way (14th, Cowles, 15th, and 16th Streets) which were incorporated into the Former Service Yard and the current various storage yards. Numerous addresses have currently or historically been associated with the Property and it is important to note that operations on this portion of the Property were sometimes included under the address of 1725 San Francisco Avenue, although this address is physically north of the Property and still occupied by the City of Long Beach Public Service Yard.

The fifth parcel is located on the northwestern quadrant of the city block bounded by Esther Street to the south, San Francisco Avenue to the east, Pacific Coast Highway to the north, and the

Los Angeles River Flood Control Channel to the west. This northernmost parcel is located approximately 700 feet north of the other parcels and has an address of 940 Pacific Coast Highway.

The assigned Los Angeles County Tax Assessor's Parcel Numbers have varied in recent years and currently are (from north to south) 7271-017-015 (the northernmost noncontiguous parcel), 7271-012-020, 7271-012-023, eastern portion of 7271-011-008, 7271-008-013, and the most southerly parcel does not currently have an associated APN according to the County Tax Assessor's website (may be due to recent or ongoing parcel change activity). In addition, APNs 7271-012-020, 7271-012-023, 7271-011-008 (eastern portion), and 7271-008-013 are currently being re-parceled. Certificate of Compliance No. 1411-08A (for APNs 7271-012-020 and 7271-012-023) and No. 1411-08C (for 7271-011-008 [eastern portion] and 7271-008-013) have been filed in official records of the Recorder's Office in Los Angeles County.

APN maps and the Certificate of Compliance showing the Property are provided as **Figure 2a and 2b** in **Appendix A**. A March 2015 aerial photograph of the Property and surrounding area is provided as **Figure 3**.

GENERAL SITE DESCRIPTION

As depicted on **Figure 3**, the Property is leased by three different facilities as follows:

The northerly noncontiguous parcel (APN 7271-017-015) is occupied by Ocean Blue Environmental Services, Inc. (Ocean Blue). This parcel is approximately 0.34 acres and is used as a surplus storage yard for Ocean Blue's trailers and materials (Ocean Blue Yard).

The northern portion of the contiguous area of the Property (APNs 7271-012-020 and 7271-012-023) is occupied by BakerCorp (Baker) as a storage yard (the "Baker Yard"). The Baker Yard is comprised of approximately 4.01 acres and is used to store their empty tanks.

The southern portion of the contiguous area of the Property (APNs 7271-011-008 [eastern portion only], 7271-008-013, and the most southerly parcel which does not currently have an associated APN) is occupied by Petros Tubular Services, Inc. (Petros) as a storage yard (the "Petros Yard"). The Petros yard is comprised of approximately 6.39 acres and is used to store pipes and fittings associated with the oil and gas industry.

The yards are mostly asphalt paved and according to the Los Angeles County Tax Assessor's parcel maps, the contiguous portion of the Property includes the intervening streets that historically ran between parcels.

ADJOINING PROPERTY USE

Adjacent properties to the noncontiguous northerly parcel (APN 7271-017-015) consist of the following:

- North – Pacific Coast Highway overpass, across which is residential property
- East – Goodwill services yard

- South – Ocean Blue Environmental Services
- West – The Los Angeles River and associated river trail, across which is industrial property

Adjacent properties to the four and a half contiguous parcels consist of the following:

- North – Long Beach Public Service Yard
- East – Commercial/Industrial properties (identified on **Figures 4a and 4b**)
- South – Anaheim Avenue overpass, across which is commercial/industrial property
- West – The Los Angeles River and associated river trail, across which is industrial property

7 PHYSICAL SETTING

PHYSIOGRAPHIC SETTING

According to the U.S. Geological Survey (USGS), Long Beach (1964, photorevised 1981), California 7.5 minute topographic map, the Property is located immediately east of the Los Angeles River at an elevation of approximately five feet above mean sea level about 1.3 miles north of San Pedro Bay. Regional topography is relatively flat with a gentle slope to the west.

GEOLOGY AND SOILS

Geologic maps indicate that surface sediments in the area are Quaternary alluvium and coastal deposits of silt, sand, and gravel that are underlain by the late Pleistocene Lakewood Formation. The Lakewood Formation, which consists of gravel, sand, sandy silt, silt and clay with shale pebbles, extends to a depth of approximately 100 feet (California DWR, Bulletin No.104). Sediments below the Lakewood Formation belong to the late Pleistocene San Pedro Formation.

GROUNDWATER

The Property is located in the southern portion of the West Coast Groundwater Basin. The first groundwater aquifer in the region is within the Gage Aquifer within the Lakewood Formation. Based on groundwater monitoring reports for a former underground storage tank (UST) site located in the 14th Street right-of-way on the Property (SCS, April 2010), first groundwater is approximately 4 to 5 feet below ground surface (bgs) and flows southeasterly in direction. Shallow groundwater has locally been impacted by saltwater intrusion; therefore, it is not used as a drinking water source. Groundwater beneath the Property may be tidally influenced due to tides in the adjacent Los Angeles River. Groundwater in the area of the former 14th Street right-of-way UST has been impacted by gasoline-related constituents.

RADON

According to the California Department of Health Service's October 2002 report *Radon Database for California* and the June 2008 update to this report, screening in the area of the Property (90813) found no locations where buildings had radon levels in excess of 4 pCi/L (the

EPA action level). The alluvial geology of the Long Beach area is not normally associated with elevated radon levels. Based on the available information, therefore, elevated radon gas is not expected in the area of the Property.

8 SITE INSPECTION

An inspection of the Property and surrounding area was conducted on July 2, 2015, by Ashley Hutchens of SCS. A sketch map and photographs of the Property are provided in **Appendix B**. A description of the three storage yards occupying the Property, from north to south, is presented in the following narrative.

Ocean Blue Yard

The most northerly parcel (APN 7271-017-015) occupies the northwesterly portion of the city block bounded by Pacific Coast Highway to the north, San Francisco Avenue to the east, Esther Street to the south, and the Los Angeles River Flood Control Channel to the west. Access to this parcel was provided by Mr. Justin Lee, Director of Ocean Blue. The area is comprised of 0.34 acres and was used to store Ocean Blue's tractor trailers, bins, booms, etc. used for cleanup at their jobsites. No permanent structures were present on the Property. The parcel was asphalt paved and fenced with the exception of the southern boundary which continues into the remainder of the Ocean Blue yard (not a part of the Property).

Baker Yard

The Baker Yard consists of the northern portion of the contiguous area of the Property (APNs 7271-012-020 and 7271-012-023) and is comprised of approximately 4.01 acres. The Baker Yard was not accessible for inspection during the July 2, 2015 site walk and was therefore observed from the perimeter. Three structures were observed on the Property and the remaining areas are used for storage. Baker stores various types of mobile tanks which are then transported to various jobsites as needed. Storm drains and associated concrete channels were observed across the yard.

Petros Yard

The Petros Yard consists of the southern portion of the contiguous area of the Property (APNs 7271-011-008 [eastern portion only], 7271-008-013, and the most southerly parcel which does not currently have an associated APN). Access to this area was provided by Mr. Servando Ruiz, Supervisor for Petros. The Petros Yard is comprised of approximately 6.39 acres and is used to store oil and gas pipes and associated fittings. The fittings are stored in a caged area located on the east side of the southerly parcel. Petros has recently taken over the northern portion of their yard consisting of APNs 7271-008-013 and eastern portion of 7271-011-008.

A curb and storm drain were observed on the western side of the southerly parcel which appear to be remnants of De Forest Avenue. Several other storm drains were observed across the Petros Yard.

Two 55-gallon drums of diesel fuel were observed an open shed in the cage area on the south parcel. The drums are stored on secondary containment and a spill kit was observed adjacent to the drums. Concrete forms with an oily film were observed on the western portion of the south

parcel. Mr. Ruiz indicated they use diesel to “grease” the forms prior to pouring the concrete into the forms. The diesel is also used for the forklifts used in the Petros Yard.

HAZARDOUS SUBSTANCES

During the site inspection the only hazardous substance observed was the diesel fuel in the Petros Yard, as described above. Mr. Ruiz indicated the drums, located on secondary containment, are replenished every few weeks.

NATURAL DRAINAGE

Natural waterways are not currently located on the Property. The Los Angeles River Flood Control Channel is located immediately west of the Property. Numerous storm drains were observed on the Property. Runoff from the Property drains to these storm drains and to the surrounding streets.

DISTURBED AREAS

No obvious disturbed areas were observed during the site inspection.

ELEVATORS AND OTHER HYDRAULIC EQUIPMENT

No elevators or other hydraulic equipment were observed on the Property.

WELLS

No wells were observed on the Property. Groundwater wells were previously located on the Property in association with a former UST as discussed in a later section of this report.

ELECTRICAL EQUIPMENT

A new pad-mounted electrical transformer was observed at the northeast corner of APN 7271-008-013 of the Petros Yard. SCE has stated that they have never specified the purchase of distribution transformers utilizing PCBs as the insulating/cooling fluid. SCE transformers utilize mineral oil exclusively. In a statistically valid test of over 20,000 SCE distribution transformers, SCE determined that the concentrations of PCBs in the mineral oils was less than 50 parts per million (ppm) in over 96 percent of the units.

WASTEWATER

Domestic sanitary sewage generated on the Property, if any, would be discharged to the city sewer system.

DRINKING WATER

Drinking water is supplied to the Property by the City of Long Beach. All large public water suppliers in California have been required to test their water and comply with federal and state drinking water standards since the mid-1980s. Consequently, lead and other contaminants of concern are not expected to be present in the drinking water supply above applicable primary and secondary drinking water standards.

STORAGE TANKS

Other than the numerous empty above-ground storage tanks at the Baker Yard, no above ground or underground storage tanks that were in-use were observed on the Property. Former USTs were located on the Property as discussed in a later section of this report.

VISUAL INSPECTION OF ADJOINING SITES

Businesses observed on adjoining sites during the site inspection included: Harbor Custom Canvas, L.W. Hydraulic Services LLC, The Food Bank of Southern California (and associated parking lot), Gulf Marine and Industrial Supplies Inc., Ready Storage, BCIA Precision Casting, Graybar Distributor of Electrical and Comm/Data Products, Long Beach Seafood Co., L&L Towing and Impound Alley, Goodwill (and associated parking lots), and Ocean Blue Environmental Services.

No obvious RECs were observed on any of the adjacent properties, however three aboveground fuel storage tanks were observed at the adjacent Ocean Blue facility. In addition, Ocean Blue conducts auto maintenance operations of their vehicles and stores containerized hazardous materials from various job sites on a trailer for a maximum of 10 days.

9 INTERVIEWS

Ocean Blue Yard

During the site inspection on July 2, 2015, Mr. Justin Lee, Director of Ocean Blue, indicated that they use the Property for storage primarily of boom adsorbent materials, empty storage bins, and tanker trucks. Mr. Lee indicated that hazardous materials are not stored on the Property with the exception of an occasional tanker truck that comes from a job site in the middle of the night and the contents are held in the tanker until the next day when they can be taken to an appropriate facility for disposal. Mr. Lee indicated that Ocean Blue has not received any violations and has not had any spills. The occasional temporary storage of hazardous wastes in the tanker trucks is considered to be a *de minimis condition*.

Baker Yard

The Baker Yard was not accessible for inspection during the July 2, 2015 site walk. However, this portion of the Property was inspected from the perimeter and Baker was contacted by phone for an interview. Ms. Tanya Pratt, Corporate Real Estate Manager for Baker, answered questions regarding the Baker Yard by phone on July 10, 2015. Mr. Pratt indicated that Baker has leased

the Property since February 2012 and leases only the yard for storage of their tanks, they do not use the structures on the Property. The tanks are empty when stored on the Property and after use on various job-sites the contents are emptied and tanks cleaned prior to their return to the Property.

Petros Yard

During the site inspection on July 2, 2015, Mr. Servando Ruiz, Supervisor for Petros indicated they have occupied the southern portion of their current yard for approximately three years. Petros recently expanded to the northern portion of the Property in late 2014.

10 SITE HISTORY

Site history was evaluated from the following sources:

- Historic U.S. Geological Survey (USGS) topographic maps provided by Environmental Data Resources (EDR) (June 17, 2015).
- Historical aerial photographs dating from 1923, 1928, 1947, 1953, 1963, 1972, 1987, 1989, 1994, 2002, 2005, 2009, 2010, and 2012 provided by Environmental Data Resources (EDR) (June 18, 2015).
- City of Long Beach Department of Building and Safety building permit information. Sanborn Fire Insurance maps from the years 1949, 1950, and 1963 obtained from the EDR-Sanborn collection (October 4, 2010 and June 19, 2015).
- City Directory review report provided by EDR (June 17, 2015).

Copies of Sanborn maps, aerial photographs, city directories, topographic maps are included in **Appendix C**.

APN/Address	Year	Description	Source
Undetermined	1925	Two buildings are depicted on the southern half of the contiguous portion of the Property	Topo Map

HISTORICAL USE SUMMARY

Historical information indicates that portions of the Property were developed for commercial use as early as 1926, and have been used for commercial or industrial purposes since that time. Superior Laundry was identified in only the 1926 city directory at 1317 San Francisco Avenue. A gas station was identified in the city directories at 949 West Anaheim Street from at least 1931 to 1935. Confirmed street addresses for this portion of the Property are known to be 901-935 West Anaheim Street, however it is possible that the 949 address was part of the Property. A lumber company occupied the southerly parcel from 1939 through the early 1980s, when records indicate that a portion of the Property was redeveloped with the City of Long Beach Tow Yard. Two USTs were removed from the Property under a permit with the address of 1725 San Francisco Avenue; however these USTs are known to be formerly located at 1445 San Francisco Avenue (APN 7271-008-013). The removal and status of these USTs is further discussed below.

The majority of the contiguous portion of the Property has been predominately occupied by numerous divisions of the City of Long Beach since at least 1929 through 2013 with operations including: sewer maintenance, street maintenance, chemistry lab, towing operations, and public service. The non-contiguous northerly parcel (APN 7271-017-015 at 940 Pacific Coast Highway) was occupied by a motel from 1939 to 1990, and appears to have been used for materials storage (sand, gravel, equipment, parking, etc.) until recently.

It is possible that the “laundry” facility identified on the Property in 1926 at 1317 San Francisco Avenue also conducted dry cleaning operations. However, any dry cleaning operation in the 1920s would very likely have used a petroleum-based solvent (gasoline or Stoddard), and dry cleaning operations using petroleum products were, in SCS’s experience, unlikely to have resulted in any significant environmental impact to the parcels they occupy. In addition, a previous soil vapor survey (discussed below) did not identify any significant concentrations of solvents. In summary, the presence of a “laundry” or possible dry cleaning operation in 1926 does not represent an environmental concern for the Property.

A gas station was identified at 949 West Anaheim Street from 1931 to 1935. As indicated above, this address is not a known historical address of the Property; however it is possible that it was

historically part of the Property. The possible presence of a former gas station on the Property was previously investigated, as discussed in a later section of this report, and constitutes a historical recognized environmental condition (HREC).

HISTORICAL USE OF ADJOINING SITES

Surrounding properties were predominately commercial/industrial and included the following:

North – Pacific Coast Highway, across which included: an auto court and dwellings occupied the area to the north across Pacific Coast Highway. The area was residential by 1963.

East – San Francisco Avenue, across which included: truck parking, vacant lots, Adhor Milk Farms, truck services, liquor market, an office, plumbing supplies, a food facility, a meat refrigeration site, a machine shop, and tourist court units.

South – West Anaheim Street, across which included: a plumbing supply company in 1950 and electric appliance warehouse in 1963.

West – The Los Angeles River Flood Control Channel.

11 COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

In order to identify commonly known or reasonably ascertainable information about the Property, SCS reviewed previous environmental reports and various regulatory agency files and interviewed regulatory agency personnel. The following information was identified.

PREVIOUS ENVIRONMENTAL REPORTS

The following reports have been prepared and/or reviewed by SCS:

- SCS Engineers, February 22, 2005. *Phase I Environmental Assessment, Long Beach Public Service Yard, San Francisco Avenue – 7 APNs, Long Beach, California*, (File No. 01204007.01)
- SCS Engineers, August 2, 2005. *Phase II Site Investigation Report, Long Beach Public Service Yard, 1601 San Francisco Avenue, Long Beach, California*, (File No. 01204007.02)
- SCS Engineers, October 17, 2005. *Groundwater Investigation Report, Former Long Beach City Tow Yard, 901 West Anaheim Street, Long Beach, California*, (File No. 01204007.02)
- SCS Engineers, April 17, 2006. *First Quarter 2006 Groundwater Monitoring, 901 West Anaheim, Long Beach, California*, (File No. 01204007.02).

- SCS Engineers, February 2013. *Clarifier Removal Report, Former Long Beach Public Service Yard, 1725 San Francisco Avenue, Long Beach, California, 90813* (File No. 01212361.00).
- SCS Engineers, May 9, 2013. *Draft Summary of Site Characterization Activities and Analytical Data Letter, Former Long Beach Public Service Yard, 1725 San Francisco Avenue, Long Beach, California* (File No 01212361.00).
- SCS Engineers, (March 2012) Revised May 2014. *Revised Remedial Action Plan, Former Long Beach Public Service Yard (APNs 7271-011-008 and 7271-008-013), Long Beach, California* (File No. 01210161.09).
- SCS Engineers, October 6, 2014. *Letter Re: Submittal of Proposed CAP detail and Schedule, Former Long Beach Public Service Yard (APNs 7271-011-008 and 7271-008-013), Long Beach, California* (File No. 01210161.10).

- SCS Engineers, March 23, 2015. *Site Remediation and Closure Report, “Yard Parcel” of the Former Long Beach Public Service Yard (APNs a portion of 7271-011-008 and 7271-008-013, Long Beach, California (File No. 01210161.10).*

The Phase I and Phase II conducted by SCS in 2004/2005 included a portion of the Long Beach Public Service Yard (physically located at 1725 San Francisco Avenue, the city block between Esther and 17th Streets and the northern half of the city block between 17th and 16th Streets) that is not included as part of this assessment and therefore are not discussed below. However, it should be noted that the address of 1725 San Francisco Avenue has been used for operations (i.e. UST removal and potentially other waste disposal) throughout the service yard, including portions of the Property covered by this assessment. In addition, please note that the APNs associated with the Property have changed over the years.

Copies of previous reports are included on CD in **Appendix D**.

Summary of Previous Investigations

In 2005, SCS conducted a Phase I ESA of 7 parcels utilized for various operations performed by Long Beach Public Services (e.g. traffic management, street maintenance, and landscaping). At the time of this investigation the Property was still occupied (with the exception of the northerly and southerly parcels [previous APNs 7271-017-900 (currently APN 7271-017-015) and 7271-007-903 (no current APN assigned)] and interviews with staff were conducted. In 2010, SCS conducted a Phase I ESA of five and a half of the above parcels. The previous Phase I ESAs concluded the following:

- The Property was previously utilized for various operations performed by Long Beach public service departments (e.g. traffic management, street maintenance, and landscaping). The Property was occupied by numerous buildings and storage sheds. A carwash, two clarifiers, paint spray booth, chemical cabinet and former fueling station were also observed on the Property. Numerous potential environmental concerns were identified on the southern portion of the Property (excluding the noncontiguous northern parcel), including fill material containing debris from the 1933 earthquake and petroleum-related impacts to soil and/or groundwater from underground fuel storage tanks. Further, historic operations on these parcels have included vehicle and equipment maintenance, painting shop, chemical laboratory, landscaping departments, machine shop, etc. The locations and nature of these operations appears to be transitory, and it is possible that waste oils, various pesticides, oils, paint and solvents were spilled or leaked over the 70 plus years of operation. (Note, historical features have since been removed and these areas have been investigated and are further discussed elsewhere in this report).
- A previous Phase II investigation (SCS, August 2, 2005), was conducted to address the concerns in the 2005 Phase I ESA, and consisted of collection and analysis of 30 soil vapor samples to assess for the presence of volatile organic compounds (VOCs) and drilling 26 exploratory borings to depths ranging from one to ten feet bgs. Soil samples were collected and selectively analyzed for total petroleum hydrocarbons, heavy metals, organochlorine pesticides, and/or VOCs. The Phase II report concluded the following:

- No significant concentrations of petroleum hydrocarbons (above Soil Screening Levels) were detected in soils. Only trace concentrations of 1,1,1-TCA (2.6 µg/l in one of 30 samples) and PCE (up to 5.9 µg/l in 3 of 30 samples) were sporadically detected in soil vapor samples. In 2005, based on experience with similar sites, SCS concluded that concentrations of VOCs in this range were generally not of concern to regulatory agencies.
- Soil gas samples in the area of the carwash clarifier and paint clarifier did not contain detectable concentrations of VOCs. However, a soil sample from this area at five feet bgs contained elevated concentrations of metals, including arsenic, chromium, copper, lead, nickel and zinc. The source of the metals in soil is unknown; they may be related to historic operations in this area, or to fill soils (the area is topographically elevated with respect to the area to the east). In addition, elevated concentrations of lead were identified in several other samples from suspected fill areas. Soils may contain metals at concentrations that may be a potential risk to human health, or require special consideration (i.e., additional testing and characterization) prior to removal and/or disposal. Additional investigation and remediation for metals was recommended prior to any redevelopment of this area of the Property.

Based on the results of previous investigations and continued site operations with a potential for chemical releases, the two remaining clarifiers and paint spray booth were considered recognized environmental conditions (RECs). Based on the results of the previous SCS Phase II investigation in 2005, the previously identified hazardous materials storage areas, previous use of solvents, and former fueling station were considered historical recognized environmental conditions (HRECs). There were apparently no significant changes in service yard operations between the 2005 and 2010 Phase I ESAs (with the exception of their reduction or cessation), therefore, no significant changes in changes in the nature or extent of contamination were anticipated.

- Interviews conducted with City of Long Beach staff during the 2005 Phase I ESA revealed that fill material was likely placed on the western portion of the Property; the source of this material is unknown, but may include debris from the 1933 earthquake. An obvious elevated area was noted on the northwestern portion of parcel 7271-011-900 (between 15th and Cowles Streets). (Note, this area has since been investigated and/or removed and is further discussed below).
- Historical information indicates that portions of the Property were initially developed for commercial use as early as 1926, and have been used for commercial or industrial purposes since that time. Historical information identified that two previous occupants of the Property as Superior Laundry at 1317 San Francisco Avenue in 1926, and a gas station at 949 West Anaheim from at least 1931 through 1935.

It is possible that the laundry operations could have included dry cleaning. However, based on SCS's experience, any dry cleaning operation in the 1920s would very likely have used a petroleum-based solvent (gasoline or Stoddard), and dry cleaning operations using petroleum products were unlikely to have resulted in any significant environmental impact to the parcels they occupy. As discussed elsewhere in this report, a soil vapor

survey did not identify any significant concentrations of solvents. In summary, in SCS's opinion, the presence of a "laundry" or possible dry cleaning operation in 1926 does not represent a REC for the Property. The address of the historical gas station at 949 West Anaheim Street is not a confirmed address on the Property; however it may nevertheless have been located on the southern-most parcel, APN 7271-007-903. Historic aerial photographs show a building on the southeastern corner of this parcel in 1928. This possible historic gas station was considered a REC. (Note, this area has since been investigated and/or removed and is further discussed below).

- Historical information identifies four known USTs historically located on the Property as follows: (1) a 1,000-gallon unused UST; (2) 550-gallon gasoline UST; and (3) two 12,000-gallon USTs (one diesel, one gasoline) as part of a former fueling station. The current known status of these USTs are as follows:
 - (1) A 1,000-gallon unused UST was located on the western portion of the 16th Street right-of-way just south of APN 7271-012-905 (currently APN 7271-012-020; **Figure 4a**). This UST was originally meant to contain solvent/kerosene, was installed on July 19, 1988, and removed in January 1999. Regulatory closure was received from the Joint Powers Agency (currently the Long Beach Department of Health and Human Services [DHHS]) in the "No Further Action" Letter dated March 25, 1999 (**Appendix E**), which also provided closure for three (3) other USTs associated with the Long Beach Public Works Yard at 1725 San Francisco, but not associated with the Property.
 - (2) A 550-gallon gasoline UST was located in the 14th Street right-of-way just north of APN 7271-007-903 (**Figure 4b**). A "UST Unauthorized Release (Leak)/Contamination Site Report" dated May 29, 1996 indicated that on August 30, 1995 it was discovered that an unknown quantity of gasoline leaked from a 30 plus year old UST at 901 West Anaheim Street. This UST was removed by Maness Environmental on August 30, 1995.

SCS installed three groundwater wells in July 2005 and five groundwater monitoring events have been conducted since. Groundwater flow direction has been to the southeast with groundwater most recently encountered in February 2010 (SCS, April 2010) at depths between 3.90 and 4.98 feet bgs. Groundwater samples have contained concentrations of total petroleum hydrocarbons (TPH) as gasoline (up to 1.84 milligrams per liter [mg/L]), benzene (up to 45.8 micrograms per liter [µg/L]), toluene (up to 2.8 µg/L) ethylbenzene (up to 58.7 µg/L), xylenes (up to 9.4 µg/L), and MTBE (up to 3.9 µg/L). SCS concluded that concentrations of fuel-related constituents in groundwater have remained relatively stable between 2005 and 2010. Based on this information, SCS concluded that further investigation or monitoring was not warranted and that the data support closure for groundwater.

However, historical information indicates that residual hydrocarbon concentrations in soil are above generally-accepted cleanup goals and that remediation of soils is therefore warranted. SCS recommended that soil remediation be conducted with proposed future development, so that remediation goals would be consistent with future use.

The RWQCB issued a letter on November 2, 2010 requiring semi-annual groundwater monitoring to verify concentrations remain low. The RWQCB also indicated that a

Remedial Action Plan for soil remediation be submitted along with a schedule, or that a soil vapor survey be conducted to assess the human health risks to determine if the case can be closed with the current residual soil impacts. (Upon further review, the RWQCB issued an NFA letter, as further described below).

- (3) Two 12,000-gallon USTs were located at the northeast corner of APN 7271-008-901 (currently APN 7271-008-013) at 1445 San Francisco Avenue (**Figure 4b**). Long Beach DHHS files revealed an Underground Storage Tank Removal Report, dated August 7, 2008 for the removal of two 12,000-gallon USTs (one gasoline and one diesel). The tanks, installed November 1998 were removed on July 2, 2008. The USTs were reportedly in good condition upon removal, however, approximately two feet of groundwater filled into the UST excavation upon removal and free product diesel was observed floating on the groundwater in the southwest corner of the excavation. The fuel was reportedly leaked into the pea-gravel backfill surrounding the USTs during the excavation of one of the dispenser pans. Mitigation methods included using absorbent pads to skim the free product and a vacuum truck to remove approximately 5,000 gallons of groundwater. Analysis of soil samples collected from beneath each end of the USTs (at 16 feet bgs) and beneath each dispenser (at 6 feet bgs) indicated that no detectable concentrations of TPH or VOCs were present.

As a result of the impact to groundwater observed during removal, the DHHS referred the case to the RWQCB in an email dated October 10, 2008. In the email, the DHHS asked the RWQCB if a “no further action” letter should be issued. The RWQCB opened a case (T0603701971) and issued a letter dated November 24, 2008 requesting additional information. At the time of the Phase I ESAs a “no further action” letter had not been issued and SCS recommended following up with the RWQCB to obtain the “no further action” letter. (An NFA letter has since been issued as further described below).

- Regulatory database information identified the Property on the HAZNET, Historical Auto Station, Historical Cortese, CDL (clandestine drug lab) LUST, RCRA-SQG, FINDS, SWF/LF, EMI, and UST databases. The Cortese, LUST and UST database listings appear to relate to the historic UST operations, removals, and cleanups. Other EDR report information indicated that wastes such as organic solids, oil-containing wastes, aqueous solutions with organic residues, asbestos containing waste, unspecified solvent mixture waste, and waste oil and mixed oil, were used on the Property. Additionally, the database report indicated that a historical gas station (949 W. Anaheim St.), transfer station operation, and illegal drug lab formerly existed on the Property.
- Observations during the site inspection indicate that adjacent properties are currently occupied by numerous commercial/industrial operators. No obvious RECs for the Property were identified on these adjacent sites. However, regulatory database information also indicates that numerous sites within 0.25 miles of the Property have had releases of substances including hydrocarbons and volatile organic compounds, and groundwater in the area has been impacted. Based on this information, it is possible that impacted groundwater from these sites has migrated beneath the Property.

Since the completion of the previous Phase I ESA in 2010, the following series of events described in the above listed reports, have occurred resulting in NFA letters:

- The RWQCB further reviewed the City Tow Yard groundwater information and issued an NFA letter for the 550-gallon UST at the 14th Street right-of-way dated July 6, 2011 (**Appendix E**). The associated groundwater monitoring wells were subsequently abandoned on July 22, 2011 as summarized in the SCS, August 9, 2011 letter. Because the RWQCB closed the case allowing residual contamination to remain in place this former UST is considered a controlled recognized environmental condition (CREC). The RWQCB did not make any restrictions regarding the UST, however appropriate measures should be taken if digging is to occur in the area.
- As a result of SCS's follow-up regarding the two 12,000-gallon USTs removed in 2008, the RWQCB issued an NFA letter dated July 3, 2012. These two former USTs constitute an HREC with regards to the Property.
- A Phase II Investigation (conducted in November 2010) and geophysical survey (conducted in July 2012) were performed on the southern portion of former APN 7172-007-903 (no current APN assigned) for the historical gas station located at 949 W. Anaheim, which is not a confirmed address of the Property, but was potentially located in this area. The November 2010 and July 2012 investigations of the southern portion of the Property found no obvious signs of former USTs or associated fuel-impacts indicative of a release associated with former USTs. As a result, the potential of a former service station at 949 W. Anaheim is considered to be an HREC.
- In April 2012, SCS inspected two suspect wells identified at 1601 San Francisco Avenue. The inspection, summarized in SCS' letter dated July 18, 2012, determined the wells to be 6-inch steel casings (the use of which was unknown), however they were determined not to be groundwater wells and therefore the well boxes and steel casings are determined to be *de minimus conditions*.
- Since the bulk of the fill soil (presumed 1933 earthquake debris) was anticipated on two parcels in the center of the contiguous portion of the Property (APNs 7271-011-008 and 7271-008-013) a Remedial Action Plan (SCS, March 2012, Revised May 2014) was prepared for this area. Very little fill soil existed on northerly and southerly portion of the contiguous portion of the Property (APNs 7271-012-023 and 7271-007-005) and in order to expedite obtaining "no further action" letters for these parcels in anticipation of their eminent lease, a separate investigation under DHHS oversight was conducted. The results of this investigation (SCS, March 2, 2012) concluded that no evidence of significant impacts from lead or other metals associated with fill soil was identified. The DHHS subsequently issued NFA letters for these parcels dated July 11, 2012 (**Appendix E**). Therefore, the presence of fill soils on these two parcels is considered to be an HREC.
- APNs 7271-011-008 and 7271-008-013 that held the bulk of the suspected earthquake debris were remediated between August 2014 and February 2015. Because of the volumes of lead-impacted debris on these parcels, negotiations between the owner San Francisco Yard LLC (the "SFY") and City of Long Beach (the "City") were conducted to evaluate remedial alternatives for the Property. The remedial solution proposed and approved in the Remedial Action Plan was to move the impacted soil from the southern

and eastern portions of the Property and place them in a capped area on the northwesterly portion of the Property that the City would, in turn, purchase from SFY creating two “operable units,” as follows:

- **Yard Parcel** – This operable unit, owned by SFY, is an L-shaped, approximately 3.5 acre parcel that includes the southern portion of the Property as well as a strip of land fronting San Francisco Avenue. Remediation of the Yard Parcel was proposed to meet cleanup goals, with a goal of receiving an NFA letter from the DHHS.
- **Long Beach Parcel** – This operable unit is a rectangular-shaped parcel, approximately 1.8 acres in area, occupying the western two-thirds of APN 7271-011-008. This operable unit was used to stockpile the metals-impacted fill material, has been covered with two layers of a proposed 3 layer cap (third layer to consist of 1.5 feet of dirt to be placed in the future), and will be subject to a deed restriction as a condition of receiving an NFA letter. This parcel is being purchased from SFY by the City and is not part of the Property subject to this Phase I ESA.

As part of the remedial excavation activities of the Yard Parcel, approximately 44,000 cubic yards of impacted material was excavated from the Yard Parcel and placed on the Long Beach Parcel (not a part of the Property). Because debris extended beyond the Property boundaries, the impacted material was excavated to the extent possible without extending past the Property boundaries (i.e. into the river path). Therefore, impacted material will remain below the surface (and unexposed) in several other areas of the Property including: potentially beneath the building that remains on the Yard Parcel Property, along the western property line, and in an area where the Southern California Edison pole and support are located. The limited impacted areas that remain are depicted on **Figure 5**. Approximately 12,614 cubic yards of clean soil was imported from two construction sites for backfill of the remedial excavation area on the Yard Parcel. The excavation was backfilled, graded, and compacted prior to being asphalt paved for use by Petros. A total of 78 confirmation samples (S1 through S78) were collected on a grid spacing of approximately every 50 feet. Concentrations of lead in the 78 samples ranged from non-detect (less than 2.5 mg/kg) to 102 mg/kg, all well below the cleanup goal of 320 mg/kg. The DHHS issued an NFA letter dated April 27, 2015 (**Appendix E**). The presence of residual fill debris in certain areas of the Property is considered a CREC.

- In January 2013, clarifiers associated with former car wash (located within the fill area) and paint rinse areas were removed. Clarifier abandonment activities were conducted with oversight provided by Long Beach Fire Department and described in SCS’s report, *Clarifier Removal Report, Former Long Beach Public Service Yard* dated February 2013. Approval of the clarifier closure was pending the remediation and an NFA has been requested from the DHHS. The clarifiers are considered to be an HREC, however, it is recommended that the follow-up with the DHHS be conducted until the NFA letter is issued.

As previously indicated, copies of all associated reports are included on CD in **Appendix D**. Copies of NFA letters are included in **Appendix E**.

REGULATORY AGENCY RECORDS

Local regulatory agencies and other sources were contacted in an effort to identify any known or suspected contamination sites or incidents of hazardous waste storage or disposal which might have resulted in soil or groundwater contamination within a one-mile radius of the Property. Within the City of Long Beach, the Long Beach Fire Department generally acts as the lead enforcement agency for UST compliance. If soil or groundwater contamination is suspected, the Long Beach Department of Health and Human Services (DHHS) generally acts as the lead enforcement agency for subsequent investigations. However, if groundwater has been affected, the RWQCB generally becomes the lead agency for contamination characterization and cleanup.

Files have previously been reviewed as part of the previous Phase I ESAs as discussed above. In addition, anything in the files since that time has been generated by SCS and is also previously discussed.

12 REVIEW OF FEDERAL, STATE, TRIBAL, AND LOCAL GOVERNMENT DATABASES

A database search for sites listed on various federal, state, tribal, and local databases in the area around the Property was obtained from EDR (June 17, 2015). A description of each of the databases searched is included in the report, which is attached as **Appendix F**. Among the databases included in the EDR report are NPL (federal, tribal, and state-equivalent), proposed and delisted NPL, CORRACTS (RCRA facilities subject to corrective actions), hazardous waste sites identified for investigation or remediation (CERCLIS, State CERCLIS, VCP, Brownfields Calsites, etc.), LUST, sites with engineering controls, former CERCLIS (NFRAP), RCRA and state hazardous waste generators, ERNS, SWLF, USTs, and Toxic Pits.

Review of these records satisfies all requirements as set forth in 40 CFR Section 312.26 (b) and (c) with regard to the review of federal, tribal, and state government records of databases of such government records and local government records and databases of such records pertaining to both the subject property and the nearby or adjoining properties. Further, the search distances for each particular database are as specified in 40 CFR 312.26 and ASTM E1527-13.

Any known or suspected contaminated sites included on these lists within 0.25 miles of the Property are discussed in the following text. As a general rule, sites beyond 0.25 miles are not anticipated to impact a site significantly. Any sites beyond 0.25 miles with a high potential to impact the Property are also discussed. (Please note: the distances and directions listed in this report have been field verified and might not always match those in the EDR report.)

Sites such as TSD facilities, hazardous waste generators, HAZNET, FINDS, SQGs, LQGs, USTs, HIST UST, RCRA violations, and TRIS facilities with toxic chemical releases (generally in accordance with permitting requirements - into the air, water, or land as reported under SARA Title III) use or store hazardous materials and thus may pose a potential problem in the event of a spill or leak. However, unless these sites also appear in an agency list of contaminated sites,

there is no evidence of any problems at this time. Therefore, sites on these lists will not be discussed unless on or in close proximity to the Property.

Please refer to **Appendix F** for further information on these sites.

PROPERTY LISTINGS

The Property is variously identified in the EDR database report as the Vehicle Tow Yard, Long Beach City Tow Yard, City of Long Beach Towing Operations, Public Service Yard, City of Long Beach Public Works, City of Long Beach Public Service Department, City of Long Beach Public Service Yard, City of Long Beach Testing Lab, and City of Long Beach; with addresses of 901 and 929 West Anaheim and 1475, 1601 and 1725 San Francisco Avenue. In addition, 949 West Anaheim is identified below, however it is not a confirmed address of the Property.

The Property is identified on the HAZNET, Historical Cortese, Historical Auto Station, CDL, LUST, RCRA-SQG, FINDS, and UST databases as follows:

Listing	Address	Owner	Comments
A1 Hist Auto Station	949 W. Anaheim St. (This is not a confirmed address of the Property, however it may have been located on the southern-most parcel).	Sifton, A.D.	Gasoline and oil service station reported for 1931 and 1935. Because this area has been investigated, as previously discussed, this historical auto station is considered an HREC.
A10 Hist Cortese	901 Anaheim	Vehicle Tow Yard	No information on the nature of the listing, however, the Cortese list consists predominantly leaking UST sites. See below.

Listing	Address	Owner	Comments
A6/A8/A11 LUST	901 W. Anaheim St.	Vehicle Tow Yard/ Long Beach City Tow Yard	This site is listed as a Leaking UST (LUST) case (Global ID T0603701960) at this address on the Property. The UST was found after the City of Long Beach purchased the land. A gasoline release was discovered during tank removal in August 1995. This information corresponds to the 550-gallon UST previously discussed. The case status is listed as completed-case closed. As previously discussed, an NFA letter is provided in Appendix E and due to residual contamination remaining in place, this former UST is considered a CREC.
A3/A12 HAZNET,CDL	901 West Anaheim	City of Long Beach Towing Operations	<u>HAZNET</u> This listing is related to the removal of the following wastes: organic solids, oil-containing waste, and aqueous solution with organic residues. <u>CDL</u> This listing indicates and illegal drug lab was operated or drug lab equipment/materials stored or found in a vehicle. Any structures where this lab may have been present are no longer on the Property.
A5 UST	929 West Anaheim (This address corresponds to the same parcel as 901 Anaheim and is likely related)	City of Long Beach	<u>UST</u> No information on the UST given.

Listing	Address	Owner	Comments
A13 RCRIS-SQG, FINDS	1475 San Francisco	City of Long Beach Testing Lab	Operations at this location generated small quantities of hazardous waste. No related violations were identified.
A9 RCRIS-SQG, FINDS	1601 San Francisco	City of Long Beach Public Service Department	Operations at this location generated small quantities of hazardous waste. No related violations were identified.
A7 Hist Cortese, LUST	1725 San Francisco (physically not part of the Property, however LUST case #1 refers to the USTs removed from APN 7271-008- 013 [1445 San Francisco Ave] as previously discussed. It is not likely that the motor oil case (LUST 2) is associated with the Property)	Public Service Yard	<u>LUST 1</u> Diesel affected soil only. Case is listed as completed-case closed by the RWQCB (Global ID T0603701971). As previously discussed, an NFA letter is provided in Appendix E and these former USTs are considered HRECs. <u>LUST 2</u> Leak of motor oil discovered 8/4/95 after piping failure. Case is listed as preliminary site assessment underway. No closure reported. This case does not appear to be associated with the Property.
A2 UST	1725 San Francisco (physically not part of the Property)	City of Long Beach Public Service Yard	<u>UST</u> Dual walled UST listed for this address. This UST does not appear to be located on part of the Property.

All of the Historical Cortese, UST, and LUST database listings appear to relate to USTs that have been previously discussed in this report and are considered HRECs.

The HAZNET database indicated that various types of materials have been removed under manifest at 901 West Anaheim and 1601 San Francisco Avenue. These wastes were likely the result of the various vehicle maintenance operations, construction activities, painting operations, UST removals, etc. that have taken place on the Property during years of operation by the City of Long Beach.

The RCRA-SQG database, which is a list of sites that generate, transport, store, treat and/or dispose of small quantities of hazardous waste, did not provide any information pertaining to the nature of the materials generated on the Property; however, the entries indicated that no violations were found.

The FINDS database, which lists other databases that a site is included in, indicated that the Property is listed on the National Emissions Inventory and the Resource Conservation and Recovery Act Information System databases. This listing is likely due to historic operations such as the paint booth, fuel station, etc.

ADJACENT SITE LISTINGS

The solid waste information system database (SWF/LF) identifies the Public Service Transfer Station #1 facility as located on the east side of 710 HWY-between Anaheim ST./P.C.H.

The SWF/LF listing is related to the limited-volume transfer station operations for green materials. Available information in the EDR database report indicated the owner is the City of Long Beach Public Service Bureau with an address of 1601 San Francisco Avenue (former address of this department). The SWIS number is 19-AA-1047, and available information from the SWIS database indicates this facility is across the LA River. It should be noted that a previous SWF/LF listing was identified during the previous Phase I ESAs for a facility at 1601 San Francisco and was related to the limited-volume transfer station operations; green materials, mixed municipal wastes, etc. If either of these listings were associated with the Property, they are considered a *de minimus condition* since no waste material was permanently stored at this facility.

The adjacent Food Bank site at 1444 San Francisco is listed as a LUST site Global ID T0603701935, the site was closed in 1996 by the RWQCB. In addition, several other listings for facilities adjacent to the Property were noted for the UST, Hist Auto Station, RCRQ-SQG, PADs, and FINDs databases. None of these facilities were observed to have associated leaks or violations.

OTHER DATABASE SITES

The EDR report provides a summary table of regulatory database sites within specified distances of the Property, including: 1. standard environmental records, 2. additional environmental records, and 3. high risk historical records. This summary table is provided beginning on page 4 of the EDR report (**Appendix F**) and a summary of which is provided below for the sites within a one-mile radius of the Property. Some sites may be listed on more than one database and some sites may be listed more than once within the same database.

Database	Number of Sites (NR = Not Reported)		
	0 – 1/4 miles	1/4 – 1/2 miles	1/2 - 1 mile
US EPA National Priority List (NPL)	0	0	0

Database	Number of Sites (NR = Not Reported)		
	0 – 1/4 miles	1/4 – 1/2 miles	1/2 - 1 mile
US EPA CERCLIS (sites under review for inclusion of the NPL)	1	0	NR
US EPA RCRA Corrective Actions (CORRACTS)	0	0	1
US EPA Hazardous Waste Generators	19	NR	NR
California Superfund (SPL)	0	0	0
California equivalent CERCLIS (EnviroStor)	1	1	13
California Leaking Underground Storage Tanks (LUST)	12	24	NR
California Solid Waste & Landfill Facilities (SWLF)	1	0	NR
California Registered Underground Storage Tanks (UST)	58	NR	NR
California State Spills List (SLIC)	7	5	NR

According to the EDR database, numerous sites within 0.25 miles of the Property have had releases of substances including hydrocarbons and volatile organic compounds, and groundwater in the area has been impacted. Based on this information, it is possible that impacted groundwater from these sites has migrated beneath the Property.

Unmappable or Orphan Sites

A total of 26 unmappable sites were identified in the EDR Report. Unmappable sites cannot be plotted by EDR due to inaccurate or incomplete addresses. Based on review of the provided data, including the estimated locations of the unmappable sites in relation to the Property, it appears unlikely that the unmappable sites have adversely affected the environmental condition of the Property.

LANDFILLS

A review of the Major Waste Systems Map (June 1972, revised August 1976) was conducted to locate any landfills or transfer stations within a one-mile radius of the Property. No landfills or transfer stations were observed to be within 0.5 mile of the Property according to the Major Waste Systems Map.

According to the Solid Waste Information System database provided by EDR, one active transfer station (Public Service Transfer Station #1) is located near the Property (page 99 of EDR report 02881976.2r). According to EDR, this facility is located east of the 710 Freeway between Anaheim Street and Pacific Coast Highway. However, the available information indicates the City of Long Beach Department of Public Works operates this facility and the address is 1601 San Francisco Avenue. This is likely the same listing discussed above, which is related to the limited volume transfer operation that accepts green materials (e.g., yard wastes, plant cuttings, etc.)

OIL AND GAS WELLS

Available oil and gas well maps from the California Department of Conservation, Division of Oil, Gas and Geothermal Resources (DOGGR) were reviewed to identify oil and gas wells on the Property or in the nearby area. According to the Digital Online Mapping System (DOMS 2.1), the Property is located within the Wilmington Oil Field, however now wells are in the general vicinity of the Property. Numerous oil wells are present approximately 300 feet northwest and southwest of the Property across the Los Angeles River Flood Control Channel. Since these wells are on the opposite side of the river, no significant environmental impact to the Property is anticipated from oil and gas exploration or production.

NATIONAL PIPELINE MAPPING SYSTEM (NPMS)

SCS reviewed the NPMS website (<https://www.npms.phmsa.dot.gov/PublicViewer/>) for the Property and surrounding area to identify any hazardous materials pipelines. The NPMS is a geographic information system (GIS) created by the U.S. Department of Transportation, Pipeline and Hazardous Materials Safety Administration (PHMSA), and Office of Pipeline Safety (OPS) in cooperation with other federal and state governmental agencies and the pipeline industry. The NPMS consists of geospatial data, attribute data, public contact information, and metadata pertaining to the interstate and intrastate hazardous liquid trunklines and hazardous liquid low-stress lines as well as gas transmission pipelines, liquefied natural gas (LNG) plants, and hazardous liquid breakout tanks (tanks that receive and store liquids transported by pipeline) jurisdictional to PHMSA. The nominal accuracy of geospatial data in the NPMS is +/-500 feet. The NPMS does not contain information on interconnects, pump and compressor stations, valves, direction of flow, capacity, throughput, or operating pressure. In addition, distribution and gathering pipelines are not included in the NPMS.

The NPMS is built from data submitted by pipeline, LNG plant, and breakout tank facility operators. Since 2002, transmission pipeline and LNG plant facility operators are required to submit mapping information to the NPMS and to update their submissions annually. Breakout tank operators are able to submit data to the NPMS on a voluntary basis.

Based on review of the NPMS website, the closest hazardous materials pipelines are across the Los Angeles River Channel approximately 700 feet to the west of the Property.

13 USER PROVIDED INFORMATION

A User Questionnaire was not returned to SCS for inclusion in the report. Alere Property Group, LLC provided no information beyond what is discussed above.

TITLE RECORDS

No title report was provided to SCS for review.

ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS

No information regarding environmental liens or activity and use limitations was provided to SCS. No environmental liens or activity/use limitations were identified by SCS during the course of this assessment.

SPECIALIZED KNOWLEDGE

No specialized knowledge regarding the Property was provided to SCS by the User.

VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

No property valuation information was provided to SCS.

14 DEGREE OF OBVIOUSNESS OF THE PRESENCE/LIKELY PRESENCE OF CONTAMINATION ON THE PROPERTY

The Property was previously utilized for various operations performed by Long Beach public service departments (e.g. traffic management, street maintenance, and landscaping). Numerous potential environmental concerns were identified on the southern portion of the Property (excluding the noncontiguous northern parcel), including fill material containing debris from the 1933 earthquake and petroleum-related impacts to soil and/or groundwater from underground fuel storage tanks. Further, historic operations on these parcels have included vehicle and equipment maintenance, painting shop, chemical laboratory, landscaping departments, machine shop, etc. The locations and nature of these operations appeared to be transitory and it was possible that waste oils, various pesticides, oils, paint and solvents were spilled or leaked over the 70 plus years of operation.

However, since the initial Phase I ESA in 2005, numerous phases of investigation and remediation have been conducted including a site-wide Phase II investigation of soil and soil vapor, groundwater investigations, UST and clarifier removals, a limited Phase II investigation and geophysical survey for a potential former service station, a confirmation sampling report for two parcels with limited fill debris and remediation and closure report for two parcels with the bulk of the fill debris. As a result of these activities, six NFA letters have been issued in association with the Property and the previous RECs identified during the 2005 and 2010 Phase I ESAs are considered HRECs or CRECs, as further discussed in Section 16 of this report.

1.5 DATA GAPS

A data gap represents an inability on the part of the environmental professional to obtain information required by the standards and practices of 40 CFR 312 to fully identify conditions indicative of releases or threatened releases of hazardous substances on, at, in, or to the Property.

The following data gaps were identified:

- The User Questionnaire was not returned to SCS. Given all the other information gathered during the course of this and previous investigations, this data gap is not considered significant.

1.6 FINDINGS AND OPINIONS

Based on the scope of work performed, SCS finds the following:

- The Property consists of 10.74 acres of outdoor storage yard and is comprised of approximately five and a half parcels in Long Beach, California formerly associated with the Former Long Beach Public Service Yard (the “Former Service Yard”). Four and a half of these parcels are on contiguous city blocks and also include the intervening street rights-of-way (14th, Cowles, 15th, and 16th Streets) which were incorporated into the Former Service Yard and the current various storage yards. Numerous addresses have currently or historically been associated with the Property and it is important to note that operations on this portion of the Property were sometimes included under the address of 1725 San Francisco Avenue, although this address is physically north of the Property and still occupied by the City of Long Beach Public Service Yard.

The northernmost parcel (940 Pacific Coast Highway, is located on the north side of the adjacent city block, approximately 700 feet north of the other parcels.

- The assigned Los Angeles County Tax Assessor’s Parcel Numbers have varied in recent years and currently are (from north to south) 7271-017-015 (the northernmost noncontiguous parcel), 7271-012-020, 7271-012-023, eastern portion of 7271-011-008, 7271-008-013, and the most southerly parcel does not currently have an associated APN (may be due to recent or ongoing parcel change activity). In addition, APNs 7271-012-020, 7271-012-023, 7271-011-008 (eastern portion), and 7271-008-013 are currently being re-parceled. Certificate of Compliance No. 1411-08A (for APNs 7271-012-020 and 7271-012-023) and No. 1411-08C (for 7271-011-008 [eastern portion] and 7271-008-013) have been filed in official records of the Recorder’s Office in Los Angeles County.
- The Property is currently occupied by three storage yards as follows (**Figure 3**): (1) The northerly noncontiguous parcel (APN 7271-017-015) is occupied by Ocean Blue Environmental Services, Inc. This parcel is approximately 0.34 acres and is used as a surplus storage yard for Ocean Blue’s trailers and materials. (2) The northern portion of the contiguous area of the Property (APNs 7271-012-020 and 7271-012-023) is occupied by BakerCorp as a storage yard (the “Baker Yard”). The Baker Yard is

comprised of approximately 4.01 acres and is used to store their empty tanks. (3) The southern portion of the contiguous area of the Property (APNs 7271-011-008 [eastern portion only], 7271-008-013, and the most southerly parcel, which does not currently have an associated APN, is occupied by Petros Tubular Services, Inc. (Petros) as a storage yard (the “Petros Yard”). The Petros yard is comprised of approximately 6.39 acres and is used to store pipes and fittings associated with the oil and gas industry.

- Prior to use as the above-mentioned storage yards, the Property was predominantly used by the City of Long Beach for various operations performed by Long Beach public service departments (e.g. traffic management, street maintenance, and landscaping). SCS previously conducted a Phase I Assessment (SCS, February 22, 2005) for the City of Long Beach, the findings of which (detailed in Section 11 of this report) concluded that numerous RECs were identified on the southern portion of the Property (excluding the noncontiguous northern parcel), including a carwash, two clarifiers, paint spray booth, chemical cabinet, former fueling station, fill material containing debris from the 1933 earthquake and petroleum-related impacts to soil and/or groundwater from underground fuel storage tanks. Further, historic operations on these parcels have included vehicle and equipment maintenance, painting shop, chemical laboratory, landscaping departments, machine shop, etc. The locations and nature of these operations appeared to be transitory, and it was determined possible that waste oils, various pesticides, oils, paint and solvents were spilled or leaked over the 70 plus years of operation.

However, since the initial Phase I ESA in 2005, numerous phases of investigation and remediation have been conducted to investigate the previously identified recognized environmental conditions (RECs), the statuses of which can be summarized as follows:

- A previous Phase II investigation (SCS, August 2, 2005), was conducted to address concerns identified in the 2005 Phase I ESA. Based on the results of this investigation, the previously identified hazardous materials storage areas, previous use of solvents, and former fueling station were considered historical recognized environmental conditions (HRECs).
- A 1,000-gallon unused UST was located on the western portion of the 16th Street right-of-way just south of APN 7271-012-020 (**Figure 4a**). This UST was originally meant to contain solvent/kerosene, was installed on July 19, 1988, and removed in January 1999. Regulatory closure was received from the Joint Powers Agency (currently the Long Beach Department of Health and Human Services [DHHS]) in the “No Further Action (NFA)” Letter dated March 25, 1999 (**Appendix E**), which also provided closure for three (3) other USTs associated with the Long Beach Public Works Yard at 1725 San Francisco (not associated with the Property).
- A 550-gallon gasoline UST was located in the 14th Street right-of-way just north of APN 7271-007-903 (**Figure 4b**). The UST was removed on August 30, 1995. A groundwater investigation and subsequent monitoring events were conducted. The RWQCB issued an NFA letter for the 550-gallon UST at the 14th Street right-

of-way dated July 6, 2011 (**Appendix E**). The associated groundwater monitoring wells were subsequently abandoned on July 22, 2011. Because the RWQCB closed the case allowing residual contamination to remain in place, this former UST is considered a controlled recognized environmental condition (CREC). The RWQCB did not make any restrictions regarding the UST; however appropriate measures should be taken if digging is to occur in the area.

- Two 12,000-gallon USTs were located at the northeast corner of APN 7271-008-013 at 1445 San Francisco Avenue (**Figure 4b**). The tanks (one gasoline and one diesel), installed November 1998 were removed on July 2, 2008. As a result of SCS's follow-up regarding the two 12,000-gallon USTs removed in 2008, the RWQCB issued an NFA letter dated July 3, 2012. These two former USTs constitute an HREC with regards to the Property.
- A Phase II Investigation (conducted in November 2010) and geophysical survey (conducted in July 2012) were performed on the southern portion of former APN 7172-007-903 (no current APN assigned; **Figure 4b**) for the historical gas station located at 949 W. Anaheim, which is not a confirmed address of the Property, but was potentially located in this area. The November 2010 and July 2012 investigations of the southern portion of the Property found no obvious signs of former USTs or associated fuel-impacts indicative of a release associated with former USTs. As a result, the potential of a former service station at 949 W. Anaheim is considered to be an HREC.
- In April 2012, SCS inspected two suspect wells identified at 1601 San Francisco Avenue. The inspection, summarized in SCS' letter dated July 18, 2012, determined the wells to be 6-inch steel casings (the use of which was unknown), however they were determined not to be groundwater wells and therefore the well boxes and steel casings are determined to be a *de minimus condition*.
- Since the bulk of the fill soil (presumed 1933 earthquake debris) was anticipated on two parcels in the center of the contiguous portion of the Property (APNs 7271-011-008 and 7271-008-013) a Remedial Action Plan (SCS, March 2012, Revised May 2014) was prepared for this area. Very little fill soil existed on northerly and southerly portion of the contiguous portion of the Property (APN 7271-012-023 and previously identified APN 7271-007-005) and in order to expedite obtaining "no further action" letters for these parcels in anticipation of their eminent lease, a separate investigation under DHHS oversight was conducted. The results of this investigation (SCS, March 2, 2012) concluded that no evidence of significant impacts from lead or other metals associated with fill soil was identified. The DHHS subsequently issued NFA letters for these parcels dated July 11, 2012 (**Appendix E**). Therefore, the presence of fill soils on these two parcels is considered to be an HREC.
- In January 2013, clarifiers associated with former car wash (located within the fill area) and paint rinse areas were removed. Clarifier abandonment activities were conducted with oversight provided by Long Beach Fire Department and described in SCS's report, *Clarifier Removal Report, Former Long Beach Public Service*

Yard dated February 2013. Approval of the clarifier closure was pending the remediation and an NFA has been requested from the DHHS. The clarifiers are considered to be an HREC, however, it is recommended that the follow-up with the DHHS be conducted until the NFA letter is issued.

- APNs 7271-011-008 and 7271-008-013, which held the bulk of the suspected earthquake debris, were remediated between August 2014 and February 2015. As part of the remedial excavation activities approximately 44,000 cubic yards of impacted material was excavated from the Property and placed on an area adjacent to the Property (western two-thirds of APN 7271-011-008) known as “the Long Beach Parcel” (which is being re-purchased and will be maintained by the City of Long Beach) and is not a part of the Property.

Because debris extended beyond the Property boundaries, the impacted material was excavated to the extent possible without extending past the Property boundaries (i.e. into the river path). Therefore, impacted material will remain below the surface (and unexposed) in several other areas of the Property including: potentially beneath the building that remains on the Property, along the western property line, and in an area where the Southern California Edison pole and support are located. The limited impacted areas that remain are depicted on **Figure 5**; if any digging were to occur in these areas, appropriate measures should be taken. Approximately 12,614 cubic yards of clean soil was imported from two construction sites for backfill of the remedial excavation area on the Property. The excavation was backfilled, graded, and compacted prior to being asphalt paved for use by Petros. A total of 78 confirmation samples (S1 through S78) were collected on a grid spacing of approximately every 50 feet. Concentrations of lead in the 78 samples ranged from non-detect (less than 2.5 mg/kg) to 102 mg/kg, all well below the cleanup goal of 320 mg/kg. The DHHS issued an NFA letter dated April 27, 2015 (**Appendix E**). The presence of residual fill debris with elevated lead concentrations in certain areas of the Property is considered a CREC.

- Regulatory database information identified the Property on the HAZNET, Historical Cortese, Historical Auto Station, CDL, LUST, RCRA-SQG, FINDS, and UST databases. The Cortese, LUST and UST database listings appear to relate to the historic UST operations, removals, and cleanups. Other EDR report information indicated that wastes such as organic solids, oil-containing wastes, aqueous solutions with organic residues, asbestos containing waste, unspecified solvent mixture waste, and waste oil and mixed oil, were used on the Property. As a result of the previous investigations and/or current use of the Property, the listings of the Property on the associated databases are considered to be CRECs or HRECs.
- Observations during the site inspection indicate that adjacent properties are currently occupied by numerous commercial/industrial operators. No obvious RECs for the Property were identified on these adjacent sites. However, regulatory database information also indicates that numerous sites within 0.25 miles of the Property have had releases of substances including hydrocarbons and volatile organic compounds, and groundwater in the area has been impacted. Based on this information, it is

possible that impacted groundwater from these sites has migrated beneath the Property.

In summary, SCS has performed a Phase I Environmental Site Assessment of the Former Long Beach Public Service Yard consisting of five and a half parcels located at Anaheim Street and San Francisco Avenue, in Long Beach, California, in conformance with the scope and limitations of 40 CFR 312 and ASTM E1527-13. Any exceptions to, or deletions from, this practice are described in Section 5 of this report.

In the opinion of the Environmental Professionals, this assessment has revealed no evidence of conditions indicative of releases or threatened releases of hazardous substances other than the HRECs and CRECs as discussed above. Six NFA letters have been issued in association with the Property and one is currently pending in association with the former clarifiers. Further investigation is not recommended.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by SCS Engineers were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

EDR Historical Topographic Map Report

Environmental Data Resources, Inc.s (EDR) Historical Topographic Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topographic Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the early 1900s.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

April 27, 2015

Mr. Clark Neuhoff
San Francisco Yard LLC
c/o Alere Property Group LLC
100 Bayview Circle, Suite 310
Newport Beach, CA 92660

Subject: Letter of Compliance-No Further Action

Regarding: 1401 San Francisco Avenue, Long Beach, CA 90813 (the "Property")
Los Angeles County Recorded Application No. #1411-08C/APN:
7271-008-013 and a portion of 727-011-008

Dear Mr. Neuhoff:

This letter confirms the completion of site remedial action related to the lead-impacted soil located at the Property. The Property consists of an L-shaped parcel, approximately 3.5 acres in are (APN: 7271-008-013 and a portion of 7271-011-008).

The lead-impacted soil that was fully characterized between 2013 and 2015, was likely associated with fill debris from the 1933 Long Beach earthquake. The exact date of deposition is unknown. Lead was the only contaminant of concern at the Property and it has now been removed from the site.

The remedial action consisted of excavating approximately 44,000 cubic yards of lead-impacted soil and relocating it to the adjacent City of Long Beach owned parcel, Los Angeles County Recorded Application No.: #1411-08B. This parcel has been designated as the Area of Contamination (AOC) as per California Department of Toxic Substances Control's (DTSC) "Proven Technologies and Remedies (PT&R) Guidance, Remediation of Metals in Soils", dated August 29, 2008.

Remediation is complete per the *Site Remediation and Closure Report, "Yard Parcel"* of the *Former Long Beach Public Service Yard*, prepared by SCS Engineers, March 23, 2015. The Long Beach Department of Health and Human Services has no further requirement, action or restriction related to the Property at this time.

Please note that this correspondence does not exempt San Francisco Yard LLC of any liability under the California Health and Safety Code or Water Code for past, present or future operations at the site address. Also, subject to the *Environmental Indemnity and Access Agreement* dated June 3, 2010, ownership maintains responsibility to correct any additional or previously unidentified conditions, which cause, or may thereafter cause pollution or nuisance, or otherwise pose a threat to water quality or public health.

A.P.N. (s) listed above are subject to change as per Los Angeles County Assessor's Office decision.

If you require additional information regarding this matter, you may contact Hazardous Materials Specialist, Carmen Piro at 562-570-4137.

Sincerely,

A handwritten signature in black ink, appearing to read 'N. Kerr', with a stylized flourish at the end.

Regarding: 1725 San Francisco Avenue, Long Beach
(Parcel 7271-007-005/Southern Parcel)

Dear Mr. Neuhoff:

This letter confirms the completion of a site investigation related to the characterization of the soil at the former Long Beach City Public Service Yard, located at the above referenced location.

This letter specifically addresses the above referenced parcel and does not extend to other sections at the property.

Based on the Confirmation Sampling Report prepared by SCS Engineers, dated March 2, 2012, and with the provision that the information provided to this Agency was accurate and representative of site conditions, no further action is required.

Please note that this correspondence does not exempt you of any liability under the California Health and Safety Code or Water Code for past, present or future operations at the site address. Additionally, you maintain responsibility to correct any additional or previously unidentified conditions, which cause, or may thereafter cause, pollution or nuisance, or otherwise pose a threat to water quality or public health.

If you require additional information regarding this matter, you may contact Hazardous Materials Specialist, Carmen Piro at 562/570-4137

**UNDERGROUND STORAGE TANKS PROGRAM – CASE CLOSURE
PUBLIC SERVICE YARD (PRIORITY D-1 SITE)
1725 SAN FRANCISCO AVENUE, SITE 43, LONG BEACH (FILE NO. 908130607)**

Dear Ms. Piro:

This letter confirms the completion of a site investigation and corrective action for the underground storage tanks formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tanks are greatly appreciated.

Based on information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground tank(s) site is in compliance with the requirements of subdivision (a) and (b) of Section 25296.10 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.3 of the Health and Safety Code and that no further action related to the petroleum release(s) at the site is required.

This notice is issued pursuant to subdivision (g) of Section 25296.10 of the Health and Safety Code.

Claims for reimbursement of corrective action costs submitted to the Underground Storage Tank Cleanup Fund more than 365 days after the date of this letter or issuance or activation of the Fund's Letter of Commitment, whichever occurs later, will not be reimbursed unless one of the following exceptions applies:

- Claims are submitted pursuant to Section 25299.57, subdivision (k) (reopened UST case); or
- Submission within the timeframe was beyond the claimant's reasonable control, ongoing work is required for closure that will result in the submission of claims beyond that time period, or that under the circumstances of the case, it would be unreasonable or inequitable to impose the 365-day time period.

Ms. Carmen Piro

**Underground Storage Tanks Program – Case Closure
Former Long Beach City Tow Yard
901 Anaheim Street West, Long Beach (Case No. 908130498) (Priority D-1 Site)**

Dear Mr. Neely:

This letter confirms the completion of a site investigation and corrective action for the underground storage tank(s) formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tank(s) are greatly appreciated.

Based on information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground tank(s) site is in compliance with the requirements of subdivision (a) and (b) of Section 25296.10 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.3 of the Health and Safety Code and that no further action related to the petroleum release(s) at the site is required.

This notice is issued pursuant to subdivision (g) of Section 25296.10 of the Health and Safety Code.

If you have groundwater monitoring wells at the subject site, you must comply with the following:

1. All wells must be properly located and abandoned.
2. Well abandonment permits and all other necessary permits must be obtained from the appropriate agencies prior to the start of work.
3. You must submit a report on the abandonment of the wells to this office by **October 30, 2011**. This report must include, at a minimum, a site map, a description of the well abandonment process, and copies of all signed permits.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 10/25/2013 has revealed that there is 1 CERCLIS site within approximately 0.5 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
LONG BEACH COLD STOR	625 WEST ANAHEIM STR	ESE 1/8 - 1/4 (0.180 mi.)	S106	122

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there are 7 CERC-NFRAP sites within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/10/2015 has revealed that there are 5 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/10/2015 has revealed that there are 14 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 05/04/2015 has revealed that there are 15 CA ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

CA SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the CA SWF/LF list, as provided by EDR, and dated 05/18/2015 has revealed that there is 1 CA SWF/LF site within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

CA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the CA UST list, as provided by EDR, and dated 03/13/2015 has revealed that there are 58 CA UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/10/2015 has revealed that there are 10 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

CA DRYCLEANERS: A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial; garment pressing and cleaners' agents; linen supply; coin-operated laundries and cleaning; drycleaning plants except rugs; carpet and upholster cleaning; industrial launderers; laundry and garment services.

A review of the CA DRYCLEANERS list, as provided by EDR, and dated 02/18/2015 has revealed that there is 1 CA DRYCLEANERS site within approximately 0.25 miles of the target property.

SUN HARDWARE CO, INC EPA Id: CAL000115673	635 W 15TH ST	ENE 1/8 - 1/4 (0.190 mi.)	U109	123

CA HWT: A listing of hazardous waste transporters. In California, unless specifically exempted, it is unlawful for any person to transport hazardous wastes unless the person holds a valid registration issued by DTSC. A hazardous waste transporter registration is valid for one year and is assigned a unique registration number.

A review of the CA HWT list, as provided by EDR, and dated 04/13/2015 has revealed that there is 1 CA HWT site within approximately 0.25 miles of the target property.

CA MWMP: The Medical Waste Management Program (MWMP) ensures the proper handling and disposal of medical waste by permitting and inspecting medical waste Offsite Treatment Facilities (PDF) and Transfer Stations (PDF) throughout the state. MWMP also oversees all Medical Waste Transporters.

A review of the CA MWMP list, as provided by EDR, and dated 01/16/2015 has revealed that there is 1 CA MWMP site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
EDISON/LONG BEACH MG	LG BEACH AREA, 8TH I	WSW 1/2 - 1 (0.890 mi.)	AR225	481

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 32 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: Yes
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Facility Has Received Notices of Violations:

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Regional Board

Aquifer used for drinking water supply, Indoor Air, Soil, Soil Vapor
Tetrachloroethylene (PCE), Trichloroethylene (TCE), Vinyl chloride
The property is currently vacant The property is occupied by two
buildings. Historically, the main laundry facility was located on the
west and the auxiliary building was on the east. The area between the
two buildings is covered by asphalt pavement. Adjacent to the main
building on the west, there is a sump. The past operations and uses
of the sump are unknown. Three underground storage tanks (USTs) and
one above-ground storage tank (AST) were present at the site prior to
ARAMARK's purchase in 1986. USTs included a 6,000-gallon diesel, a
550-gallon gasoline, and a Stoddard solvent UST of unknown size. The
AST contained tetrachloroethylene (PCE) and had a capacity of 1,000
gallons. In 1982, the diesel and gasoline USTs and PCE AST were
removed. Later, the Stoddard solvent UST was filled with concrete and
pea gravel and abandoned in-place. The exact date of the Stoddard
solvent UST abandonment is unknown but occurred prior to 1986.
Several soil and groundwater investigations have been conducted at
the site since 1987. Soil and groundwater have been impacted with
chlorinated volatile organic compounds, petroleum hydrocarbons,
benzene, toluene, ethylbenzene and xylenes (BTEX). Highest historical
soil concentrations include 28,000 micrograms per kilogram (%g/kg) of
PCE, 1,200 %g/kg of cis-1,2-dichloroethylene (c-1,2-DCE), 2,300 %g/kg
of benzene, and 12,000 %g/kg of total petroleum hydrocarbons. Initial
groundwater investigations in 1988 detected concentrations of
benzene, trans-1,2-DCE, and PCE up to 1,600, 7,240, and 8,350
micrograms per liter (%g/L), respectively. A groundwater pump and
treat system operated at the site from 1994 to 2002, pumping
groundwater through a shallow tray air stripper and two granular
activated carbon units prior to discharge at the storm drain, under
the National Pollutant Discharge Elimination System (NPDES) permit
No. CA0063045. Groundwater monitoring has been conducted since 1987.
In general, concentrations of chlorinated volatile organic compounds
in groundwater have decreased due to the operation of remediation
system, except for vinyl chloride. Maximum groundwater concentrations
in the second quarter of 2008 include PCE at 450 %g/L, TCE at 120
%g/L, , cis-1,2-DCE at 59 %g/L, vinyl chloride at 600 %g/L, benzene
at 33 %g/L, and chlorobenzene at 47 %g/L . There are currently 7
groundwater monitoring wells on the property. Four groundwater
monitoring wells are scattered around the property, across Orange
