There is no presentation on file at this time. Couple of questions, please:

- 1) Does the Airport have accurate measurements of the total GHG emissions pollution drop due to COVID-19?
- 2) Does the City of Long Beach have a plan to convert the Gulfstream property to clean-energy manufacturing - particularly those that are necessary parts of diversifying and on-shoring supply chains and value streams for CA state transportation electrification goals?
- 3) Apart from parking lots and baggage claim areas, how does LGB plan to showcase clean-energy development in one of the highest emitting sectors of Transportation? On which types of Land Use?
- 4) What role does the Sustainable City Commission have in recommending or adopting targets or programs from the Airport, or this Advisory Commission?
- 5) Given the enormous burden Holiday travel - and thus spread of the novel coronavirus - could place on Hospital capacity and performance throughout the country, what steps is LGB taking ?
