5. (21-0899) Recommendation to request a future presentation on potential development of anaerobic digestion at SERRF and future plans for the site.	Whitney Amaya	whitney.amaya@gmail.com						Hello my name is Whitney Amaya. I'm a resident of District 7 and a member/staff of East Yard Communities for Environmental Justice. There are various polluting industries near or in my neighborhood including SERRF so I'm glad to see this committee is looking towards a different use for the site. However, I hope this committee can look at other options beyond anaerobic digestion. The end product of anaerobic digestion is biogas/natural gas which means that at some point it will be burned, whether for transportation fuel or something else, and contribute to emissions that will impact our communities & climate. I hope that the committee can explore other options that includes but is not limited to aerobic composting, resource recovery parks, reuse centers, or a center for hard to recycle materials which would put our city on a path to zero waste. Thank you so much for the consideration.	8/31/2021
