PROJECT DATA

Project Title

507 Pacific Avenue

Lead Agency Name and Address

City of Long Beach
333 W. Ocean Boulevard, 5th Floor
Long Beach, CA 90802

Contact Person and Phone Number

Anita Juhola-Garcia, Planner IV
(562) 570-6469

Project Location

507 Pacific Avenue
Assessor Parcel Number 7280003012
City of Long Beach, County of Los Angeles, California.

Project Sponsor's Name and Contact Information

Anastasi Development Company
511 Torrance Boulevard, #200
Redondo Beach, CA 90277

Preparation of this Compliance Checklist

City of Long Beach Staff

Anita Juhola-Garcia
Planner IV
(562) 570-6469

Required Project Approvals and Public Agencies Whose Approval is Required

The proposed project would require the following discretionary entitlement approvals by the approval body indicated in parentheses:

- Site Plan Review (Planning Commission)
- Vesting Tentative Tract Map (Planning Commission)

Incorporation by Reference

This Environmental Compliance Checklist may reference all or portions of another document that is a matter of public record or is generally available to the public. Informational details from the documents that have been incorporated by reference are summarized below. These documents include:

- Downtown Plan (PD-30) (January 2012)
- Downtown Plan Environmental Impact Report (December 2010) (State Clearinghouse No. 2009071006) and subsequent addenda, including the Mitigation Monitoring and Reporting Program (MMRP).
- Shade and Shadow Report prepared by Morris Design Architects (Attached as Appendix A)
- Historic Eligibility Determination prepared by Katie Rispoli Keaotamai, August 2017 (Attached as Appendix B)

- Phase I Environmental Site Assessment prepared by EXCEL Environmental and General Engineering dated March 21, 2016 (Attached as Appendix C)
- Traffic Impact Analysis for 5th and Pacific Apartments Located at 507 Pacific Avenue prepared by Linscott, Law & Greenspan, Engineers. dated October 5, 2018 (Attached as Appendix D)

PROJECT INFORMATION, SETTING, AND CEQA HISTORY

General Plan

The proposed mixed-use project at 507 Pacific Avenue (Project) is located in the Land Use District (LUD) No. 7 – Mixed Uses District of the City of Long Beach General Plan. LUD No. 7 allows a blending of uses to create a synergistic effect—in this case, residential and neighborhood-serving commercial. LUD No. 7 intends for land use controls and design and development standards to be contained in a planned development district ordinance or specific plan; in this case, said standards are part of the Downtown Plan (PD-30).

Zoning

The project is located within the Downtown Plan (PD-30), a planned development plan for the downtown area. PD-30 allows dense multi-family residential and mixed-use commercial at the subject site.

Project Description

The proposed project at 507 Pacific Avenue consists of a seven-story mixed-use building containing 157 dwelling units, 9,000 square feet of commercial space and an integrated two-level, 209-stall parking garage on a 1.05-acre site.

A variety of one-, two- and three-bedroom unit plans are provided. A total of 209 parking stalls are provided in an integrated two-level parking garage. Overall building height is 79 feet with an additional elevator penthouse element located at the corner of 5th Street and Pacific Avenue at 85 feet. The Project contains two courtyard areas on the third floor, and a roof top deck with outdoor seating and landscaping measuring 9,176 square-feet meeting the common outdoor open space standard. As proposed, all of the Project's 157 units feature either a private patio or balcony.

Surrounding Land Uses and Setting

The Project site is located on the west side of Pacific Avenue on the southwest corner of Pacific Avenue and 5th Street. Abutting the site to the west is a north-south alley, Park Court, and abutting the site to the north are three two-story, multi-family buildings. Currently, the site is a vacant. The principal local network of streets serving the project site include 7th Street, 6th Street, 5th Street, 4th Street, Magnolia and Pacific Avenues, and Long Beach Boulevard. The Metro Blue Line (operated by the Los Angeles County Metropolitan Transportation Authority), a regional light rail line connecting Long Beach to downtown Los Angeles, has a stop on Pacific Avenue south of the Project site. The Metro Blue Line runs with weekday headway times of approximately 12 minutes between trains.

Figure 5. Downtown Plan Land Use Map. p. 12.

History of CEQA Review for Downtown Plan

In December 2010, the City prepared a Draft Program Environmental Impact Report (PEIR) for the Downtown Plan (State Clearinghouse No. 2009071006), and circulated the PEIR for public review. In November 2011, a Final PEIR was prepared and certified by the City Council. The City

was the public agency which had the principal responsibility for carrying out or approving the Downtown Plan, and as such was the "Lead Agency" under the California Environmental Quality Act (CEQA) (*State CEQA Guidelines*, Section 15367).

This document is a compliance checklist to evaluate the environmental impacts associated with Application No. 1606-06 (SPR18-052,TPM18-011), located at 507 Pacific Avenue, to construct a seven-story mixed-use building containing 157 dwelling units, 9,000 square feet of commercial space, and an integrated two-level, 209-stall parking garage (the "Project"), located in the Downtown Plan (PD-30).

Assumptions included in the Downtown Plan PEIR for the Project Site

The Project is located in the 80-foot height area of the Downtown Plan (PD-30). This height area allows for a project floor area ratio of 4.0.

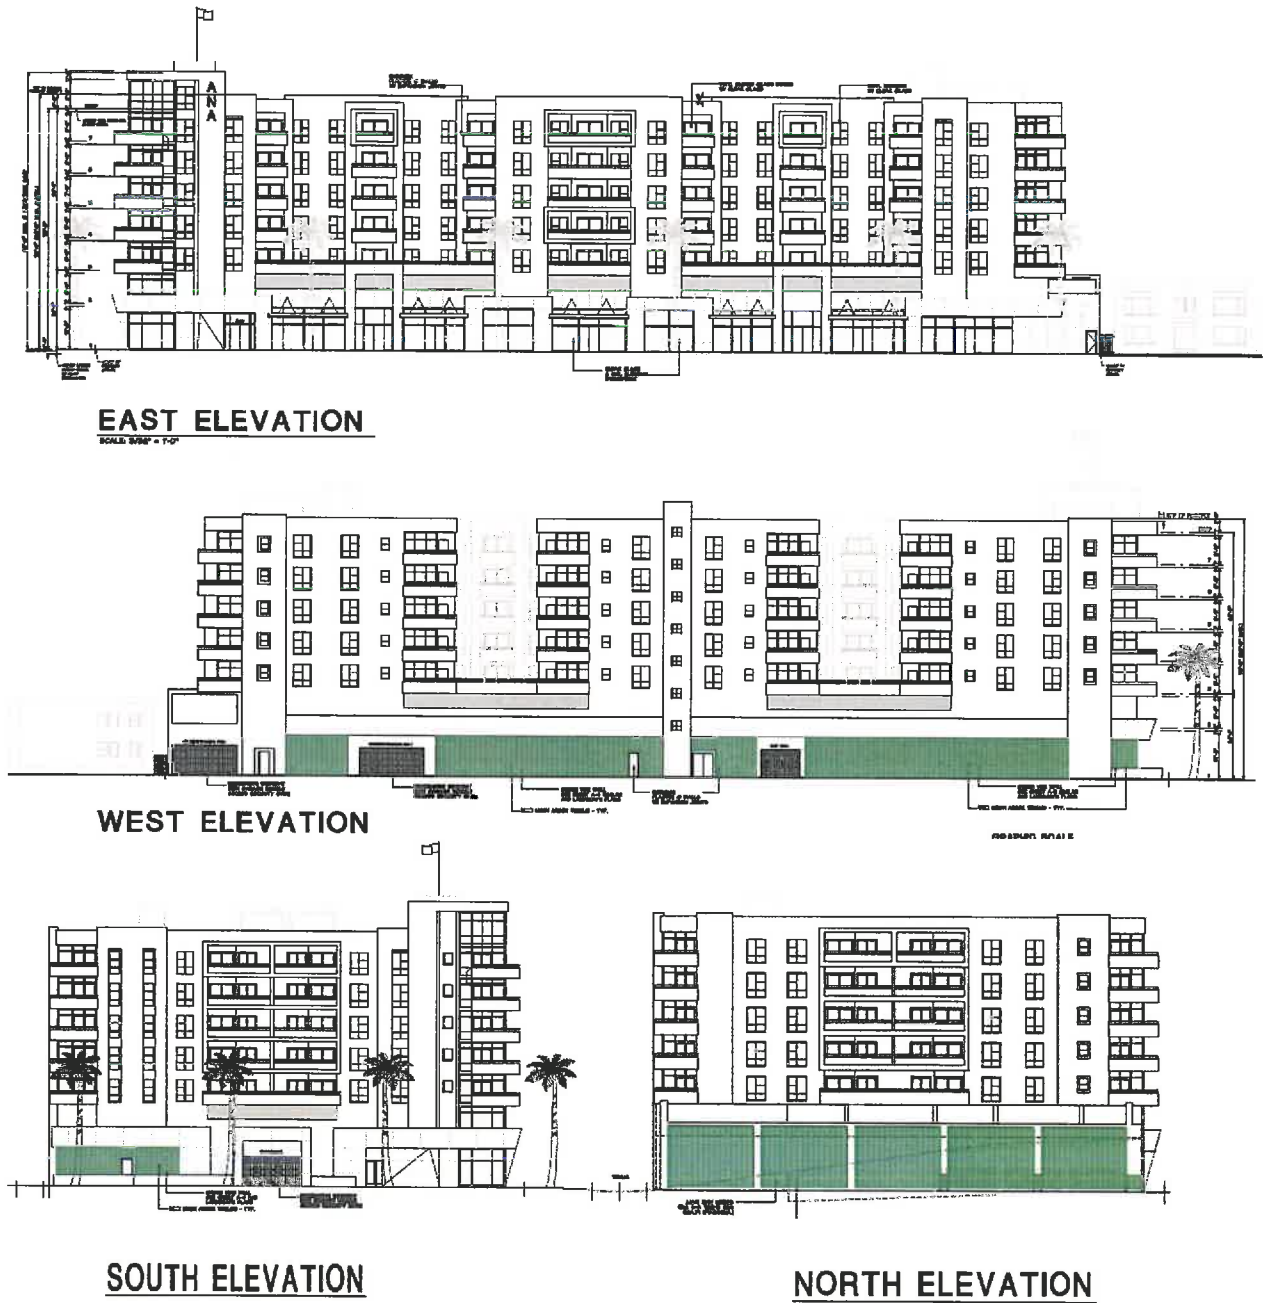

Figure 4. Proposed Building Elevations.

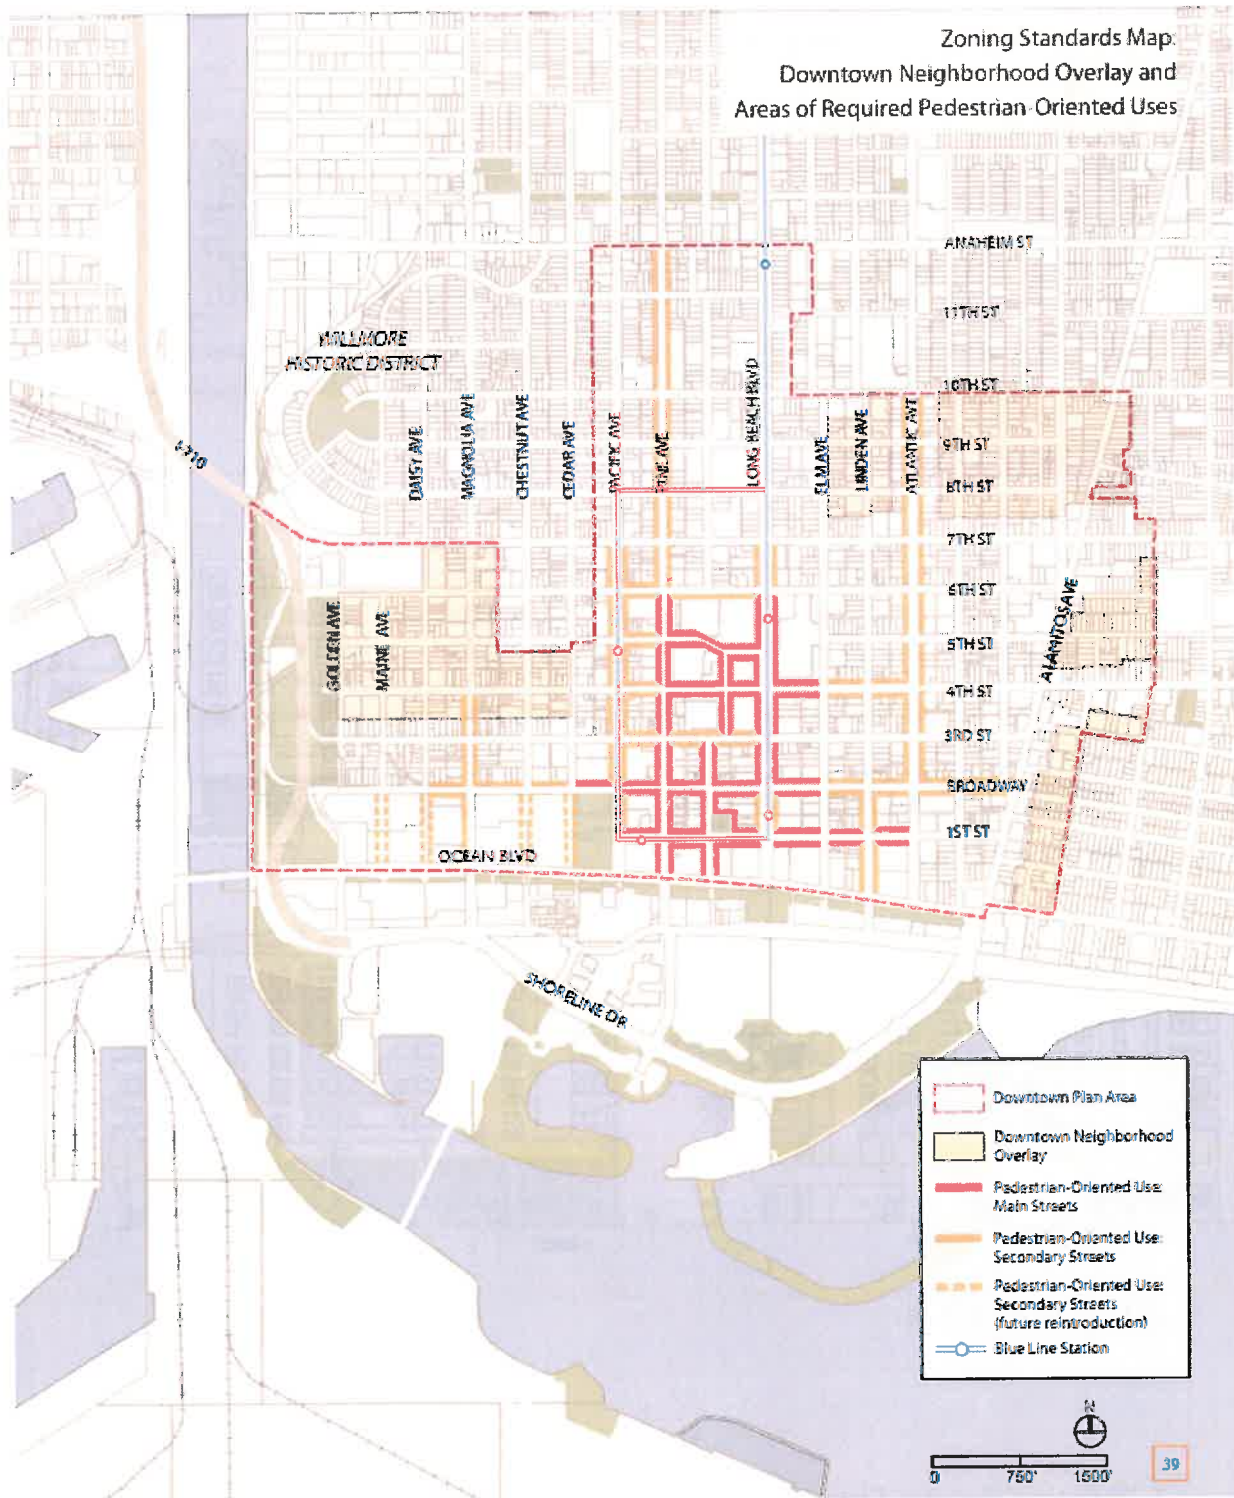

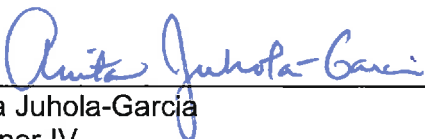

Figure 5. Downtown Plan Land Use Map.

DETERMINATION

On the basis of this compliance checklist:

- ☐ I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect (a) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (b) has been addressed by mitigation measures based on the earlier analysis, as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
- ☒ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

Anita Juhola-Garcia

12-18-2018

Date

FORMAT AND EVALUATION OF IMPACTS

Format of this Environmental Compliance Checklist

The Downtown Plan PEIR analyzed potential environmental impacts of the implementation of the Downtown Plan by utilizing the Environmental Checklist Form included in Appendix G of the CEQA Guidelines. The City determined that an EIR would be required for the Downtown Plan Project, and issued a Notice of Preparation (NOP) and Initial Study in June 2009 (Refer to Appendix A of the Downtown Plan Draft PEIR). The NOP process was used to help determine the scope of the environmental issues to be addressed in the Draft PEIR.

Based on this process and the Initial Study for the Downtown Plan, certain environmental categories were identified as having the potential to result in significant impacts. Issues considered Potentially Significant were addressed in the Downtown Plan Draft PEIR. Issues identified as Less Than Significant or No Impact were not addressed beyond the discussion contained in the Initial Study.

The analysis in this Environmental Compliance Checklist will include all environmental topics analyzed in the PEIR prepared for the Downtown Plan. For each impact identified in this Environmental Compliance Checklist, a summary of the analysis in the Downtown Plan PEIR and statement of the level of significance of the impact are provided. Included in the analysis is a determination if the mitigation measures identified in the Downtown Plan PEIR are applicable to the Project, and whether there are any additional impacts not previously identified in the Downtown Plan PEIR, which would therefore require the implementation of new mitigation measures. Components of certain mitigation measures identified in the Downtown Plan PEIR are not applicable to this project, and therefore have been shown as stricken.

The Environmental Compliance Checklist applies the following determination of impacts:

- Potentially Significant Impact Not Identified in Downtown Plan PEIR
- No Impact/No Change to Downtown Plan PEIR

Evaluation of Environmental Impacts

CEQA requires a Lead Agency to consider the information contained in the EIR prior to taking any discretionary action on the proposed project. This document has been prepared in accordance with the California Environmental Quality Act. According to Section 15168(c)(2) of the State CEQA Guidelines, a Program EIR can be used in compliance with CEQA to address the effects of a subsequent activity, so long as the activity of the project is within the scope of the Program EIR, and no new effects are found and no new mitigation measures are required. As supported by the analysis presented in this document, the Project would not result in new or substantially more severe significant environmental impacts than were analyzed in the Downtown Plan PEIR.

In addition, CEQA Guidelines Section 15183.3 allows streamlining for certain qualified infill projects by limiting the topics subject to review at the project level where the effects of infill development have been addressed in a planning level decision or by uniformly applicable development policies. An infill project is eligible if: 1) It is located in an urban area on a site that either has been previously developed or that adjoins existing qualified urban uses on at least 75 percent of the site's perimeter; 2) It satisfies the performance standards in Appendix M of the State CEQA Guidelines; and 3) It is consistent with the general use designation, density, building intensity, and applicable policies specified for the project area in either a sustainable communities strategy or an alternative planning strategy.

This document has been prepared in accordance with California Environmental Quality Act. According to Section 15162 of the State CEQA Guidelines, when a Program EIR has been certified for a project, no new subsequent EIR needs to be prepared as long as the activity of the project is within the scope of the program EIR, and no new effects are found and no new mitigation measures are required. As supported by the analysis presented in this document, the Project would not result in new or substantially more severe significant environmental impacts than was analyzed in the Downtown Plan PEIR.

This environmental compliance review is intended to serve as an informational document to be considered by the City and its decision-making bodies during deliberations and actions on the proposed project.

General Guidelines for Responses

- 1) A brief explanation is required for all answers except “No Impact” answers that are supported adequately by the information sources a lead agency cites in the parenthesis following each question. A “No Impact” answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g. the project falls outside a fault rupture zone). A “No Impact” answer should be explained where it is based on project-specific factors as well as general standards (e.g. the project will not expose sensitive receptors to pollutants, based on a project specific screening analysis).
- 2) All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
- 3) Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. “Potentially Significant Impact” is appropriate if there is substantial evidence that an effect may be significant. If there are one or more “Potentially Significant Impact” entries when the determination is made, an EIR is required.
- 4) “Negative Declaration; Less Than Significant With Mitigation Incorporation” applies where the incorporation of mitigation measures has reduced an effect from “Potentially Significant Impact” to a “Less Than Significant Impact.” The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from “Earlier Analysis,” as described in (5) below, may be cross-referenced).
- 5) Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or Negative Declaration (per Section 15063(c)(3)(D)). In this case, a brief discussion should identify the following:
 - a) Earlier Analysis Used. Identify and state where they are available for review.
 - b) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effect were addressed by mitigation measures based on the earlier analysis.
 - c) Mitigation Measures. For effects that are “Less than Significant with Mitigation Measures Incorporated,” describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.
- 6) Supporting information Sources: A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.
- 7) The explanation of each issue should identify:

- a) The significance criteria or threshold. If any, used to evaluate each question; and
- b) The mitigation measure identified, if any, to reduce the impact to less than significance.

ENVIRONMENTAL COMPLIANCE CHECKLIST

This checklist examines the impact determinations of the Downtown Plan, potential impacts of the proposed project, and mitigation measures included in the Downtown Plan PEIR. This chapter is divided into sections based on the Environmental Checklist Form included in the Downtown Plans PEIR.

Aesthetics

	Downtown Plan PEIR Determination	Potentially Significant Impact Not Identified in Downtown Plan PEIR	No Impact/ No Change to Downtown Plan PEIR
Impact Area: Aesthetics			
Would the Project:			
c) Substantially degrade the existing visual character or quality of the site and its surroundings?	Significant and Unavoidable	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	Less Than Significant With Mitigation	<input type="checkbox"/>	<input checked="" type="checkbox"/>

- c) *Would the project substantially degrade the existing visual character or quality of the site and its surroundings?*

The Downtown Plan PEIR found that construction of high-rise structures would cast shadows onto adjacent properties. Mitigation Measure AES-3 was included to apply to project-level development review:

Mitigation Measure AES-3 – Shadow Impacts - Prior to the issuance of building permits for any structure exceeding 75 feet in height or any structure that is adjacent to a light sensitive use and exceeds 45 feet in height, the applicant shall submit a shading study that includes calculations of the extent of shadowing arches for winter and equinox conditions. If feasible, projects shall be designed to avoid shading of light sensitive uses in excess of the significance thresholds outlined in this EIR. If avoidance of shadows exceeding significance thresholds is determined to be infeasible, the shadow impact will be disclosed as part of a project environmental impact report (EIR)."

The proposed seven-story tall, mixed-use project with a building height of 79-feet warranted a shade impact study (Appendix A). The shading study demonstrated that shade impacts were expected to be greater than the previous buildings located on the project site due to the increase of building height from two-stories to 7-stories. However, no area is affected for more than 4 hours, with majority of the shadow cast on the public right-of-way.

The project is not expected to cast shadows over “light-sensitive” uses, as defined in the Final PEIR. Shadow impacts are considered significant if shadow-sensitive uses would be shaded by proposed structures for more than 3 hours between late October and early April (including Winter Solstice), or for more than 4 hours between early April and late October (including Summer Solstice). The shadow study concluded that the shadows cast by the Project would not exceed the defined thresholds for the Winter and Summer Solstice on light-sensitive uses. During the Downtown Plan PEIR’s public comment period, the Long Beach Unified School District clarified that school uses were considered light-sensitive uses. The Project site is located well over 1,000 feet from the nearest school (Oropeza Elementary School). The seven-story development would not cast a shadow on defined light sensitive uses, therefore no further study of this issue is warranted.

NO IMPACT NOT IDENTIFIED IN PREVIOUS EIR

- d) *Would the project create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?*

The Downtown Plan PEIR determined that extensive use of glass and reflective materials on building façades for new development might cause light and glare impacts on nearby properties, but that inclusion of Mitigation Measures AES-2(a) through AES-2(d) would result in impacts that were less than significant.

Mitigation Measure AES-2(a) Lighting Plans and Specifications. Prior to the issuance of building permits for new large development projects, the applicant shall submit lighting plans and specifications for all exterior lighting fixtures and light standards to the Development Services Department for review and approval. The plans shall include a photometric design study demonstrating that all outdoor light fixtures to be installed are designed or located in a manner as to contain the direct rays from the lights onsite and to minimize spillover of light onto surrounding properties or roadways. All parking structure lighting shall be shielded and directed away from residential uses. Rooftop decks and other similar amenities are encouraged in the Plan. Lighting for such features shall be designed so that light is directed so as to provide adequate security and minimal spill-over or nuisance lighting.

A lighting plan and photometric study detailing all exterior lighting fixtures and light standards will be required in the Project’s building permit submittal as a condition of approval.

Mitigation Measure AES-2(b) Building Material Specifications. Prior to the issuance of any building permits for development projects, applicants shall submit plans and specifications for all building materials to the Development Services Department for review and approval. The Plan provides measures to ensure that the highest quality materials are used for new development projects. This is an important consideration, since high quality materials last longer. Quality development provides an impression of permanence and can encourage additional private investment in Downtown Long Beach.

A Project materials board was filed with the Site Plan Review submittal. Proposed building materials were found to be of high quality and durability.

Mitigation Measure AES-2(c) Light Fixture Shielding. Prior to the issuance of building permits for development projects within the Downtown Plan Project area, applicants shall demonstrate to the Development Services Department that all-night lighting installed on private property within

the project site shall be shielded, directed away from residential and lighting, or aviation warning lights, shall be in accordance with Airport/Federal Aviation Administration (FAA) requirements. Additionally, all lighting shall comply with all applicable Airport Land Use Plan (ALUP) Safety Policies and FAA regulations.

The Project's lighting plan and photometric study will include a night lighting analysis, as per the Project's conditions of approval.

Mitigation Measure AES-2(d) Window Tinting. Prior to the issuance of any building permits, the applicant shall submit plans and specifications showing that building windows are manufactured or tinted to minimize glare from interior lighting and to minimize heat gain in accordance with energy conservation measures.

Final window selections will be reviewed during the building permit process for consistency with glare-reduction and energy conservation guidelines. Final window selections shall require Director of Development Services approval, as per the Project's conditions of approval.

No impact related to lighting and glare beyond that identified in the Downtown Plan PEIR would occur and further study of the issue is not warranted.

NO IMPACT NOT IDENTIFIED IN PREVIOUS EIR

Agricultural Resources

Based on the Initial Study for the Downtown Plan (Appendix A in the Downtown Plan PEIR), all three significance thresholds for agricultural resources were identified as having no impact. The project site is located within an urbanized area with no agricultural uses therefore no further study of these issues is warranted.

Air Quality

	Downtown Plan PEIR Determination	Potentially Significant Impact Not Identified in Downtown Plan PEIR	No Impact/ No Change to Downtown Plan PEIR
Impact Area: Air Quality			
Would the Project:			
a) Conflict with or obstruct implementation of the applicable air quality plan?	Significant and Unavoidable	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation?	Significant and Unavoidable	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?	Significant and Unavoidable	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Expose sensitive receptors to substantial pollutant concentrations?	Significant and Unavoidable	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Create objectionable odors affecting a substantial number of people?	Less Than Significant with Mitigation	<input type="checkbox"/>	<input checked="" type="checkbox"/>

a) *Would the project conflict with or obstruct implementation of the applicable air quality plan?*

b) *Would the project violate any air quality standard or contribute substantially to an existing or projected air quality violation?*

c) *Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?*

The Downtown Plan PEIR found that plan implementation would enable development that could generate a substantial increase in traffic and worsen operations at existing intersections within and near the project area. Air pollutant emissions from additional traffic and longer idling times at project area intersections could conflict with or obstruct implementation of air quality plans. Construction activity could also result in temporary air quality and odor impacts due to fugitive dust and exhaust emissions from diesel-powered construction equipment. Components of certain mitigation measures identified in the Downtown Plan PEIR are not applicable to this project, and

therefore have been shown as stricken. Mitigation Measures AQ-1(a), AQ-1(b), AQ-1(c), and AQ-2 were included to apply to project-level development review:

Mitigation Measure AQ-1(a) – Enhanced Exhaust Control Practices – To reduce short-term construction emissions, the City shall require that all construction projects that would require use of heavy-duty (50 horsepower [hp] or more), off-road vehicles to be used during construction shall require their contractors to implement the Enhanced Exhaust Control Practices (listed below) or whatever mitigation ensures are recommended by SCAQMD at the time individual portions of the site undergo construction, including those specified in the mitigation recommendations in the SCAQMD CEQA Handbook or SCAQMD's Mitigation Measures and Control Efficiencies recommendations located at the following url: http://www.aqmd.gov/ceqa/handbook/mitigation/MM_intro.html.

Enhanced Exhaust Control Practices

- The project applicant shall provide a plan for approval by the City, demonstrating that the heavy-duty (50 hp or more) off-road vehicles to be used in the construction project, including owned, leased, and subcontractor vehicles, will achieve a project-wide fleet-average 20 percent NO_x reduction, 20 percent VOC reduction, and 45 percent particulate reduction compared to the 2011 ARB fleet average, as contained in the URBEMIS output sheets in Appendix C. Acceptable options for reducing emissions may include use of late-model engines, low-emission diesel products, alternative fuels, engine retrofit technology, after-treatment products, and/or other options as they become available. SCAQMD, which is the resource agency for air quality in the Project area, can be used in an advisory role to demonstrate fleet-wide reductions. SCAQMD's mitigation measures for off-road engines can be used to identify an equipment fleet that achieves this reduction (SCAQMD 2007b).
- The project applicant shall submit to the City a comprehensive inventory of all off-road construction equipment, equal to or greater than 50 hp, that would be used an aggregate of 40 or more hours during any portion of the construction project. The inventory shall include the hp rating, engine production year, and projected hours of use for each piece of equipment. The inventory shall be updated and submitted monthly throughout the duration of the project, except that an inventory shall not be required for any 30-day period in which no construction activity occurs. At least 48 hours prior to the use of heavy-duty off-road equipment, the project representative shall provide the City with the anticipated construction timeline including start date and name and phone number of the project manager and onsite foreman. A visual survey of all in-operation equipment shall be made at least weekly, and a monthly summary of the visual survey results shall be submitted throughout the duration of the project, except that the monthly summary shall not be required for any 30-day period in which no construction activity occurs. The monthly summary shall include the quantity and type of vehicles surveyed and the dates of each survey. SCAQMD staff and/or other officials may conduct periodic site inspections to determine compliance.

If, at the time of construction, SCAQMD, CARB, or the EPA has adopted a regulation or new guidance applicable to construction emissions, compliance with the regulation or new guidance may completely or partially replace this mitigation if it is equal to or more effective than the mitigation contained herein, and if the City so permits. Such a determination must be supported by a project-level analysis and be approved by the City.

Mitigation Measure AQ-1(b) - Prior to construction of each development phase of onsite land uses that are proposed within 1,500 feet of sensitive receptors, each project applicant shall perform a project-level CEQA analysis that includes a detailed LST analysis of construction-generated emissions of NO₂, CO, PM₁₀, and PM_{2.5} to assess the impact at nearby sensitive

receptors. The LST analysis shall be performed in accordance with applicable SCAQMD guidance that is in place at the time the analysis is performed. The project-level analysis, to be completed prior to the issuance of building permits, shall incorporate detailed parameters of the construction equipment and activities, including the year during which construction would be performed, as well as the proximity of potentially affected receptors, including receptors proposed by the project that exist at the time the construction activity would occur.

Mitigation Measure AQ-1(c) – Prior to issuance of a grading permit, the project plans shall include the following provisions to reduce construction-related air quality impacts:

- Provide temporary traffic controls such as a flag person, during all phases of construction to maintain smooth traffic flow;
- Provide dedicated turn lanes for movement of construction trucks and equipment on- and off-site;
- Reroute construction trucks away from congested streets or sensitive receptor areas;
- Appoint a construction relations officer to act as a community liaison concerning onsite construction activity including resolution of issues related to PM10 generation;
- Improve traffic flow by signal synchronization, and ensure that all vehicles and equipment will be properly tuned and maintained according to manufacturers' specifications;
- Use coatings and solvents with a VOC content lower than that required under AQMD Rule 1113;
- Construct or build with materials that do not require painting;
- Require the use of pre-painted construction materials if available;
- Require the use of 2010 and newer diesel haul trucks (e.g., material delivery trucks and soil import/export);
 - During project construction, all internal combustion engines/construction equipment operating on the project site shall meet EPA-Certified Tier 2 emissions standards, or higher according to the following:
 - ~~Project Start, to December 31, 2011: All offroad diesel-powered construction equipment greater than 50 hp shall meet Tier 2 offroad emissions standards. In addition, all construction equipment shall be outfitted with the BACT devices certified by CARB. Any emissions control device used by the contractor shall achieve emissions reductions that are no less than what could be achieved by a Level 2 or Level 3 diesel emissions control strategy for a similarly sized engine as defined by CARB regulations.~~
 - ~~January 1, 2012, to December 31, 2014: All offroad diesel-powered construction equipment greater than 50 hp shall meet Tier 3 offroad emissions standards. In addition, all construction equipment shall be outfitted with BACT devices certified by CARB. Any emissions control device used by the contractor shall achieve emissions reductions that are no less than what could be achieved by a Level 3 diesel emissions control strategy for a similarly sized engine as defined by CARB regulations.~~
 - Post-January 1, 2015: All offroad diesel-powered construction equipment greater than 50 hp shall meet the Tier 4 emission standards, where available. In addition, all construction equipment shall be outfitted with BACT devices certified by CARB. Any emissions control device used by the contractor shall achieve emissions reductions that are no less than what could be achieved by a Level 3 diesel emissions control strategy for a similarly sized engine as defined by CARB regulations.
- A copy of each unit's certified tier specification, BACT documentation, and CARB or SCAQMD operating permit shall be provided at the time of mobilization of each applicable unit of equipment.
- Encourage construction contractors to apply for AQMD "SOON" funds. Incentives could be provided for those construction contractors who apply for AQMD "SOON" funds. The "SOON"

program provides funds to accelerate clean up of off-road diesel vehicles, such as heavy duty construction equipment. More information on this program can be found at the following website: <http://www.aqmd.gov/tao/Implementation/SOONProgram.htm>"

Mitigation Measure AQ-2 - Mitigation to reduce mobile source emissions due to implementation of the Plan addresses reducing the number of motor vehicle trips and reducing the emissions of individual vehicles under the control of the project applicant(s). The following measures shall be implemented by project applicant(s) unless it can be demonstrated to the City that the measures would not be feasible.

- The project applicant(s) for all project phases shall require the commercial development operator(s) to operate, maintain, and promote a ride-share program for employees of the various businesses.
- The project applicant(s) for all project phases shall include one or more secure bicycle parking areas within the property and encourage bicycle riding for both employees and customers.
- The proposed structures shall be designed to meet current Title 24 + 20 percent energy efficiency standards and shall include such measures as photovoltaic cells on the rooftops to achieve an additional 25 percent reduction in electricity use on an average sunny day.
- The City shall ensure that all new commercial developments include or have access to convenient shower and locker facilities for employees to encourage bicycle, walking, and jogging as options for commuting.
- The project applicant(s) for all project phases shall require that all equipment operated by the businesses within the facility be electric or use non-diesel engines.
- All truck loading and unloading docks shall be equipped with one 110/208-volt power outlet for every two-dock door. Diesel trucks shall be prohibited from idling more than 5 minutes and must be required to connect to the 110/208-volt power to run any auxiliary equipment. Signs outlining the idling restrictions shall be provided.

If, at the time of construction, SCAQMD, CARB, or EPA has adopted a regulation or new guidance applicable to mobile- and area-source emissions, compliance with the regulation or new guidance may completely or partially replace this mitigation if it is equal to or more effective than the mitigation contained herein, and if the City so permits. Such a determination shall be supported by a project-level analysis that is approved by the City.

The developer will be required to comply with LST analysis requirements and the listed construction-related air quality measures, per the Project's conditions of approval. During the Project's construction phase, Planning staff will coordinate with Building Bureau officials to verify compliance with enhanced exhaust control practices.

The developer has designed the building envelope in coordination with the mechanical and lighting systems to produce a minimum 20% increased efficiency over current Title 24 standards. During the Project's plan check phase, Building Bureau personnel will verify compliance with this energy efficiency standard.

The Project includes a small commercial component and a separate (garage) parking/loading area on the ground floor. The building location is directly adjacent to transit options, included a Metro Blue Line Light Rail Transit (LRT) station and bus lines along Pacific Avenue. Further study of this issue is not warranted.

NO IMPACT NOT IDENTIFIED IN PREVIOUS EIR

- d) *Would the project violate any air quality standard or contracture substantially to an existing or projected air quality violation?*

The Downtown Plan PEIR found that implementation of the Plan would result in a net increase in unmitigated long-term regional emissions of criteria air pollutants and ozone precursors that exceed SCAQMD's applicable thresholds, and would result in or substantially contribute to emissions concentrations that exceed the NAAQS and CAAQS. Mitigation Measure AQ-4(a), AQ-4(b), and AQ-5 were included to reduce exposure of sensitive receptors to operational emissions of TACs:

Mitigation Measure AQ-4(a) – The following measures shall be implemented to reduce exposure of sensitive receptors to operational emissions of TACs:

- ~~Proposed commercial land uses that have the potential to emit TACs or host TAC-generating activity (e.g., loading docks) shall be located away from existing and proposed onsite sensitive receptors such that they do not expose sensitive receptors to TAC emissions that exceed an incremental increase of 10 in 1 million for the cancer risk and/or a noncarcinogenic Hazard Index of 1.0.~~
- ~~Where necessary to reduce exposure of sensitive receptors to an incremental increase of 10 in 1 million for the cancer risk and/or a noncarcinogenic Hazard Index of 1.0, proposed commercial and industrial land uses that would host diesel trucks shall incorporate idle reduction strategies that reduce the main propulsion engine idling time through alternative technologies such as IdleAire, electrification of truck parking, and alternative energy sources for TRUs to allow diesel engines to be completely turned off.~~
- Signs shall be posted in at all loading docks and truck loading areas to indicate that diesel-powered delivery trucks must be shut off when not in use for longer than 5 minutes on the premises. This measure is consistent with the ATCM to Limit Diesel-Fueled Commercial Motor Vehicle Idling, which was approved by the California Office of Administrative Law in January 2005.
- Proposed facilities that would require the long-term use of diesel equipment and heavy-duty trucks shall develop a plan to reduce emissions, which may include such measures as scheduling activities when the residential uses are the least occupied, requiring equipment to be shut off when not in use, and prohibiting heavy trucks from idling.
- When determining the exact type of facility that would occupy the proposed commercial space, the City shall take into consideration its toxic-producing potential.
- ~~Commercial land uses that accommodate more than 100 trucks per day, or 40 trucks equipped with TRUs, within 1,000 feet of sensitive receptors (e.g., residences or schools) shall perform a site-specific project-level HRA in accordance with SCAQMD guidance for projects generating or attracting vehicular trips, especially heavy-duty diesel-fueled vehicles (SCAQMD 2003b). If the incremental increase in cancer risk determined by the HRA exceeds the threshold of significance recommended by SCAQMD or ARB at the time (if any), then all feasible mitigation measures shall be employed to minimize the impact.~~

Mitigation Measure AQ-4(b) - The City shall verify that the following measures are implemented by new developments to reduce exposure of sensitive receptors to emissions of TACs from POLB and stationary sources in the vicinity of the Downtown Plan Project area:

- All proposed residences in the Downtown Plan Project area shall be equipped with filter systems with high Minimum Efficiency Reporting Value (MERV) for removal of small particles (such as 0.3 micron) at all air intake points to the home. All proposed residences shall be constructed with mechanical ventilation systems that would allow occupants to keep windows and doors closed and allow for the introduction of fresh outside air without the requirement of open windows.
- The heating, ventilation, and air conditioning (HVAC) systems shall be used to maintain all residential units under positive pressure at all times.
- An ongoing education and maintenance plan about the filtration systems associated with HVAC shall be developed and implemented for residences.
- To the extent feasible, sensitive receptors shall be located as far away from the POLB as possible.

Mitigation Measure AQ-5 - The following additional guidelines, which are recommended in ARB's *Land Use Handbook: A Community Health Perspective* (ARB 2005) shall be implemented. The guidelines are considered to be advisory and not regulatory:

Sensitive receptors, such as residential units and daycare centers, shall not be located in the same building as dry-cleaning operations that use perchloroethylene. Dry-cleaning operations that use perchloroethylene shall not be located within 300 feet of any sensitive receptor. A setback of 500 feet shall be provided for operations with two or more machines.

The Project does not contain industrial land uses. The uses intended for the commercial space have not been determined at this time. Dry cleaning operations are a permitted use in PD-30. The ARB guidelines for citing dry cleaners that use perchloroethylene shall be referenced for all future dry cleaning uses proposed at the Project site. During the Project's plan check phase, Building Bureau personnel will verify compliance with the listed HVAC requirement during the Project's plan check phase to verify compliance. Further study of this issue is not warranted.

NO IMPACT NOT IDENTIFIED IN PREVIOUS EIR

e) Would the project create objectionable odors affecting a substantial number of people?

The Downtown Plan PEIR found that truck deliveries to commercial uses could intermittently and temporarily emit diesel odors, and that commercial uses could provide development of convenience uses that may include sources of odorous emissions that would be perceived as offensive to some individuals. Mitigation Measure AQ-6 was included to control exposure of sensitive receptors to operational odorous emissions. Mitigation Measure AQ-6 was determined not to be applicable to this residential project and therefore stricken below.

Mitigation Measure AQ-6 – The City shall ensure that all project applicant(s) implement the following measures:

- The City shall consider the odor-producing potential of land uses when reviewing future development proposals and when the exact type of facility that would occupy areas zoned for commercial, industrial, or mixed-use land uses is determined. Facilities that have the potential to emit objectionable odors shall be located as far away as feasible from existing and proposed sensitive receptors.
- Before the approval of building permits, odor-control devices shall be identified to mitigate the exposure of receptors to objectionable odors if a potential odor-producing source is to occupy

an area zoned for commercial land use. The identified odor-control devices shall be installed before the issuance of certificates of occupancy for the potentially odor-producing use. The odor-producing potential of a source and control devices shall be determined in coordination with SCAQMD and based on the number of complaints associated with existing sources of the same nature.

- Truck loading docks and delivery areas shall be located as far away as feasible from existing and proposed sensitive receptors.
- Signs shall be posted at all loading docks and truck loading areas to indicate that diesel-powered delivery trucks must be shut off when not in use for longer than 5 minutes on the premises in order to reduce idling emissions. This measure is consistent with the ATCM to Limit Diesel-Fueled Commercial Motor Vehicle Idling, which was approved by California's Office of Administrative Law in January 2005. (This measure is also required by Mitigation Measure AQ-4 to limit TAC emissions.)
- Proposed commercial and industrial land uses that have the potential to host diesel trucks shall incorporate idle-reduction strategies that reduce the main propulsion engine idling time through alternative technologies such as, IdleAire, electrification of truck parking, and alternative energy sources for TRUs to allow diesel engines to be completely turned off. (This measure is also required by Mitigation Measure AQ-4 to limit TAC emissions.)

In addition, mitigation measures identified under AQ-4(b) to reduce indoor exposure to TACs would also result in a reduction in the intensity of offensive odors from the surrounding odor sources.

The Downtown Plan PEIR found that with proper maintenance and design residential land uses are typically not a major source of odors. Additionally, the small-scale commercial land use will be reviewed during the building plan check phase and the Building Bureau will be responsible to ensure compliance with this measure. The project, a mixed-use project, is therefore anticipated to have a low odor-producing potential. Further study of this issue is not warranted.

NO IMPACT NOT IDENTIFIED IN PREVIOUS EIR

Biological Resources

Based on the Initial Study for the Downtown Plan (Appendix A in the Downtown Plan PEIR), all six significance thresholds for biological resources were identified as having no impact. Therefore, no further study of these issues is warranted.

Cultural Resources

	Downtown Plan PEIR Determination	Potentially Significant Impact Not Identified in Downtown Plan PEIR	No Impact/ No Change to Downtown Plan PEIR
Impact Area: Cultural Resources			
Would the Project:			
a) Cause a substantial adverse change in the significance of a historical resource as defined in § 15064.5?	Less Than Significant with Mitigation	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?	Less Than Significant with Mitigation	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	Less Than Significant with Mitigation	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Disturb any human remains, including those interred outside of formal cemeteries?	Less Than Significant with Mitigation	<input type="checkbox"/>	<input checked="" type="checkbox"/>

a) Would the project cause a substantial adverse change in the significance of a historical resource as defined in § 15064.5?

Historical structures and districts have been designated within the project area and many other buildings greater than 50 years old are also present. Designated historic resources and others not currently designated by the City as historic landmarks could be affected by demolition or remodeling. Mitigation Measures CR-1(a) and CR-1(b) were included to encourage the local landmark designation of 21 identified downtown properties, encourage the adaptive reuse of historic buildings, and to require a Historic Survey Report be performed for select landmark or potential landmark properties, and those 45 years of age or older.

Previously, the Project site was developed as the First Methodist Church. The building designed by architect Kenneth S. Wing, FAIA was constructed in phases between 1959 and 1974. Research into the subject property yielded no evidence that the building held historic significance, including affiliation with an important individual, movement, or event associated with the City of Long Beach, or was of significant architectural merit. Prior to the demolition of the church, an Eligibility Determination was prepared and found the demolition of the building to result in no adverse effect to a historic resource. (Appendix B)

~~**Mitigation Measure CR-1(a)** The City shall encourage the designation as local landmarks of 21 properties identified in Table 4.3-3 with the "Desired Outcome" of "Pursue Local Designation." The City will encourage the on-going maintenance and appropriate adaptive reuse of all properties in Table 4.3-2 (existing landmarks), and Table 4.3-3 as historic resources.~~

Mitigation Measure CR-1(b) – The following procedures shall be followed prior to issuance of a demolition permit or a building permit for alteration of any property listed in the Historic Survey Report (ICF Jones & Stokes 2009) by Status Code 3S, 3CS, 5S1, or 5S3; designated as a Historic Landmark (City of Long Beach 2010a); listed in Tables 4.3-2 and 4.3-3 of this PEIR; or other property 45 years of age or older that was not previously determined by the Historic Survey Report to be ineligible for National Register, California Register, or Local Landmark (Status Code 6L and 6Z):

Notification of Historic Preservation Staff

Historic Preservation staff in the City Development Services Department shall be notified upon receipt of any demolition permit or building permit for alteration of any property listed in the Historic Survey Report or other property 45 years of age or older that was not previously determined by the Historic Survey Report to be ineligible for National Register, California Register, or Local Landmark (Status Code 6L and 6Z)

Determination of Need for Historic Property Survey

In consultation with Historic Preservation staff, the City Development Services Department shall determine whether a formal historic property survey is needed and may require that the owner or applicant provide photographs of the property, including each building façade, with details of windows, siding, eaves, and streetscape views, and copies of the County Assessor and City building records, in order to make this determination.

Determination of Eligibility

If City Development Services Department staff determines that the property may be eligible for designation, the property shall be referred to the Cultural Heritage Commission, whose determination of eligibility shall be considered as part of the environmental determination for the project in accordance with CEQA.

Documentation Program

If the Cultural Heritage Commission determines that the property is eligible for historic listing, the City Development Services Department shall, in lieu of preservation, require that prior to demolition or alteration a Documentation Program be prepared to the satisfaction of the City Development Services Department, which shall include the following:

A. Photo Documentation

Documentation shall include professional quality photographs of the structure prior to demolition with 35 mm black and white photographs, 4" x 6" standard format, taken of all four elevations and with close-ups of select architectural elements, such as but not limited to, roof/wall junctions, window treatments, decorative hardware, any other elements of the building's exterior or interior, or other property features identified by the City Development Services Department to be documented. Photographs shall be of archival quality and easily reproducible.

B. Required Drawings

Measured drawings of the building's exterior elevations depicting existing conditions or other relevant features shall be produced from recorded, accurate measurements. If portions of the building are not accessible for measurement or cannot be reproduced from historic sources, they should not be drawn, but clearly labeled as not accessible. Drawings shall be produced in ink on translucent material or archivally stable material (blue-line drawings are acceptable). Standard drawing sizes are 19" x 24" or 24" x 36" and standard scale is 1/4" = 1 foot.

C. Archival Storage

~~Xerox copies or CD of the photographs and one set of the measured drawings shall be submitted for archival storage with the City Development Services Department; and one set of original photographs, negatives, and measured drawings shall be submitted for archival storage with such other historical repository identified by the City Development Services Department.~~

The site of the proposed mixed-use project is currently vacant. The site and previous improvements were not listed in the referenced Historic Survey Report. The Project site is currently a vacant lot. Therefore, no further study of this issue is warranted.

NO IMPACT NOT IDENTIFIED IN PREVIOUS EIR

- b) Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?*
- d) Would the project disturb any human remains, including those interred outside of formal cemeteries?*

The Downtown Plan Area is a fully urbanized setting subject to extensive disturbance from the construction of existing buildings and existing underground infrastructure. The Downtown Plan PEIR found that archeological and paleontological resources, geologic features, and human remains in the project area have likely been previously disturbed. Future construction of new land uses in the downtown area could result in additional surface and subsurface disturbance that may result in damage to previously unknown resources or remains. Mitigation Measures CR-2(a), CR-2(b), and CR-2(c) have been included to reduce potential impacts to archaeological resources.

Mitigation Measure CR-2(a) - A qualified project archaeologist or archaeological monitor approved by the City in advance of any ground-disturbing activities shall be present during excavation into native sediments and shall have the authority to halt excavation for inspection and protection of cultural resources. The archaeological monitor shall be empowered to halt or redirect ground-disturbing activities to allow the find to be evaluated. If the archaeological monitor determines the find to be significant, the project applicant and the City shall be notified and an appropriate treatment plan for the resources shall be prepared. The treatment plan shall include notification of a Native American representative and shall consider whether the resource should be preserved in place or removed to an appropriate repository as identified by the City.

Mitigation Measure CR-2(b) - The project archaeologist shall prepare a final report of the find for review and approval by the City and shall include a description of the resources unearthed, if any, treatment of the resources, and evaluation of the resources with respect to the California Register of Historic Resources and the National Register of Historic Places. The report shall be filed with the California Historic Resources Information System South Central Coastal Information Center. If the resources are found to be significant, a separate report including the results of the recovery and evaluation process shall be prepared.

Mitigation Measure CR-2(c) - If human remains are encountered during excavation and grading activities, State Health and Safety Code Section 7050.5 requires that no further disturbance shall occur until the County Coroner has made the necessary findings as to origin and disposition pursuant to Public Resources Code Section 5097.98. If the remains are

determined to be of Native American descent, the corner is to notify the Native American Heritage Commission (NAHC) within 24 hours. The NAHC will then identify the person(s) thought to be the Most Likely Descendent, who will help determine what course of action should be taken in dealing with the remains. Preservation in place and project design alternatives shall be considered as possible courses of action by the project applicant, the City, and the Most Likely Descendent.

For the proposed mixed-use project a qualified monitor will be retained, as required and conditioned. During the Project's plan check phase, Building Bureau personnel will verify compliance with ground disturbance monitoring to reduce potential impacts on unearthed resources. In the event significant resources are unearthed, a qualifying report will be produced and provided to the CHRISCCIC. In the event human remains are encountered during project activities the LA County Coroner (and NAHC, if necessary) will be notified. No further study of the issue is warranted.

NO IMPACT NOT IDENTIFIED IN PREVIOUS EIR

- c) *Would the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?*

In the event paleontological resources are encountered during excavation and grading activities, Mitigation Measures CR-3(a) and CR-3(b) have been included to reduce potential impacts to paleontological resources (including fossils) that may exist at the site.

Mitigation Measure CR-3(a) - A qualified paleontologist approved by the City in advance of any ground-disturbing activities shall be present during excavation into native sediments and shall have the authority to halt excavation for inspection and protection of paleontological resources. Monitoring shall consist of visually inspecting fresh exposures of rock for fossil remains and, where appropriate, collection of sediment samples for further analysis. The frequency of inspections shall be based on the rate of excavation and grading activities, the materials being excavated, the depth of excavation, and, if found, the abundance and type of fossils encountered.

Mitigation Measure – CR-3(b) - If a potential fossil is found, the paleontologist shall be allowed to temporarily divert or redirect excavation and grading in the area of the exposed fossil to evaluate and, if necessary, salvage the find. All fossils encountered and recovered shall be prepared to the point of identification and catalogued before they are donated to their final repository. Any fossils collected shall be donated to a public, non-profit institution with a research interest in the materials, such as the Natural History Museum of Los Angeles County and shall be accompanied by a report on the fossils collected and their significance, and notes, maps, and photographs of the salvage effort.

For the proposed mixed-use project a qualified paleontologist will be retained and present during excavation into native sediments. Fossils encountered and recovered shall be catalogued and donated, as specified. No further study of the issue is warranted.

NO IMPACT NOT IDENTIFIED IN PREVIOUS EIR

Geology/Soils

	Downtown Plan PEIR Determination	Potentially Significant Impact Not Identified in Downtown Plan PEIR	No Impact/ No Change to Downtown Plan PEIR
Impact Area: Geology/Soils			
Would the Project:			
a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:			
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42?	Less Than Significant with Mitigation	<input type="checkbox"/>	<input checked="" type="checkbox"/>
ii) Strong seismic ground shaking?	Less Than Significant with Mitigation	<input type="checkbox"/>	<input checked="" type="checkbox"/>
iii) Seismic-related ground failure, including liquefaction?	Less Than Significant with Mitigation	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	Less Than Significant with Mitigation	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?	Less Than Significant with Mitigation	<input type="checkbox"/>	<input checked="" type="checkbox"/>

- a) i) *Would the project expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault?*
- a) ii) *Would the project expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving Strong seismic ground shaking?*

The Downtown Plan PEIR found that faults associated with the Newport-Inglewood Fault Zone, which is mapped as an Alquist-Priolo Earthquake Fault Zone, is located within approximately 2 miles of the project area. Several other fault zones located within approximately 5 to 30 miles have the potential to impact the project area. Mitigation Measures Geo-1 were included to apply to project-level development review:

Mitigation Measure Geo-1 - New construction or structural remodeling of buildings proposed with the Project area shall be engineered to withstand the expected ground acceleration that may occur at the project site. The calculated design base ground motion for each project site shall take into consideration the soil type, potential for liquefaction, and the most current and applicable seismic attenuation methods that are available. All onsite structures shall comply with applicable provisions of the most recent UBC adopted by the City of Long Beach.

The Project will comply with all applicable provisions of the most recent UBC adopted by the City of Long Beach. During the Project's plan check phase Building Bureau personnel will verify compliance with all applicable ground motion standards and determine the need for a geotechnical investigation and geo-engineering study, as conditioned. Any investigation/study would comply with the listed specifications.

NO IMPACT NOT IDENTIFIED IN PREVIOUS EIR

-
- a) *iii) Would the project expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving seismic-related ground failure, including liquefaction?*

The Downtown Plan PEIR found that the PD-30 area immediately adjacent to the Los Angeles River channel as an area of the highest potential impact and the remainder of the PD-30 area as having a minimal potential for liquefaction. Within the central Downtown area, projects could encounter groundwater during subterranean excavation, in which liquefaction could occur. Mitigation Measure Geo-2 was included to apply to project-level development review:

Mitigation Measure Geo-2 - Prior to issuance of a building permit for new structures, the Department of Development Services shall determine, based on building height, depth, and location, whether a comprehensive geotechnical investigation and geo-engineering study shall be completed to adequately assess the liquefaction potential and compaction design of the soils underlying the proposed bottom grade of the structure. If a geotechnical investigation is required, borings shall be completed to at least 50 feet below the lowest proposed finished grade of the structure or 20 feet below the lowest caisson or footing (whichever is deeper). If these soils are confirmed to be prone to seismically induced liquefaction, appropriate techniques to minimize liquefaction potential shall be prescribed and implemented. All onsite structures shall comply with applicable methods of the UBC and California Building Code. Suitable measures to reduce liquefaction impacts could include specialized design of foundations by a structural engineer, removal or treatment of liquefiable soils to reduce the potential for liquefaction, drainage to lower the groundwater table to below the level of liquefiable soils, in-situ densification of soils, or other alterations to the sub-grade characteristics.

The Project will comply with all applicable provisions of the most recent UBC adopted by the City of Long Beach. During the Project's plan check phase Building Bureau personnel will verify

determine whether a comprehensive geotechnical investigation and geo-engineering study shall be completed, as conditioned. Any investigation/study would comply with the listed specifications.

NO IMPACT NOT IDENTIFIED IN PREVIOUS EIR

- c) *Would the project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?*
- d) *Would the project be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?*

The Downtown Plan PEIR determined that native soils in the PD-30 plan area typically have low expansion potential. The analysis notes that expansive clay deposits or unstable soils may also occur in the dredged fill areas adjacent to the Los Angeles River. Soil analysis are needed prior to development to evaluate the potential for expansive soils and to determine the appropriate foundation design. Mitigation Measure Geo-3 was included to apply to project-level development review:

Mitigation Measure Geo-3 - Prior to issuance of a building permit for new structures, the Department of Development Services shall determine the need for soil samples of final sub-grade areas and excavation sidewalls to be collected and analyzed for their expansion index. For areas where the expansion index is found to be greater than 20, grading and foundation designs shall be engineered to withstand the existing conditions. The expansion testing may be omitted if the grading and foundations are engineered to withstand the presence of highly expansive soils.

The Project will comply with all applicable provisions of the most recent UBC adopted by the City of Long Beach. During the Project's plan check phase Building Bureau personnel will determine the need for soil samples, as conditioned. Any investigation/study will comply with the listed specifications. In the event the soil samples indicate the expansion index exceeds 20, Building Bureau personnel will verify grading and foundation designs are engineered to withstand the existing conditions.

NO IMPACT NOT IDENTIFIED IN PREVIOUS EIR

Greenhouse Gas Emissions

		Potentially Significant Impact Not Identified in Downtown Plan PEIR	No Impact/ No Change to Downtown Plan PEIR
Downtown Plan PEIR Determination			
Impact Area: Greenhouse Gas Emissions			
Would the Project:			
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	Significant and Unavoidable	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emission of greenhouse gases?	Significant and Unavoidable	<input type="checkbox"/>	<input checked="" type="checkbox"/>

- a) *Would the project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?*

Construction Impacts

The Downtown Plan PEIR found that construction activities associated with implementation of the proposed Downtown Plan would result in increased generation of GHG emissions. Although the construction-related emissions would be temporary, the PEIR assumes that the GHG emissions associated with construction activities would result in a cumulatively considerable incremental contribution to this significant cumulative impact. Implementation of Mitigation Measures GHG-1(a) and GHG 1(b) would reduce construction vehicle emissions to the degree feasible, but because of the uncertainty with respect to GHG reductions from regulations that have not yet been developed, and because the GHGs generated by construction of land uses envisioned under the Downtown Plan could be considerable, the incremental contribution of GHG emissions from Downtown Plan related construction would be cumulatively considerable and therefore significant and unavoidable.

Mitigation Measure GHG-1(a) - Implement Mitigation Measure AQ-1. Implementation of the mitigation measures described in Section 4.2, Air Quality, of this PEIR, which would reduce construction emissions of criteria air pollutants and precursors, would also act to reduce GHG emissions associated with implementation of the Project. The construction mitigation measures for exhaust emissions are relevant to the global climate change impact because both criteria air pollutant and GHG emissions are frequently associated with combustion byproducts.

Mitigation Measure GHG-1(b) - Implement Additional Measures to Control Construction-Generated GHG Emissions. To further reduce construction-generated GHG emissions, the project applicant(s) of all public and private developments shall implement all feasible measures for reducing GHG emissions associated with construction that are recommended by the City

and/or SCAQMD at the time individual portions of the site undergo construction, including those specified in the mitigation recommendations in the SCAQMD CEQA Handbook or SCAQMD's Mitigation Measures and Control Efficiencies recommendations located at the following url: http://www.aqmd.gov/ceqa/handbook/mitigation/MM_intro.html. Such measures may reduce GHG exhaust emissions from the use of onsite equipment, worker commute trips, and truck trips carrying materials and equipment to and from the project site, as well as GHG emissions embodied in the materials selected for construction (e.g., concrete). Other measures may pertain to the materials used in construction. Prior to the construction of each development phase, the project applicant(s) shall obtain the most current list of GHG-reduction measures that are recommended by the City and/or SCAQMD and stipulate that these measures be implemented during the appropriate construction phase. The project applicant(s) for any particular development phase may submit to the City a report that substantiates why specific measures are considered infeasible for construction of that particular development phase and/or at that point in time. The report, including the substantiation for not implementing particular GHG-reduction measures, shall be approved by the City.

The City's recommended measures for reducing construction-related GHG emissions at the time of writing this PEIR are listed below and the project applicant(s) shall, at a minimum, be required to implement the following:

- Improve fuel efficiency from construction equipment:
 - reduce unnecessary idling (modify work practices, install auxiliary power for driver comfort),
 - perform equipment maintenance (inspections, detect failures early, corrections),
 - train equipment operators in proper use of equipment,
 - use the proper size of equipment for the job, and
 - use equipment with new technologies (repowered engines, electric drive trains).
- Use alternative fuels for electricity generators and welders at construction sites such as propane or solar, or use electrical power.
- Use an ARB-approved low-carbon fuel, such as biodiesel or renewable diesel for construction equipment (emissions of NO_x from the use of low carbon fuel must be reviewed and increases mitigated). Additional information about low-carbon fuels is available from ARB's Low Carbon Fuel Standard Program (ARB 2010a).
- Encourage and provide carpools, shuttle vans, transit passes and/or secure bicycle parking for construction worker commutes.
- Reduce electricity use in the construction office by using compact fluorescent bulbs, powering off computers every day, and replacing heating and cooling units with more efficient ones.
- Recycle or salvage non-hazardous construction and demolition debris (goal of at least 75 percent by weight).
- Use locally sourced or recycled materials for construction materials (goal of at least 20 percent based on costs for building materials, and based on volume for roadway, parking lot, sidewalk, and curb materials).
- Minimize the amount of concrete used for paved surfaces or use a low carbon concrete option.
- Produce concrete onsite if determined to be less emissive than transporting ready mix.
- Use EPA-certified SmartWay trucks for deliveries and equipment transport. Additional information about the SmartWay Transport Partnership Program is available from ARB's Heavy-Duty Vehicle GHG Measure (ARB 2010b) and EPA (EPA 2010).

- Develop a plan to efficiently use water for adequate dust control. This may consist of the use of non-potable water from a local source.

The proposed project involves construction and operation of a seven-story, 157-unit mixed-use structure. Project construction would involve generation of GHG emissions. The Downtown Plan PEIR determined that GHG construction impacts would be significant and unavoidable, but through incorporation of mitigation measures anticipated projects would fall within the scope of the Downtown Plan's PEIR analysis. With these mitigation measures incorporated, construction of the Project would not substantially increase the severity of GHG construction impacts beyond that identified in the Downtown Plan PEIR and no new impacts beyond those identified in the Downtown Plan PEIR would occur, further study of this issue is not warranted

NO IMPACT NOT IDENTIFIED IN PREVIOUS EIR

Operational Impacts

The Downtown Plan PEIR found that implementation of the Downtown Plan over the long term would contribute considerably to cumulative GHG emissions. Implementation of Mitigation Measures GHG-2(a) and GHG-2(b) would require project-specific mitigation measures that are appropriate and feasible during each phase or increment of downtown development, and would respond to changes in the regulatory environment and to new GHG reduction technologies that would continue to be innovated over time. However, it is unknown at the time of the PEIR preparation whether the selected project-specific measures in combination with GHG reductions realized from the regulatory environment would result in the attainable of the applicable GHG reduction goal. The incremental contribution of GHG emissions from Downtown Plan operations would be cumulatively considerable and therefore significant and unavoidable.

Mitigation Measure GHG-2(a) - Implement Mitigation Measure AQ-3. Implementation of the mitigation measures described in Section 4.2, which would reduce operational emissions of criteria air pollutants and precursors, would also act to reduce GHG emissions associated with implementation of the Project. The operational mitigation measures for exhaust emissions are relevant to the global climate change impact because both criteria air pollutant and GHG emissions are frequently associated with combustion byproducts.

Mitigation Measure GHG-2(b) - Implement Additional Measures to Reduce Operational GHG Emissions. For each increment of new development within the Project area requiring a discretionary approval (e.g., tentative subdivision map, conditional use permit, improvement plan), measures that reduce GHG emissions to the extent feasible and to the extent appropriate with respect to the state's progress at the time toward meeting GHG emissions reductions required by the California Global Warming Solutions Act of 2006 (AB 32) shall be imposed, as follows:

- The project applicant shall incorporate feasible GHG reduction measures that, in combination with existing and future regulatory measures developed under AB 32, will reduce GHG emissions associated with the operation of future project development phases and supporting roadway and infrastructure improvements by an amount sufficient to achieve the goal of 6.6 CO₂e/SP/year, if it is feasible to do so. The feasibility of potential GHG reduction measures shall be evaluated by the City at the time each phase of development is proposed to allow for ongoing innovations in GHG reduction technologies and incentives created in the regulatory environment.

- For each increment of new development, the project applicant shall obtain a list of potentially feasible GHG reduction measures to be considered in the development design from the City. The City's list of potentially feasible GHG reduction measures shall reflect the current state of the regulatory environment, which will continuously evolve under the mandate of AB 32. The project applicant(s) shall then submit to the City a mitigation report that contains an analysis demonstrating which GHG reduction measures are feasible for the associated reduction in GHG emissions, and the resulting CO₂e/SP/year metric. The report shall also demonstrate why measures not selected are considered infeasible. The mitigation report must be reviewed and approved by the City for the project applicant(s) to receive the City's discretionary approval for the applicable increment of development. In determining what measures should appropriately be imposed by a local government under the circumstances, the following factors shall be considered:
 - The extent to which rates of GHG emissions generated by motor vehicles traveling to, from, and within the Project site are projected to decrease over time as a result of regulations, policies, and/or plans that have already been adopted or may be adopted in the future by ARB or other public agency pursuant to AB 32, or by EPA;
 - The extent to which mobile-source GHG emissions, which at the time of writing this PEIR comprise a substantial portion of the state's GHG inventory, can also be reduced through design measures that result in trip reductions and reductions in trip length;
 - The extent to which GHG emissions emitted by the mix of power generation operated by SCE, the electrical utility that will serve the Project site, are projected to decrease pursuant to the Renewables Portfolio Standard required by SB 1078 and SB 107, as well as any future regulations, policies, and/or plans adopted by the federal and state governments that reduce GHG emissions from power generation;
 - The extent to which replacement of CCR Title 24 with the California Green Building Standards Code or other similar requirements will result in new buildings being more energy efficient and consequently more GHG efficient;
 - The extent to which any stationary sources of GHG emissions that would be operated on a proposed land use (e.g., industrial) are already subject to regulations, policies, and/or plans that reduce GHG emissions, particularly any future regulations that will be developed as part of ARB's implementation of AB 32, or other pertinent regulations on stationary sources that have the indirect effect of reducing GHG emissions;
 - The extent to which the feasibility of existing GHG reduction technologies may change in the future, and to which innovation in GHG reduction technologies will continue, effecting cost-benefit analyses that determine economic feasibility; and
 - Whether the total costs of proposed mitigation for GHG emissions, together with other mitigation measures required for the proposed development, are so great that a reasonably prudent property owner would not proceed with the project in the face of such costs.
- In considering how much, and what kind of, mitigation is necessary in light of these factors, the following list of options shall be considered, though the list is not intended to be exhaustive, as GHG-emission reduction strategies and their respective feasibility are likely to evolve over time. These measures are derived from multiple sources including the Mitigation Measure Summary in Appendix B of the California Air Pollution Control Officer's Association (CAPCOA) white paper, *CEQA & Climate Change* (CAPCOA 2008); CAPCOA's *Model Policies for Greenhouse Gases in General Plans* (CAPCOA 2009); and the California Attorney General's Office publication, *The California Environmental Quality Act: Addressing Global Warming Impacts at the Local Agency Level* (California Attorney General's Office 2010).

Energy Efficiency

- Include clean alternative energy features to promote energy self-sufficiency (e.g., photovoltaic cells, solar thermal electricity systems, small wind turbines).
- Design buildings to meet CEC Tier II requirements (e.g., exceeding the requirements of Title 24 [as of 2007] by 20 percent).
- Site buildings to take advantage of shade and prevailing winds and design landscaping and sun screens to reduce energy use.
- Install efficient lighting in all buildings (including residential). Also install lighting control systems, where practical. Use daylight as an integral part of lighting systems in all buildings.
- Install light-colored “cool” pavements, and strategically located shade trees along all bicycle and pedestrian routes.

Water Conservation and Efficiency

- With the exception of ornamental shade trees, use water-efficient landscapes with native, drought-resistant species in all public area and commercial landscaping. Use water-efficient turf in parks and other turf-dependent spaces.
- Install the infrastructure to use reclaimed water for landscape irrigation and/or washing cars.
- Install water-efficient irrigation systems and devices, such as soil moisture-based irrigation controls.
- Design buildings and lots to be water efficient. Only install water-efficient fixtures and appliances.
- Restrict watering methods (e.g., prohibit systems that apply water to non-vegetated surfaces) and control runoff. Prohibit businesses from using pressure washers for cleaning driveways, parking lots, sidewalks, and street surfaces. These restrictions should be included in the Covenants, Conditions, and Restrictions of the community.
- Provide education about water conservation and available programs and incentives.
- To reduce storm water runoff, which typically bogs down wastewater treatment systems and increases their energy consumption, construct driveways to single-family detached residences and parking lots and driveways of multi-family residential uses, with pervious surfaces. Possible designs include Hollywood drives (two concrete strips with vegetation or aggregate in between) and/or the use of porous concrete, porous asphalt, turf blocks, or pervious pavers.

Solid Waste Measures

- Reuse and recycle construction and demolition waste (including, but not limited to, soil, vegetation, concrete, lumber, metal, and cardboard).
- Provide interior and exterior storage areas for recyclables and green waste at all buildings.
- Provide adequate recycling containers in public areas, including parks, school grounds, golf courses, and pedestrian zones in areas of mixed-use development.
- Provide education and publicity about reducing waste and available recycling services.

Transportation and Motor Vehicles

- Promote ride-sharing programs and employment centers (e.g., by designating a certain percentage of parking spaces for ride-sharing vehicles, designating adequate passenger loading zones and waiting areas for ride-share vehicles, and providing a website or message board for coordinating ride-sharing).

- Provide the necessary facilities and infrastructure in all land use types to encourage the use of low- or zero-emission vehicles (e.g., electric vehicle charging facilities and conveniently located alternative fueling stations).
- ~~At industrial and commercial land uses, all forklifts, "yard trucks," or vehicles that are predominately used onsite at non-residential land uses shall be electric powered or powered by biofuels (such as biodiesel [B100]) that are produced from waste products, or shall use other technologies that do not rely on direct fossil fuel consumption.~~

The proposed project involves construction and operation of a seven-story mixed-use structure containing 157 dwelling units and 9,000 square feet of commercial space. Project operations would involve vehicular trips and other activities that would increase generation of GHG emissions. The Downtown Plan PEIR determined that GHG operational impacts would be significant and unavoidable, but through incorporation of mitigation measures anticipated projects would fall within the scope of the Downtown Plan's PEIR analysis.

The building in coordination with mechanical and lighting systems will produce 20-percent increased efficiency over current Title 24 standards. Mechanical and lighting systems will be designed to produce a low energy load for the building.

Strategies to reduce GHG emissions include site location, which is serviced by the Metro Blue Line on Pacific Avenue to the east and bus lines in the Project vicinity. The Metro Blue Line Pacific Avenue Station is located just south of the Project site. Additional efforts to reduce dependency on gas powered automobiles include a mixture of short term and long term bicycle parking facilities and the incorporation of a commuter bicycle storage area on the ground floor of the parking garage for convenient access. Accessible from Pacific Avenue and 5th Street on the ground level, 34 bicycle storage units are located in the parking garage. Within the development's parking garage future EV parking stalls will be provided.

Pacific Avenue and 5th Street will include street trees, and new green screen landscaping along Park Court and the north side of the building. These trees and landscape areas will reduce the heat gain from afternoon sun.

Drought resistant plants will be used throughout the project, as well as drip irrigation and an automatic weather based controller system(s) with rain gauge shutoff. Inside the units and in the common areas, water efficient fixtures and appliances will be specified.

To control solid waste, storage areas for recyclables and green waste will be provided in common spaces of the building with information displays regarding permitted recyclables.

With these mitigation measures incorporated, operation of the Project would not substantially increase the severity of GHG operation impacts beyond that identified in the Downtown Plan PEIR and no new impacts beyond those identified in the Downtown Plan PEIR would occur, further study of this issue is not warranted.

NO IMPACT NOT IDENTIFIED IN PREVIOUS EIR

b) Would the project conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

The Downtown Plan PEIR acknowledged that the Downtown Plan project area would be in development for multiple decades and during its lifetime would be subject to as-yet-undeveloped thresholds. There is a lag time between enactment of legislative fixes and the regulations that will implement these fixes. As a consequence, local government agencies are left to struggle with trying to discern the extent to which their decisions can and will influence GHG emissions versus what will-to-be-developed regulations will achieve. For this reason, the PEIR determined that the potential for the Downtown Plan to conflict with applicable plans, policies or regulations would be significant and unavoidable.

The project involves construction and operation of a seven-story mixed-use structure containing 157 dwelling units and 9,000 square feet of commercial space. Since this project would be implemented in conformity with the Downtown Plan but would not increase the severity of previously identified potential conflicts with existing and yet-to-be-determined GHG plans, policies and regulations, nor introduce new impacts related to such potential future but unknown legislation, further study of this issue is not warranted.

NO IMPACT NOT IDENTIFIED IN PREVIOUS EIR

Hazards and Hazardous Materials

	Downtown Plan PEIR Determination	Potentially Significant Impact Not Identified in Downtown Plan PEIR	No Impact/ No Change to Downtown Plan PEIR
Impact Area: Hazards and Hazardous Materials			
Would the Project:			
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	Less Than Significant with Mitigation	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	Less Than Significant with Mitigation	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	Less Than Significant with Mitigation	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	Less Than Significant with Mitigation	<input type="checkbox"/>	<input checked="" type="checkbox"/>

- a) *Would the project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?*
- b) *Would the project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?*
- c) *Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?*

a) – c) The Downtown Plan PEIR found that some types of commercial and residential land uses envisioned for the project area would not typically contain businesses involved in the transport, use, or disposal of substantial quantities of hazardous materials. However, some projects may

consist of construction activities would involve full or partial demolition of existing structures, which, due to their age, may contain asbestos and lead-based paints and materials. Compliance with existing rules and regulations, including South Coast Air Quality Management District Rule 1403 (Asbestos Demolition and Renovation Activities), California Occupational Safety and Health Administration regulations regarding lead-based materials, and California Code of Regulations Section 1532.1 requiring testing, monitoring, containment, and disposal of lead-based materials, should avoid significant hazardous materials impacts. Mitigation Measures Haz-1(a), Haz-1(b), and Haz-1(c) were included to apply to project-level development review:

~~**Haz-1(a)** – Prior to issuance of a demolition or renovation permit, a lead-based paint and asbestos survey shall be performed by a licensed sampling company. The lead-based paint survey shall be prepared for any structures predating 1982; an asbestos survey shall be performed for asbestos-containing insulation for any structure pre-dating 1986; and an asbestos survey shall be performed for asbestos-containing drywall for all structures for which drywall is to be removed. All testing procedures shall follow California and federal protocol. The lead-based paint and asbestos survey report shall quantify the areas of lead-based paint and asbestos-containing materials pursuant to California and federal standards.~~

~~**Haz-1(b)** – Prior to any demolition or renovation, onsite structures that contain asbestos must have the asbestos-containing material removed according to proper abatement procedures recommended by the asbestos consultant. All abatement activities shall be in compliance with California and federal OSHA and SCAQMD requirements. Only asbestos trained and certified abatement personnel shall be allowed to perform asbestos abatement. All asbestos-containing material removed from onsite structures shall be hauled to a licensed receiving facility and disposed of under proper manifest by a transportation company certified to handle asbestos. Following completion of the asbestos abatement, the asbestos consultant shall provide a report documenting the abatement procedures used, the volume of asbestos-containing material removed, where the material was moved to, and transportation and disposal manifests or dump tickets. The abatement report shall be prepared for the property owner or other responsible party and a copy shall be submitted to the City of Long Beach prior to issuance of a demolition or construction permit.~~

~~**Haz-1(c)** – Prior to the issuance of a permit for the renovation or demolition of any structure, a licensed lead-based paint consultant shall be contracted to evaluate the structure for lead-based paint. If lead-based paint is discovered, it shall be removed according to proper abatement procedures recommended by the consultant. All abatement activities shall be in compliance with California and federal OSHA and SCAQMD requirements. Only lead-based paint trained and certified abatement personnel shall be allowed to perform abatement activities. All lead-based paint removed from these structures shall be hauled and disposed of by a transportation company licensed to transport this type of material. In addition, the material shall be taken to a landfill or receiving facility licensed to accept the waste. Following completion of the lead-based paint abatement, the lead-based paint consultant shall provide a report documenting the abatement procedures used, the volume of lead-based paint removed, where the material was moved to, and transportation and disposal manifests or dump tickets. The abatement report shall be prepared for the property owner or other responsible party, with a copy submitted to the City of Long Beach prior to issuance of a demolition or construction permit.~~

The Project site does not contain commercial, residential or industrial buildings or land uses. Further study of this issue is therefore not warranted.

NO IMPACT NOT IDENTIFIED IN PREVIOUS EIR

- b) Would the project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?*
- d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?*

The PD-30 plan area has been developed since the 1920s, and the Downtown PEIR determined that many properties may have contaminants present in the soils. Disturbance of these surface or-near surface contaminants may result in exposures to health hazards. Mitigation Measures Haz-3(a), Haz-3(b), Haz-3(c), and Haz-3(d) were included to apply to project-level development review:

Mitigation Measure Haz-3(a) - All excavation and demolition projects conducted within the Project area shall be required to prepare a contingency plan to identify appropriate measures to be followed if contaminants are found or suspected or if structural features that could be associated with contaminants or hazardous materials are suspected or discovered. The contingency plan shall identify personnel to be notified, emergency contacts, and a sampling protocol to be implemented. The excavation and demolition contractors shall be made aware of the possibility of encountering unknown hazardous materials and shall be provided with appropriate contact and notification information. The contingency plan shall include a provision stating under what circumstances it would be safe to continue with the excavation or demolition, and shall identify the person authorized to make that determination.

Mitigation Measure Haz-3(b) - If contaminants are detected, the results of the soil sampling shall be forwarded to the appropriate local regulatory agency (Long Beach/Signal Hill Certified Unified Program Agency [CUPA], LARWQCB, or the state DTSC). Prior to any other ground disturbing activities at the site, the regulatory agency shall have reviewed the data and signed off on the property or such additional investigation or remedial activities that are deemed necessary have been completed and regulatory agency approval has been received. Groundwater is subject to pre-treatment during de-watering activities to meet National Pollutant Discharge Elimination System (NPDES) Construction Dewatering permit limits. The construction activities shall conform to the NPDES requirements. The RWQCB requires the water to be tested for possible pollutants. The developer shall collect groundwater samples from existing site wells to determine pre-treatment system requirements for extracted groundwater. A water treatment system shall be designed and installed for treatment of extracted groundwater removed during dewatering activities so that such water complies with the applicable RWQCB and NPDES permit standards before disposal.

Mitigation Measure Haz-3(c) - If concentrations of contaminants warrant site remediation, contaminated materials shall be remediated either prior to construction of structures or concurrent with construction. The contaminated materials shall be remediated under the supervision of an environmental consultant licensed to oversee such remediation. The remediation program shall also be approved by a regulatory oversight agency (Long Beach/Signal Hill CUPA, LARWQCB, or the state DTSC). All proper waste handling and disposal procedures shall be followed. Upon completion of the remediation, the environmental consultant shall prepare a report summarizing the project, the remediation

approach implemented, the analytical results after completion of the remediation, and all waste disposal or treatment manifests.

Mitigation Measure Haz-3(d) - If during the soil sampling, groundwater contamination is suspected or soil contamination is detected at depths at which groundwater could be encountered during demolition or construction, a groundwater sampling assessment shall be performed. If contaminants are detected in groundwater at levels that exceed maximum contaminant levels for those constituents in drinking water, or if the contaminants exceed health risk standards such as Preliminary Remediation Goals, 1 in 1 million cancer risk, or a health risk index above 1, the results of the groundwater sampling shall be forwarded to the appropriate regulatory agency (Long Beach/Signal Hill CUPA, LARWQCB, or the State DTSC). Prior to any other ground-disturbing

The project site is currently vacant, and was previously a church that did not store or dispose of hazardous materials. A Phase I Environmental Site Assessment (ESA) was completed for the Project site (Appendix C). The ESA conducted research on structures and uses on the site to determine if additional site investigations are required. The report did not recommend for any additional investigation of the site at this time. If hazardous materials are discovered during soil sampling, and/or prior to excavation, the contaminated materials shall be remediated under the supervision of an environmental consultant licensed to oversee such remediation. Furthermore, the results of the soil sampling shall be forwarded to the appropriate local regulatory agency (Long Beach/Signal Hill Certified Unified Program Agency [CUPA], LARWQCB, or the state DTSC). Further study of this issue is not warranted with the proposed mitigation.

NO IMPACT NOT IDENTIFIED IN PREVIOUS EIR

Hydrology and Water Quality

	Downtown Plan PEIR Determination	Potentially Significant Impact Not Identified in Downtown Plan PEIR	No Impact/ No Change to Downtown Plan PEIR
Impact Area: Hydrology and Water Quality			
Would the Project:			
a) Violate any water quality standards or waste discharge requirements?	Less Than Significant with Mitigation	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planner uses for which permits have been granted)?	Less Than Significant with Mitigation	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site?	Less Than Significant with Mitigation	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course if a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?	Less Than Significant with Mitigation	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?	Less Than Significant with Mitigation	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) Otherwise substantially degrade water quality?	Less Than Significant with Mitigation	<input type="checkbox"/>	<input checked="" type="checkbox"/>

- a) *Would the project violate any water quality standards or waste discharge requirements?*
- b) *Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planner uses for which permits have been granted)?*
- c) *Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site?*
- d) *Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?*
- e) *Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?*
- f) *Otherwise substantially degrade water quality?*

The Downtown Plan PEIR found that future development within the Downtown Plan project area could substantially deplete groundwater supplies via an increase in water demand due to the intensification of downtown development. Additionally, the Downtown Plan PEIR found that construction activities associated with future development of residential, hotel, office and other uses could result in discharges of urban pollutants into the City drainage system. This would include runoff from grading and excavation, fuel, lubricants, and solvents from construction vehicles and machinery; and trash and other debris. While this could result in a significant adverse impact, Mitigation Measure Hydro-1 would reduce potential water quality impacts from construction activities to a less than significant level.

Mitigation Measure Hydro-1 - Prior to issuance of a grading permit, the City Department of Development Services shall determine the need for the developer to prepare a SWPPP for the site. If required, the SWPPP shall be submitted for review and approval by the Department of Development Services prior to the issuance of any grading or building permits. The SWPPP shall fully comply with City and LARWQCB requirements and shall contain specific BMPs to be implemented during project construction to reduce erosion and sedimentation to the maximum extent practicable. The following BMPs or equivalent measures to control pollutant runoff shall be included within the project's grading and construction plans, if applicable:

Pollutant Escape: Deterrence

- Cover all storage areas, including soil piles, fuel and chemical depots. Protect from rain and wind with plastic sheets and temporary roofs.
- Implement tracking controls to reduce the tracking of sediment and debris from the construction site. At a minimum, entrances and exits shall be inspected daily and controls implemented as needed.
- Implement street sweeping and vacuuming as needed and as required.

Pollutant Containment Areas

- Locate all construction-related equipment and related processes that contain or generate pollutants (i.e., fuel, lubricants, solvents, cement dust, and slurry) in isolated areas with proper protection from escape.
- Locate construction-related equipment and processes that contain or generate pollutants in secure areas, away from storm drains and gutters.
- Place construction-related equipment and processes that contain or generate pollutants in bermed and plastic-lined depressions to contain all materials within that site in the event of accidental release or spill.
- Park, fuel, and clean all vehicles and equipment in one designated, contained area.

Pollutant Detainment Methods

- Protect downstream drainages from escaping pollutants by capturing materials carried in runoff and preventing transport from the site. Examples of detainment methods that retard movement of water and separate sediment and other contaminants are silt fences, hay bales, sand bags, berms, and silt and debris basins.

Recycling/Disposal

- Develop a protocol for maintaining a clean site. This includes proper recycling of construction-related materials and equipment fluids (i.e., concrete dust, cutting slurry, motor oil, and lubricants).
- Provide disposal facilities. Develop a protocol for cleanup and disposal of small construction wastes (i.e., dry concrete).

Hazardous Materials Identification and Response

- Develop a protocol for identifying risk operations and materials. Include protocol for identifying source and distribution of spilled materials.
- Provide a protocol for proper clean-up of equipment and construction materials, and disposal of spilled substances and associated cleanup materials.

Provide an emergency response plan that includes contingencies for assembling response teams and immediately notifying appropriate agencies.

The proposed 157-unit mixed-use structure with 9,000 square feet of commercial space would not create any new conditions not anticipated in the Downtown Plan PEIR. Construction of this mid-rise structure would not substantially increase the severity of impacts previously identified in the Downtown Plan PEIR or create any new impacts not identified in the Downtown Plan PEIR and further study of this issue is not warranted.

Future development in the Downtown Plan project area would generate various urban pollutants such as soil, herbicides, and pesticides that could adversely affect surface water and groundwater quality. While this could result in a significant adverse impact, Mitigation Measure Hydro-2 would reduce potential for urban pollutants into the City's stormwater collection system to a less than significant level.

Mitigation Measure Hydro-2 - Prior to issuance of a building permit, the Department of Development Services shall determine the need for the developer to prepare a SUSMP for the site. If required, the SUSMP shall be submitted for review and approval by the Department of Development Services prior to the issuance of any building permits. The City's review shall include a determination of whether installation of pollutant removal technology in existing or proposed storm drains adjacent to the project site should be required. The City's review is required to confirm that the SUSMP is consistent with the City's NPDES Permit No. CAS 004003

or a subsequently issued NPDES permit applicable at the time of project construction. A SUSMP consistent with the City's NPDES permit shall be incorporated into the project design plans prior to issuance of any building permits.

The proposed mixed-use project would not create any new urban pollutant discharge conditions not anticipated in the Downtown Plan PEIR. This mid-rise structure would not substantially increase the severity of discharge impacts previously identified in the Downtown Plan PEIR or create any new discharge impacts not identified in the Downtown Plan PEIR and further study of this issue is not warranted.

The increased land use intensity of future residential and commercial land uses allowed by the Downtown Plan could increase pervious surfaces and result in an increased volume of stormwater discharges into the existing storm drain infrastructure. While this could result in a significant adverse impact, Mitigation Measure Hydro-3 would reduce impacts from potentially increased volumes of stormwater discharges from new development to a less than significant level.

Mitigation Measure Hydro-3 - Prior to issuance of a building permit, the City Stormwater Management Division shall determine the need for the developer to conduct an analysis of the existing stormwater drainage system and to identify improvements needed to accommodate any projected increased runoff that would result from the proposed Project. The evaluation conducted by the developer shall include a determination of whether Low Impact Development (LID) practices and strategies should be incorporated into the project to reduce post-development peak stormwater runoff discharge rates to not exceed the estimated pre-development discharge rates.

The proposed mixed-use project would not create any new stormwater discharge conditions not anticipated in the Downtown Plan PEIR. This mid-rise structure would not substantially increase the severity of discharge impacts previously identified in the Downtown Plan PEIR or create any new discharge impacts not identified in the Downtown Plan PEIR and further study of this issue is not warranted.

NO IMPACT NOT IDENTIFIED IN PREVIOUS EIR

Land Use/Planning

	Downtown Plan PEIR Determination	Potentially Significant Impact Not Identified in Downtown Plan PEIR	No Impact/ No Change to Downtown Plan PEIR
Impact Area: Land Use/Planning			
Would the Project:			
b) Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?	Less Than Significant	<input type="checkbox"/>	<input checked="" type="checkbox"/>

b) Would the project conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?

Development within the Downtown Plan area is subject to consistency with the Land Use Element of the Long Beach General Plan and the PD-30 ordinance. The proposed residential project is consistent with the goals and provisions of these documents, and would continue the diverse mix of highly urban land uses in the downtown area. Further study of this issue is not warranted.

NO IMPACT NOT IDENTIFIED IN PREVIOUS EIR

Mineral Resources

Based on the Initial Study for the Downtown Plan (Appendix A in the Downtown Plan PEIR), both significance thresholds for mineral resources were identified as having no impact. Therefore, no further study of these issues is warranted.

Noise

	Downtown Plan PEIR Determination	Potentially Significant Impact Not Identified in Downtown Plan PEIR	No Impact/ No Change to Downtown Plan PEIR
Impact Area: Noise			
Would the Project result in:			
a) Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	Less Than Significant With Mitigation	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?	Significant And Unavoidable	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?	Less Than Significant With Mitigation	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?	Less Than Significant With Mitigation	<input type="checkbox"/>	<input checked="" type="checkbox"/>

- a) *Would the project result in the exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?*

The Downtown Plan PEIR found that construction of mid-rise structures would result in increased ambient noise levels in the project area, primarily from additional traffic associated with residential and commercial growth. Operation of construction equipment associated with this growth would also create temporary noise level increases. Mitigation Measures Noise-1(a) and Noise-1(b) were included to apply to project-level development review:

Mitigation Measure Noise-1(a) - The following measures shall be applied to proposed construction projects that are determined to have potential noise impacts from removal of existing pavement and structures, site grading and excavation, pile driving, building framing, and concrete pours and paving:

- All internal combustion-engine-driven equipment shall be equipped with mufflers that are in good operating condition and appropriate for the equipment.
- "Quiet" models of air compressors and other stationary construction equipment shall be employed where such technology exists.

- Stationary noise-generating equipment shall be located as far as reasonable from sensitive receptors when sensitive receptors adjoin or are within 150 feet of a construction site.
- Unnecessary idling of internal combustion engines (i.e., in excess of 5 minutes) shall be prohibited.
- Foundation pile holes shall be predrilled, as feasible based on geologic conditions, to minimize the number of impacts required to seat the pile.
- Construction-related traffic shall be routed along major roadways and away from noise-sensitive receptors.
- Construction activities, including the loading and unloading of materials and truck movements, shall be limited to the hours specified in the City Noise Ordinance (Section 8.80.202).
- Businesses, residences, and noise-sensitive land uses within 150 feet of construction sites shall be notified of the construction. The notification shall describe the activities anticipated, provide dates and hours, and provide contact information with a description of the complaint and response procedure.
- Each project implemented as part of the Plan shall designate a "construction liaison" that would be responsible for responding to any local complaints about construction noise. The liaison would determine the cause of the noise complaints (e.g., starting too early, bad muffler, etc.) and institute reasonable measures to correct the problem. A telephone number for the liaison shall be conspicuously posted at the construction site.
- If two or more noise complaints are registered, the liaison, or project representative, shall retain a City-approved noise consultant to conduct noise measurements at the locations that registered the complaints. The noise measurements shall be conducted for a minimum of 1 hour and shall include 1-minute intervals. The consultant shall prepare a letter report summarizing the measurements and potential measures to reduce noise levels to the maximum extent feasible. The letter report shall include all measurement and calculation data used in determining impacts and resolutions. The letter report shall be provided to code enforcement for determining the adequacy and if the recommendations are adequate.

Mitigation Measure Noise-1(b) The City will require the following measures, where applicable based on noise level of source, proximity of receptors, and presence of intervening structures, to be incorporated into contract specifications for construction projects within 300 feet of existing noise sensitive land uses (including, but not limited to residences, schools, hospitals/nursing homes, churches, and parks) implemented under the proposed Plan:

- Temporary noise barriers shall be constructed around construction sites adjacent to, or within 150 feet of, operational business, residences, or other noise-sensitive land uses. Temporary noise barriers shall be constructed of material with a minimum weight of 4 pounds per square foot with no gaps or perforations. Noise barriers may be constructed of, but are not limited to, 5/8-inch plywood, 5/8-inch oriented strand board, or hay bales.
- If a project-specific noise analysis determines that the barriers described above would not be sufficient to avoid a significant construction noise impact, a temporary sound control blanket barrier, shall be erected along building façades facing construction sites. This mitigation would only be necessary if conflicts occurred that were irresolvable by proper scheduling and other means of noise control were unavailable. The sound blankets are required to have a minimum breaking and tear strength of 120 pounds and 30 pounds, respectively. The sound blankets shall have a minimum sound transmission classification of 27 and noise reduction coefficient of 0.70. The sound blankets shall be of sufficient length to extend from the top of the building and

drape on the ground or be sealed at the ground. The sound blankets shall have a minimum overlap of 2 inches.

The identified construction noise measures will be overseen by the City of Long Beach Building Bureau. Identification and implementation of appropriate mitigation measures and contingencies shall be to the satisfaction of the Superintendent of Building & Safety. Further study of this issue is not warranted.

NO IMPACT NOT IDENTIFIED IN PREVIOUS EIR

b) Would the project result in the exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?

The Downtown Plan PEIR found that construction of mid-rise structures would include construction activities that would include vibration sources, including pile driving. Operation of construction equipment associated with the construction of this project would create temporary vibration increases. Mitigation Measure Noise-2 was included to apply to project-level development review:

Mitigation Measure Noise-2 – The City shall review all construction projects for potential vibration-generating activities from demolition, excavation, pile– driving, and construction within 100 feet of existing structures and shall require site-specific vibration studies to be conducted to determine the area of impact and to identify appropriate mitigation measures. The studies shall, at a minimum, include the following:

- Identification of the project's vibration compaction activities, pile driving, and other vibration-generating activities that have the potential to generate ground-borne vibration; and the sensitivity of nearby structures to ground-borne vibration. This task should be conducted by a qualified structural engineer.
- A vibration monitoring and construction contingency plan to identify structures where monitoring would be conducted; establish a vibration monitoring schedule; define structure-specific vibration limits; and address the need to conduct photo, elevation, and crack surveys to document before and after construction conditions. Construction contingencies shall be identified for actions to be taken when vibration levels approached the defined vibration limits.
- Maintain a monitoring log of vibrations during initial demolition activities and during pile driving activities. Monitoring results may indicate the need for a more or less intensive measurement schedule.
- Vibration levels limits for suspension of construction activities and implementation of contingencies to either lower vibration levels or secure the affected structures.
- Post-construction survey on structures where either monitoring has indicated high vibration levels or complaints of damage have been made. Make appropriate repairs or compensation where damage has occurred as a result of construction activities.

The identified vibration studies will be overseen by the City of Long Beach Building Bureau. Identification and implementation of appropriate mitigation measures and contingencies shall be to the satisfaction of the Superintendent of Building & Safety. Further study of this issue is not warranted.

The Downtown Plan EIR determined that the plan area could include land uses that would create vibration sources. These sources would be required to comply with the City's Municipal Code. Ground-borne vibration generated by heavy trucks used for delivery and distribution to commercial sites are not anticipated to be highly perceptible at distances greater than 25 feet. The Downtown Plan PEIR determined that it is not anticipated that these normal operations would result in ground-borne vibration levels that approach or exceed the Municipal Code vibration level limits. No operation mitigation was identified as impacts were determined to be less than significant.

The proposed residential project would not create any new operational vibration or ground-borne noise conditions not anticipated in the Downtown Plan PEIR. This mid-rise structure would not substantially increase the severity of operational vibration impacts previously identified in the Downtown Plan PEIR or create any new vibration impacts not identified in the Downtown Plan PEIR and further study of this issue is not warranted.

NO IMPACT NOT IDENTIFIED IN PREVIOUS EIR

- c) Would the project result in a substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?*
- d) A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?*

The Downtown Plan PEIR found that construction of mid-rise structures would result in increased ambient noise levels in the project area, primarily from additional traffic associated with residential and commercial growth. In addition, the co-location of residential uses and commercial uses could allow sensitive land uses in areas where noise levels could exceed acceptable standards. Mitigation Measures Noise-5 and Noise-6 were included to apply to project-level development review:

Mitigation Measure Noise-5 – In areas where new residential development would be exposed to L_{dn} of greater than 65dBA, the City will require site-specific noise studies prior to issuance of building permits to determine the area of impact and to present appropriate mitigation measures, which may include, but are not limited to the following:

- Utilize site planning to minimize noise in shared residential outdoor activity areas by locating the areas behind the buildings or in courtyards, or orienting the terraces to alleyways rather than streets, whenever possible.
- Provide mechanical ventilation in all residential units proposed along roadways or in areas where noise levels could exceed 65 dBA L_{dn} so that windows can remain closed at the choice of the occupants to maintain interior noise levels below 45 dBA L_{dn} .
- Install sound-rated windows and construction methods to provide the requisite noise control for residential units proposed along roadways or in areas where noise levels could exceed 70 dBA L_{dn} .

Mitigation Measure Noise-6 - In areas where new residential development would be located adjacent to commercial uses, the City will require site-specific noise studies prior to issuance of building permits to determine the area of impact and to present appropriate mitigation measures, which may include, but are not limited to the following:

- Require the placement of loading and unloading areas so that commercial buildings shield nearby residential land uses from noise generated by loading dock and delivery activities. If necessary, additional sound barriers shall be constructed on the commercial sites to protect nearby noise sensitive uses.
- Require the placement of all commercial HVAC machinery to be placed within mechanical equipment rooms wherever possible.
- Require the provision of localized noise barriers or rooftop parapets around HVAC, cooling towers, and mechanical equipment so that line-of-sight to the noise source from the property line of the noise sensitive receptors is blocked.

Prior to the issuance of building permits Planning staff will require a noise study to determine appropriate noise mitigation, as conditioned. The proposed project would include residential uses along Pacific Avenue, which is designated as a Major Avenue in the Mobility Element. Therefore, noise studies shall be prepared prior to the issuance of building permits and appropriate mitigation shall be implemented to reduce impacts below the level of significance.

NO IMPACT NOT IDENTIFIED IN PREVIOUS EIR

Population and Housing

	Downtown Plan PEIR Determination	Potentially Significant Impact Not Identified in Downtown Plan PEIR	No Impact/ No Change to Downtown Plan PEIR
Impact Area: Population and Housing			
Would the Project:			
a) Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	Significant and Unavoidable	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?	Significant and Unavoidable	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?	Significant and Unavoidable	<input type="checkbox"/>	<input checked="" type="checkbox"/>

- a) *Would the project induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?*
- b) *Would the project displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?*
- c) *Would the project displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?*

The Downtown Plan PEIR found that adoption and implementation of the Downtown Plan and implementing ordinances would result in a significant adverse impact related to Population and Housing if the goals, policies, objectives, or regulations established by the proposed documents, or if anticipated subsequent development in accordance with those documents, would cause any of the following impacts:

Impact Pop-1 The proposed Downtown Plan is intended to accommodate substantial population growth in the Downtown project area. Although the area is presently zoned to permit densities of up to and exceeding 138 dwelling units per acre under the existing PD-30 zone, the impact of this growth would be significant and unavoidable.

The Downtown Plan PEIR determined that the Downtown Plan project objectives include increasing the residential population and promoting job growth in the downtown project area.

Based on the City average of 2.90 persons per household (California Department of Finance 2009), the proposed 5,000 dwelling units would generate a net increase of approximately 13,500 new residents. As stated in Section 2.6.1 of this PEIR, the purpose of the Downtown Plan is to replace the existing planned development zoning for the downtown project area; provide more up-to-date guidance to respond to Downtown's current development context and trends; and to provide direction regarding the type, character, and standard of quality desired for development in the downtown project area. The Downtown Plan would continue the downtown project area's diverse mix of highly urban land uses and would facilitate population and employment growth that has been anticipated by the existing Long Beach General Plan and by the regional population projections developed by SCAG (Southern California Association of Governments).

Impact Pop-2 Implementation of the Downtown Plan would occur over a period of 25 years or longer and would result in the displacement of existing housing and people, primarily housed in medium density multi-family dwelling units. New development would occur at higher densities and with more modern housing, frequently as part of a mixed-use development. While many residents would relocate into different dwelling units either within or outside of the Downtown Plan area, they would be displaced from their existing dwelling units and may be unable to obtain similar housing with respect to quality, price, and/or location. Therefore, the Downtown Plan would have a significant adverse impact on the housing supply and may require construction of replacement housing elsewhere.

The Downtown Plan could result in removal of existing housing in older apartment buildings not suitable for rehabilitation. While implementation of the Downtown Plan could add approximately 5,000 new residential units over the existing conditions, the City experienced a 7.5 percent increase in population during the 1990s, a 2.6 percent increase in households, and less than a one percent increase in the housing stock. This imbalance in population and housing growth has resulted in fewer vacancies, upward pressure on housing prices, more people crowded into too few housing units, and reduced opportunity for residents displaced during implementation of the Downtown Plan to find equivalent housing in the local area. There is no assurance that short-term or long-term displacement of residents would not occur. Therefore, the Downtown Plan would contribute to existing housing deficiencies in the local area, which may cause a need to construct replacement housing elsewhere for the displaced households.

While the benefits from buildout of the Downtown Plan are acknowledged and the resulting population is expected to be consistent with SCAG population projections, the Downtown Plan is intended to accommodate substantial population growth in the Downtown Plan project area. The associated displacement of existing housing and people during implementation of the Downtown Plan would contribute to a cumulative impact on housing opportunities in the Downtown Plan project area and on the adjacent communities as displaced residents search for new housing for the area's increased population. Therefore, the Downtown Plan cumulative impact to population and housing would be significant and adverse.

The proposed mixed-use development with 157 residential units would provide additional housing units and population within the projected growth parameters of the Downtown Plan. This residential mid-rise structure would be consistent with the Downtown Plan project objectives of increased downtown area population and housing growth (proposed 5,000 new dwelling units that would generate a net increase of approximately 13,500 new residents). The 507 Pacific Avenue

Project would not substantially increase the severity of previously identified Downtown Plan impacts or create new significant impacts and therefore further study of this issue is not warranted.

NO IMPACT NOT IDENTIFIED IN PREVIOUS EIR

Public Services

	Downtown Plan PEIR Determination	Potentially Significant Impact Not Identified in Downtown Plan PEIR	No Impact/ No Change to Downtown Plan PEIR
Impact Area: Public Services			
Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:			
a) Fire protection?	Less Than Significant	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Police protection?	Less Than Significant	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Schools?	Less Than Significant	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Parks?	Significant and Unavoidable	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Libraries?	Less Than Significant	<input type="checkbox"/>	<input checked="" type="checkbox"/>

- a) *Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for fire protection?*

The Downtown Plan PEIR found that although the proposed project would incrementally increase demands on the Long Beach Fire Department, those increased demands would not require the construction of new fire protection facilities. The proposed residential project would not substantially increase the severity of demands for fire protection previously identified in the Downtown Plan PEIR and further study of this issue is not warranted.

NO IMPACT NOT IDENTIFIED IN PREVIOUS EIR

- b) *Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered*

governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for police protection?

The Downtown Plan PEIR found that although the proposed project would incrementally increase demands on the Long Beach Police Department, those increased demands would not require the construction of new police protection facilities. The proposed residential project would not substantially increase the severity of demands for police protection previously identified in the Downtown Plan PEIR and further study of this issue is not warranted.

NO IMPACT NOT IDENTIFIED IN PREVIOUS EIR

- c) *Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for schools?*

The Downtown Plan PEIR found that payment of required school impact fees prior to building permit issuance would avoid a significant impact to school services associated with the proposed mixed-use project, a 157-unit residential development.

NO IMPACT NOT IDENTIFIED IN PREVIOUS EIR

- d) *Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for parks?*

The Downtown Plan PEIR determined that based on the City standard of 8 acres of parkland per 1,000 residents, the entire Downtown Plan project area would generate demand for about 108 acres of parkland. Pertaining to the proposed project, which includes 157 residential units, the Downtown Plan PEIR includes a mitigation measure/finding requiring that developers pay park and recreation facilities in-lieu fees. However, the Downtown Plan PEIR also recognizes that it is not feasible for all of this open space to be provided in the Downtown Plan Project area.

NO IMPACT NOT IDENTIFIED IN PREVIOUS EIR

- e) *Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for libraries?*

The Downtown Plan PEIR found that although the proposed project may cause demands for library services to exceed the capacity of the Main Library, construction of new facilities to serve

the Downtown Plan Project area would not have a significant environmental impact not addressed in the PEIR.

NO IMPACT NOT IDENTIFIED IN PREVIOUS EIR

Transportation/Traffic

	Downtown Plan PEIR Determination	Potentially Significant Impact Not Identified in Downtown Plan PEIR	No Impact/ No Change to Downtown Plan PEIR
Impact Area: Transportation/Traffic			
Would the Project:			
a) Cause an increase in traffic which is substantial in relation to the existing traffic load and capacity of the street system (i.e., result in a substantial increase in either the number of vehicle trips, the volume to capacity ratio on roads, or congestion at intersections)?	Significant and Unavoidable	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Exceed, either individually or cumulatively, a level of service standard established by the county congestion management agency for designated roads or highways?	Significant and Unavoidable	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	No Impact	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Result in inadequate emergency access?	Less Than Significant	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) Result in inadequate parking capacity?	Less Than Significant	<input type="checkbox"/>	<input checked="" type="checkbox"/>

a) Would the project cause an increase in traffic which is substantial in relation to the existing traffic load and capacity of the street system (i.e., result in a substantial increase in either the number of vehicle trips, the volume to capacity ratio on roads, or congestion at intersections)?

b) Would the project exceed, either individually or cumulatively, a level of service standard established by the county congestion management agency for designated roads or highways?

The Downtown Plan PEIR found that future development would cause an increase in traffic that is substantial in relation to the existing traffic load and capacity of the street system and would result in a substantial increase in either the number of vehicle trips, the volume-to-capacity ratio on roads, or congestion at intersections. Mitigation Measures Traf-1(a), Traf-1(b), Traf-1(c), and Traf-1(d) were adopted to improve operations to level of service D or better at seven of 16 intersections deemed to be significantly impacted by future traffic.

Mitigation Measure Traf-1(a) - As the system's capacity is reached, it will become important to manage the street system in a more efficient and coordinated manner. Improvements to the Project area transportation system are proposed as part of the overall Downtown development, including improvements that have been required of other area projects previously approved by the City. Therefore, the mitigation focuses on improvements that would not require significant additional rights-of-way and are achievable within the life of the Plan. There are five proposed mitigation measures for the Downtown Plan, as follows:

1. Implement traffic control system improvements in Downtown on selected arterials.
2. Improve the Alamitos Avenue corridor via removal of selected parking spaces and the implementation of additional travel lanes plus bike lanes in each direction.
3. Reconfigure the 6th Street and 7th Street intersections with Martin Luther King Avenue and Alamitos Avenue for safety and traffic flow enhancements.
4. Enhance freeway access to I-710 to and from Downtown Long Beach.
5. Implement transit facilities and programs to encourage public transit usage and Transportation Demand Management Policies.

Mitigation Measure Traf-1(b) - A series of traffic signal system improvements are recommended in Downtown to accommodate the anticipated growth in travel. The following traffic signal system improvements are recommended as part of this mitigation measure:

1. Implement Adaptive Traffic Signal Control System (ATCS) improvements throughout Downtown consistent with currently planned improvements on Ocean Boulevard and Atlantic Avenue. Streets that are proposed to be included in the ATCS as a mitigation measure for the Downtown Long Beach Strategic Plan include the following:
 - Alamitos Avenue north of Ocean Boulevard
 - Pine Avenue north of Ocean Boulevard
 - Pacific Avenue north of Ocean Boulevard
 - 7th Street from I-710 to Alamitos Avenue
 - 6th Street from I-710 to Alamitos Avenue
 - Broadway from I-710 to Alamitos Avenue
 - Ocean Boulevard from Shoreline to Alamitos Avenue (to join the proposed system starting at Alamitos Avenue)
 - Others as needed, to be determined by the City Traffic Engineer and Public Works Director
2. Implement pan/tilt/zoom Closed Circuit Television Camera (CCTV) surveillance and communications with power and control capability to the Department of Public Works to monitor real-time traffic operations from rooftops of selected new buildings as needed and to be determined based on the location of appropriate new high-rise structures along the Alamitos Avenue, Shoreline Drive, and Ocean Boulevard corridors.
3. Implement transit signal priority for Long Beach Boulevard and upgrade traffic signal system equipment and operations along the Blue Line light rail route.
4. Upgrade and improve traffic signal equipment throughout Downtown for safety and operational enhancements.

Mitigation Measure Traf-1(c) - As part of this mitigation measure, a number of intersections would receive major or minor signal modifications, depending on their current status. In addition to the enhancements listed, other potential improvements that can be included are:

- Bicycle improvements (detection, signalization, etc.)
- In-pavement LED crosswalk lights
- Automatic pedestrian detection (i.e., infrared, microwave, or video detection)
- Illuminated push buttons
- Countdown pedestrian signals
- Adaptive pedestrian clearance (increasing the flashing DON'T WALK time based on location of pedestrians in the crosswalk)
- Enhanced signal equipment including mast arms, poles, signal heads, and other necessary enhancements for safety and operations
- Communications enhancements as needed to tie the system together with the Traffic Control Center in City Hall

Mitigation Measure Traf-1(d) - Traffic Calming and Pedestrian Amenities. Appropriate traffic calming and pedestrian amenities shall be provided in conjunction with development projects. Potential improvements include corner curb extensions, enhanced paving of crosswalks, and pedestrian-activated signals at mid-block crossings to make it easier for pedestrians to cross the street and to make them more visible to motorists. Other potential improvements include wider sidewalks in locations where the existing sidewalks are less than 10 feet wide, pedestrian-scale street lights, and street furniture (City of Long Beach 2005).

Mitigation Measure Traf-1(e) - Currently, due to on-street parking, there is only one lane of travel on Alamitos Avenue in the southbound direction between 3rd Street and Broadway. Parking spaces on the west side of Alamitos Avenue will be removed, the street will be restriped and reconstructed, a bike lane will be added in each direction of travel, and the street will provide for two travel lanes in each direction plus exclusive left turn lanes from 7th Street to Ocean Boulevard. Traffic signal enhancements to implement the Alamitos Avenue improvements shall also be implemented as needed.

The proposed multi-family residential project will be required to improve traffic signal related equipment at signalized intersections directly impacted by the project, as per conditions of approval from the City Traffic Engineer. A Traffic Study (Appendix C) was prepared for the proposed project and no new impacts were identified that warranted additional mitigation. No further study of the issue is warranted.

NO IMPACT NOT IDENTIFIED IN PREVIOUS EIR

d) Would the project substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

The proposed residential project does not propose to alter existing street patterns or create new pedestrian and bicycle pathways and street crossing locations. No further study of the issue is warranted.

NO IMPACT NOT IDENTIFIED IN PREVIOUS EIR

e) Would the project result in inadequate emergency access?

The proposed multi-family residential project does not propose alteration to the roadways system and, therefore, emergency access would continue as it does under existing conditions. There would be no additional impacts to routes of travel for emergency vehicles. No further study of the issue is warranted.

NO IMPACT NOT IDENTIFIED IN PREVIOUS EIR

f) Would the project result in inadequate parking capacity?

The proposed residential project will contain on-site vehicle, bicycle, and electric vehicle (EV) parking as required in the Downtown Plan. No further study of this issue is warranted.

NO IMPACT NOT IDENTIFIED IN PREVIOUS EIR

Tribal/Cultural Resources

	Downtown Plan PEIR Determination	Potentially Significant Impact Not Identified in Downtown Plan PEIR	No Impact/ No Change to Downtown Plan PEIR
Impact Area: Tribal/Cultural Resources			
Would the Project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, that is:			
a) Listed or eligible for listing in the California Register of Historic Resources, or in a local register of historic resources as defined in Public Resources Code Section 5020.1(k)?	Less Than Significant With Mitigation	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1? In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	Less Than Significant With Mitigation	<input type="checkbox"/>	<input checked="" type="checkbox"/>

- a) *Listed or eligible for listing in the California Register of Historic Resources, or in a local register of historic resources as defined in Public Resources Code Section 5020.1(k)?*
- b) *A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1? In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.*

While the Downtown Plan PEIR did not include a separate Section specifically devoted to Tribal Cultural Resources, this issue is included in the PEIR Cultural Resources Section. The Downtown Plan project area has been known to contain prehistoric resources from Native American

occupation of semi-permanent villages near the mouth of the Los Angeles River. Individual development projects may encounter these resources during demolition and excavation activities. Due to the lack of natural ground surfaces in the Downtown Plan project area, no surveys can be conducted prior to onset of demolition or other ground-disturbing activities. While the potential exists for such activities to encounter and damage archaeological resources, including Tribal Cultural Resources, Mitigation Measures CR-2(a), CR-2(b) and CR-2(c) would reduce potential impacts to a less than significant level.

Mitigation Measure CR-2(a) - A qualified project archaeologist or archaeological monitor approved by the City in advance of any ground-disturbing activities shall be present during excavation into native sediments and shall have the authority to halt excavation for inspection and protection of cultural resources. The archaeological monitor shall be empowered to halt or redirect ground-disturbing activities to allow the find to be evaluated. If the archaeological monitor determines the find to be significant, the project applicant and the City shall be notified and an appropriate treatment plan for the resources shall be prepared. The treatment plan shall include notification of a Native American representative and shall consider whether the resource should be preserved in place or removed to an appropriate repository as identified by the City.

Mitigation Measure CR-2(b) - The project archaeologist shall prepare a final report of the find for review and approval by the City and shall include a description of the resources unearthed, if any, treatment of the resources, and evaluation of the resources with respect to the California Register of Historic Resources and the National Register of Historic Places. The report shall be filed with the California Historic Resources Information System South Central Coastal Information Center. If the resources are found to be significant, a separate report including the results of the recovery and evaluation process shall be prepared.

Mitigation Measure CR-2(c) - If human remains are encountered during excavation and grading activities, State Health and Safety Code Section 7050.5 requires that no further disturbance shall occur until the County Coroner has made the necessary findings as to origin and disposition pursuant to Public Resources Code Section 5097.98. If the remains are determined to be of Native American descent, the coroner is to notify the Native American Heritage Commission (NAHC) within 24 hours. The NAHC will then identify the person(s) thought to be the Most Likely Descendent, who will help determine what course of action should be taken in dealing with the remains. Preservation in place and project design alternatives shall be considered as possible courses of action by the project applicant, the City, and the Most Likely Descendent.

507 Pacific Avenue Project – The potential exists to encounter previously undiscovered tribal cultural resources during construction ground disturbance and excavation activities. However, this mixed-use development would be subject to Mitigation Measures CR-2(a), CR-2(b), and CR-2(c), and as such would reduce the impacts of this development on tribal cultural resources to a less than significant level. This development would not substantially increase the severity of previously identified impacts in the PEIR or create any new significant impacts, and therefore no further study is warranted.

NO IMPACT NOT IDENTIFIED IN PREVIOUS EIR

Utilities and Service Systems

	Downtown Plan PEIR Determination	Potentially Significant Impact Not Identified in Downtown Plan PEIR	No Impact/ No Change to Downtown Plan PEIR
Impact Area: Utilities and Service Systems			
Would the Project:			
a) Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?	Less Than Significant	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	Less Than Significant with Mitigation	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	Less Than Significant with Mitigation	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed?	Less Than Significant	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	Less Than Significant with Mitigation	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?	Less Than Significant with Mitigation	<input type="checkbox"/>	<input checked="" type="checkbox"/>
g) Comply with federal, state, and local statutes and regulations related to solid waste?	Less Than Significant with Mitigation	<input type="checkbox"/>	<input checked="" type="checkbox"/>

- a) *Would the project exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?*
- b) *Would the project require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?*
- e) *Would the project result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?*

a), b), e). The Downtown Plan PEIR determined proposed Community Plan would allow more intense residential and commercial development in the Downtown area and would, therefore, increase the generation of wastewater. To determine whether the existing wastewater conveyance system and treatment plant have sufficient available capacity to accommodate wastewater from the planned development.

The added daily wastewater would increase for the proposed 157-unit mixed-use structure with 9,000 square feet of commercial space, but would fall within the density and uses anticipated in the Downtown Plan PEIR. Development consistent with the Downtown Plan would not result in citywide wastewater flows that would exceed total wastewater treatment capacity.

NO IMPACT NOT IDENTIFIED IN PREVIOUS EIR

- c) *Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?*

Hydro-3 - Prior to issuance of a building permit, the City Stormwater Management Division shall determine the need for the developer to conduct an analysis of the existing stormwater drainage system and to identify improvements needed to accommodate any projected increased runoff that would result from the proposed Project. The evaluation conducted by the developer shall include a determination of whether Low Impact Development (LID) practices and strategies should be incorporated into the project to reduce post development peak stormwater runoff

The Downtown Plan PEIR determined that the proposed project could increase the area covered by impervious surfaces, potentially increasing runoff quantities. New drainage infrastructure will be needed, potentially affecting off-site facilities.

Although the project area is substantially urbanized and improved with impervious surfaces, the proposed project would continue recent trends of converting vacant property or low-intensity developed areas containing landscaped areas and other pervious surfaces, into more intensely developed land uses such that potentially increased quantities of runoff would be directed to the City's stormwater collection system. This runoff also has the potential to carry pollutants and sediment. However, construction and operation of future development sites would be required to comply with all local, state and federal requirements pertaining to preservation of water quality and reduction of runoff, including Best Management Practices (BMPs) and the implementation of a Standard Urban Stormwater Mitigation Plan (SUSMP). Provisions of the City's regulations that

protect water quality, including Chapter 18.95 of the Municipal Code, would apply. In addition, earthwork for construction projects that would involve greater than one acre of land would require a National Pollutant Discharge Elimination System (NPDES) permit. Existing regulatory procedures are in place to reduce impacts from increased stormwater runoff, and will be reviewed during the plan check phase of development review.

NO IMPACT NOT IDENTIFIED IN PREVIOUS EIR

- d) *Have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed?*

The Downtown Plan PEIR determined that the proposed project would potentially increase the demand for water in the City and a Water Supply Assessment will be prepared to determine whether or not water supplies and infrastructure are adequate to serve the proposed development.

City water supplies are sufficient to meet the projected demand. As shown in Tables 4.13-4 and 4.13-5 for current and future LBWD water supplies and demand, LBWD would have the resources to meet the demand of the proposed Project during hydrologically normal and dry-year events. Not shown in these tables but available in, is LBWD's right to pump its carryover storage and to access other groundwater supplies in case of emergency per the adjudication of the basin. The reliability of the supplemental supply reflects MWD's reliability and MWD's commitment to regional water reliability. Table 4.13-6 shows the impact of the proposed Project on future supplies and demand during multiple dry years. The LBWD 2005 UWMP projected demand 20 years into the future and included the type of new demand the proposed project represents. Because of this 20-year projected demand, the "With Project" sections of Table 4.13-6 show the same overall total demand for potable water in the year 2025 as shown in Table 4.13-1. Therefore, the proposed Project would not have an impact on the supply and demand for water in fiscal year 2025, as the demand expected from the proposed Project was anticipated and planned for in the 2005 UWMP.

Development project built within the Downtown Plan that conform to the provisions of the plan have been anticipated by the LBWD and will not be required to prepare a project specific water availability supply assessment during the development review phase of the entitlement. This will be the case unless unanticipated water demand or significant changes in the circumstances or conditions affecting the availability of the public water system to provide sufficient supply of water for the proposed Project as noted in the WAA.

The proposed Project was reviewed by the Water Department and a no additional review was deemed necessary given that sufficient water supplies are available for the proposed mixed-use development.

NO IMPACT NOT IDENTIFIED IN PREVIOUS EIR

- f) *Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?*
- g) *Comply with federal, state, and local statutes and regulations related to solid waste?*

f), g) The Downtown Plan PEIR determined that the project would potentially increase the amount of solid waste generated within the City. Compliance with State waste diversion requirements and the potential effects of the increase in solid waste generation on regional landfill capacity was evaluated in the PEIR.

Adequate capacity exists within the Los Angeles County Sanitation Districts' Mesquite Regional Landfill in Imperial County. Mitigation measures Utilities-3(a), 3(b), 3(c) and 3(d) are to be implemented to reduce the volume of solid waste disposed of in a landfill.

Utilities-3(a) - All construction related to Project implementation shall include verification by the construction contractor that all companies providing waste disposal services recycle all demolition and construction-related wastes. The contract specifying recycled waste service shall be submitted to the City Building Official prior to approval of the certificate of occupancy.

Utilities-3(b) - In order to facilitate onsite separation and recycling of construction related wastes, all construction contractors shall provide temporary waste separation bins onsite during demolition and construction.

Utilities-3(c) - All future developments in the Project area shall include recycling bins at appropriate locations to promote recycling of paper, metal, glass, and all other recyclable materials. Materials from these bins shall be collected on a regular basis consistent with the City's refuse disposal program.

Utilities-3(d) - All Project area residents and commercial tenants shall be provided with educational materials on the proper management and disposal of household hazardous waste, in accordance with educational materials made available by the Los Angeles County Department of Public Works.

Planning staff will coordinate with Building Bureau officials during the Project's plan check phase to verify compliance with waste management, recycling and disposal of household waste. During the Project's construction phase, planning staff will perform a final inspection to verify compliance with all mitigation measures.

NO IMPACT NOT IDENTIFIED IN PREVIOUS EIR

CONCLUSION

Based on the analysis included in this Environmental Compliance Checklist, the proposed project will not result in any new environmental impacts not identified in the Downtown Plan PEIR. The proposed project does not meet the thresholds specified in Section 15162 of the *CEQA Guidelines* that would require subsequent environmental review.
