## DISCLAIMER

This report has been prepared for 888-5 Partners, LLC with specific application to a Phase II investigation conducted on the Property located at the southeast corner of the intersection of East 35<sup>th</sup> Street and Locust Avenue, Long Beach, California. The purpose of this investigation was to assess the potential for methane migration associated with oil operations, as well as assess impacts to soil at the Property from oil wells and appurtenant facilities on the Property.

The report has been prepared in accordance with the care and skill generally exercised by reputable professionals, under similar circumstances, in this or similar localities. No other warranty, express or implied, is made as to the professional opinions presented herein. No other party, known or unknown to SCS Engineers, is intended as a beneficiary of this work product, its content or information embedded therein. Third parties use this report at their own risk.

Changes in site conditions may occur due to variation in rainfall, temperature, water usage, or other factors. Additional information that was not available to the consultant at the time of this investigation or changes that may occur on the site or in the surrounding area may result in modification to the site that would impact the summary and recommendations presented herein. This report is not a legal opinion.

## 1 INTRODUCTION

SCS Engineers (SCS) was retained by 888-5 Partners, LLC to conduct a Phase II Site Investigation for the property located at the southeast corner of the intersection of East 35<sup>th</sup> Street and Locust Avenue in Long Beach, California. Investigation activities were conducted in accordance with SCS's proposal dated August 24, 2017 (Proposal No. 010789217). A map showing the general location of the Property and surrounding area is provided as **Figure 1**.

## BACKGROUND

The Property is approximately 0.76 acres and consists of four parcels that are currently used for oil production. The Property is currently occupied by three metal structures, two oil pumpjacks surrounded with fences, four above ground storage tanks (ASTs) surrounded by a secondary containment berm, an aboveground 3-stage clarifier, electrical panel with a utility pole, water truck, and piles of spare pipes. The Property is surrounded by a fence, which is accessible through a gated entrance along East 35<sup>th</sup> Street to the north.

SCS prepared a Phase I Environmental Site Assessment (Phase I ESA) report for the Property dated September 29, 2017. As part of the Phase I ESA, SCS identified the following Recognized Environmental Conditions (RECs) associated with the Property:

- The northwest portion of the Property is currently used for oil production, and the southeast portion of the Property has historically been used for oil production. Two existing wells and two plugged and abandoned wells along with four existing ASTs and an aboveground 3-stage clarifier are present. In addition, the Property is located within the Long Beach Oil Field and numerous wells and associated ASTs are present in the vicinity. Oil production on the Property and in the vicinity represents a REC.

The purpose of this investigation was to assess the potential for methane migration associated with oil operations, as well as evaluate the potential for impacts to the Property associated with the current and historical oil operations.

## 2 GEOLOGIC AND HYDROGEOLOGIC CONDITIONS

### PHYSIOGRAPHIC SETTING

According to the U.S. Geological Survey (USGS), Long Beach (1964, photorevised 1981), California 7.5-minute topographic map, the Property is located between the Vista del Mar and California Heights areas of Long Beach. It is located to the northwest of Signal Hill at an elevation of approximately 90 feet above mean sea level. The Property is situated approximately 0.85 miles east of the Los Angeles River and approximately 4 miles north of San Pedro Bay. Site topography is generally flat. Local topography slopes to the south, with a more regional slope to the southwest.

### GEOLOGY AND SOILS

Geologic maps indicate that surface sediments in this area consist of the Pleistocene-age Lakewood Formation, which is comprised of unconsolidated marine and continental deposits. In

the area of the Property, surface deposits are primarily fine-grained sediments comprised of sands, silts, and clays. The Lakewood Formation is underlain by at least several thousand feet of mostly marine sediments of Tertiary age. During the current investigation, soil was interpreted to range from sandy and clayey silt to fine sand down to depths of 15 feet below ground surface (bgs).

## GROUNDWATER

The Property is located within the West Coast Groundwater Basin. The first regional groundwater aquifer in the area is the Gage Aquifer within the Lakewood Formation. According to information reviewed on the California State Water Resources Control Board's GeoTracker website for the Bixby Knolls Car Wash (Global ID T0603701876 at 577 East Wardlow Road), located approximately 0.25 miles to the east-southeast), first groundwater is anticipated at approximately 31 feet bgs. Because the Property is located near the Long Beach Anticline and the Cherry Hill fault, groundwater flow directions may vary.

## 3 SITE INVESTIGATION AND ANALYTICAL RESULTS

### SUBSURFACE UTILITIES CLEARANCE

As required by law, SCS contacted Underground Service Alert prior to conducting any subsurface work (Dig Alert No. A72711084-01A). Goldak Inc. of Sylmar, California, conducted a geophysical survey to clear boring locations of subsurface utilities and other potential obstructions prior to initiating the investigation.

### SOIL SAMPLE COLLECTION

On October 5, 2017, under the direction of SCS, H&P Mobile Geochemistry Inc. (H&P) of Carlsbad, California collected soil samples from eight boring locations using a truck-mounted direct-push drill rig. Boring locations SB1 through SB8 are identified on **Figure 2**. Soil borings were drilled on all four parcels including in areas of the former and current oil wells and near the ASTs. The borings were continuously cored to a depth of 15 feet bgs in order to observe the soil for indications of contamination. Discrete soil samples were collected for laboratory analysis from each of the borings at the 1- (or 2 if no recovery at 1 foot), 5-, 10-, and 15-foot depths.

The drill rig was equipped with a hydraulic hammer and a 4-foot long, 2.25-inch diameter continuous core sampler. A pointed steel tip was fixed to the head of the solid core samplers and driven to the desired depth on a steel rod. Soil matrix samples were collected by retracting the drive tip through the center of the sampler with an inner rod, and hydraulically hammering the sampler an additional 1.5 to 2 feet. Soil samples were recovered in 4-foot long, 2-inch diameter pre-cleaned polycarbonate sleeves that had been placed inside the sampler. At each sampling interval, an approximately 6-inch section was cut from the sample sleeve at the appropriate interval and retained for submittal to the laboratory.

Soil samples were prepared in the field using EPA Method 5035, which included the collection of six aliquots of soil from each soil sample using a plunger/sub-sampler provided by the laboratory. The six aliquots of soil were immediately placed in 40 milliliter VOA (volatile organic analysis) vials as follows – five aliquots in VOAs with deionized (DI) water and one in a

methanol preservative. The samples preserved in DI water are frozen at the laboratory (within 48-hours of collection) until prepared for analysis. The polyethylene sample sleeve ends were covered with Teflon squares and sealed with plastic end caps. New nitrile gloves were used and frequently replaced in the handling of all soil samples to prevent cross-contamination.

A solvent-free label noting the date of collection, sample number, and project number was affixed to each sample container. Immediately following labeling, samples were placed in a chilled cooler to be submitted to Test America Environmental Laboratories Inc. (Test America) of Irvine, California, a California Department of Health Services-certified laboratory. Soil samples were selectively analyzed based on field observations, site history, and to provide representative data from across the Property. Select soil samples were analyzed for total petroleum hydrocarbons–carbon chain analysis (TPH) using EPA Method 8015M, volatile organic compounds (VOCs) using EPA Method 8260B/5035, and/or Title 22 metals using EPA Methods 6010B/7471A. Samples were tracked from the point of collection through the laboratory using proper chain-of-custody protocol. Samples were collected and analyzed using generally accepted regulatory procedures.

A portion of each sample sleeve was selected for soil classification, to screen samples with a photoionization detector (PID), and to examine for field indications of potential contamination, such as discoloration and odor. Boring logs recording the lithology and associated PID readings are provided in **Appendix A**.

### Soil Analytical Results

The Test America laboratory report, including chain-of-custody forms and quality assurance/quality control (QA/QC) data, are provided in **Appendix B**. As summarized on **Table 1**, a total of 24 samples were analyzed for TPH and VOCs. **Table 2** presents a summary of the 16 soil samples analyzed for metals.

As shown in **Table 1**, TPH in the diesel range (C<sub>13</sub>-C<sub>22</sub> [TPH-D]) was detected in 9 of 24 samples analyzed at concentrations ranging from 2.6 to 610 milligrams per kilogram (mg/kg). Heavy oil range hydrocarbons (C<sub>23</sub>-C<sub>40</sub> [TPH-O]) were detected in 14 of 24 samples at a concentrations ranging from 5.9 to 3,000 mg/kg. No gasoline range hydrocarbons (C<sub>4</sub>-C<sub>12</sub> [TPH-G]) or VOCs were detected in the 24 samples analyzed.

As shown in **Table 2**, all sixteen samples analyzed for metals had detections of multiple metals that included arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, nickel, vanadium, and zinc.

### SOIL VAPOR SAMPLING AND ANALYSIS

Under the direction of SCS, H&P installed six soil vapor probes at six locations designated SV1 through SV6. Soil vapor probes were installed throughout the Property at the locations depicted on **Figure 2**. Probes were installed at a depth of 5 feet bgs with the exception of SV6, which had a strong vacuum at 5 feet (and therefore could not be sampled) and was subsequently reinstalled at a depth of 4 feet bgs. Soil vapor sample locations are depicted on **Figure 2**.

Soil vapor probes were installed using a direct-push drill rig. Stainless steel rods were advanced to the target depth. The steel rods were retracted from each boring and new (clean) 1/8-inch diameter Nylaflow tubing, with a polypropylene filter placed on the bottom end, was inserted to the desired depth. Clean #2/12 Monterey sand was placed in a 6-inch vertical interval around each filter. A bentonite seal was placed above the sand pack for each probe. The remaining annular space was then backfilled with bentonite and hydrated. Sampling was conducted in general accordance with the *Advisory – Active Soil Gas Investigations*, published by the Regional Water Quality Control Board and Department of Toxic Substance Control in April 2012.

Following a minimum of 30 minutes after being set, the probes were purged to remove ambient air from the sampling system and ensure that the collected soil vapor samples were representative of soil conditions.

A total of six soil vapor samples, including one replicate sample for quality control purposes, were analyzed for VOCs using Method 8260SV (a modified version of EPA Method 8260B) in an on-site mobile laboratory provided by H&P. Samples were also collected from each probe in Tedlar bags and transported to H&P's fixed laboratory in Carlsbad, California for analysis of methane using EPA Method 8015M. In addition, the probes were measured in the field for pressure using a magnehelic gauge by SCS.

H&P is certified by the California Department of Health Services to conduct the specified analyses. Chain-of-custody documentation was completed in order to accurately track the samples from the point of collection through analysis. After all samples had been collected, the probes were removed and the surface repaired to match the surrounding area.

### Soil Vapor Analytical Results

The H&P laboratory report, chain-of-custody documentation and quality assurance/control (QA/QC) data are included in **Appendix C**.

Analytical results of soil vapor samples are summarized in **Table 3**. Four VOCs (benzene, toluene, m,p,-xylene, and isopropylbenzene) were detected in samples. Toluene was detected at a concentration of 3.2 micrograms per liter ( $\mu\text{g/l}$ ) in SV4, located on the southeast portion of the Property. Benzene, m,p-xylene, and isopropylbenzene were detected at concentrations of 0.38, 3.1, and 1.0  $\mu\text{g/l}$ , respectively, in the 4-foot soil vapor sample from SV6, located between the ASTs on the northeastern portion of the Property.

Methane was not detected any of the soil vapor samples, but positive pressure readings ranging from 0.1 to 0.8 inches of water (i.w.) were observed in three of the six locations (SV1, SV3, and SV4).

## 4 DISCUSSION OF ANALYTICAL RESULTS AND REGULATORY LIMITS

### METALS IN SOIL

Regulatory guidance for metals in soil is based on an evaluation of both background and risk-based concentrations. The Kearney Foundation of Soil Science published a report of background

concentrations of trace and major elements in California soils (Bradford et al, 1996). The California Department of Toxic Substances Control (DTSC), Human and Ecological Risk Office (HERO) issued Human Health Risk Assessment Note Number 3 (Note No. 3), most recently updated in August 2017. Note No. 3 provides DTSC-modified Screening Levels (DTSC-SLs) for soil, tap water, and ambient air for use in evaluating human health risks at hazardous waste sites and permitted facilities. For the majority of the listed chemicals, HERO Note No. 3 recommends the use of the U.S. Environmental Protection Agency (EPA) Regional Screening Levels (RSLs; most recently updated in June 2017), except in cases where DTSC has calculated or recommended a more stringent screening level (DTSC-SL). Human health risks associated with contact of contaminated soil (dermal, ingestion, etc.) in California can be assessed by comparing concentrations detected at the Property to the most stringent (or conservative) of these values for each metal, referred to by SCS as the DTSC-Recommended SLs and presented on **Table 2**.

As shown in **Table 2**, the analytical results for all metals in all samples analyzed were below or within the typical background concentration ranges for southern California soils (Bradford et al, 1996), with the exception of lead and zinc in three and four samples, respectively (SB3, SB5, SB6, and/or SB7).

Arsenic was detected in all sixteen samples at concentrations between 2.5 and 5.2 mg/kg, above the risk-based DTSC-Recommended SLs for residential and industrial land use. Although above screening levels, as previously stated, these concentrations are within background concentration ranges, and further, the detected concentrations are below the acceptable level of arsenic in soil in the range of 8 to 12 mg/kg for school sites in California as set by the DTSC.

Although zinc was detected above the typical background range in four samples (concentrations ranging between 280 and 440 mg/kg in the 1- or 2-foot depth samples only, they were well below the DTSC-Recommended SLs for residential and industrial land use of 23,000 and 350,000 mg/kg, respectively.

Lead was detected at concentrations above the typical background range at the 1-foot depth in samples SB5, SB6 and SB7. In addition, these concentrations were above the DTSC-Recommended SL of 80 mg/kg for residential sites but below the DTSC-Recommended SL of 320 for commercial/industrial land use.

Other metal concentrations were below the risk-based DTSC-Recommended SLs for residential and industrial land use. In summary, the concentrations of metals detected in soil would not be of concern to a regulatory agency for the proposed commercial use at the Property.

## TPH AND VOCS IN SOIL

There are no universal cleanup guidelines for TPH- and/or VOC-contaminated soils in California. Cleanup levels can vary based on a number of factors including the nature of the contamination, depth to groundwater, the beneficial uses of groundwater, soil type, human health risks (i.e., land use, residential vs. commercial/industrial scenarios), and regulatory oversight agency requirements. Actual cleanup goals are site-specific and based on applicable regulatory guidelines. Generally, regulatory guidelines that apply to the cleanup of specific chemical constituents in soil are related to one or more of the following issues:

- Potential impacts to groundwater
- Human health risks
- Waste disposal restrictions

Based on available information regarding the Property, the following guidelines may be applicable to the remediation and cleanup of impacted soils.

### Potential Impacts to Groundwater

The Los Angeles Regional Water Quality Control Board (RWQCB) has established cleanup guidelines, also known as soil screening levels (SSLs), for hydrocarbon-impacted soils based on the potential for groundwater contamination (RWQCB, 1996). Where impacted soils are anticipated to be between 20 and 150 feet above groundwater (assuming conservatively that groundwater is at approximately 30 feet bgs at the Property), the SSLs for petroleum hydrocarbons are:

- TPH-G or gasoline-range hydrocarbons (C<sub>4</sub>-C<sub>12</sub>) – 500 mg/kg
- TPH-D or diesel-range hydrocarbons (C<sub>13</sub>-C<sub>22</sub>) – 1,000 mg/kg
- TPH-O or oil/heavy-range hydrocarbons (C<sub>23</sub>-C<sub>40</sub>) – 10,000 mg/kg

These SSLs, along with the summary of analytical results, are also provided in **Table 1**. As shown on **Table 1**, the concentrations of TPH-D and TPH-O detected are well below their respective SSLs of 1,000 and 10,000 mg/kg, respectively. Based on this information and data from this investigation, there is no evidence of releases at the Property that may represent a risk to groundwater.

### Human Health Risks

Note No. 3 also describes DTSC-Recommended SLs for use in evaluating human health risks at hazardous waste sites and permitted facilities. No VOCs were detected in soil samples during the course of this investigation.

### Waste Disposal Restrictions

There are a number of state and federal regulations that relate to the disposal of contaminated soils. For the purposes of disposal, waste streams can be:

- Defined as hazardous in the regulations (e.g., soils containing spent solvents above specified limits for hazardous chemicals).
- Classified as hazardous on the basis of testing results for physical or chemical characteristics (i.e., toxic, reactive, ignitable, and/or corrosive).

In general soil containing petroleum hydrocarbons and/or solvents are not defined as “hazardous” under state and federal regulations. They may, however, exhibit “hazardous characteristics,” and should therefore be tested and characterized for disposal at an appropriate facility when excavated and removed. Under California regulations (Title 14 CCR, Division 7, Chapter 3, Article 5.6), contaminated soil that is excavated, and then either removed from or

placed back on the Property, may be subject to the requirements of the RWQCB or a Local Enforcement Agency (such as the Long Beach Department of Human Health Services).

Although the results of this investigation did not identify constituents of concern above generally-acceptable levels for commercial land use, low levels of TPH and lead were detected. Because the Property is currently and has historically been used for oil operations and storage, additional impacted soil could still be encountered during the redevelopment. If encountered during future site activities, potentially impacted soil should be characterized and, as appropriate, removed for proper disposal.

### VOCs in Soil Vapor

Note No. 3 also makes recommendations regarding the methodology and use of the RSLs and DTSC-SLs for soil vapor screening under residential and commercial/industrial land use scenarios.

The DTSC-Recommended SLs for evaluating soil vapor intrusion are calculated using indoor air screening levels and recommended attenuation factors. These calculated soil vapor screening levels are for samples collected near the source area either for existing buildings or future buildings (Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air, October 2011, DTSC). The term “near the source area” is considered to be at or just above the contaminant source, generally no more than five feet beneath a building foundation. The values calculated using Note No. 3 recommendations are conservative. Chemical concentrations in excess of the calculated DTSC-Recommended SLs are not conclusive evidence of adverse risks to human health. Additional investigation – such as sub-slab sampling, indoor air assessments, site-specific health risk assessments, etc. – may be warranted to further assess site-specific health risks.

The soil vapor results from this investigation were compared to the residential and commercial DTSC-Recommended SLs for a future building in **Table 3**. Of the four VOCs detected, the concentrations of toluene, m,p-xylene, and isopropylbenzene were well below their corresponding residential and commercial SLs. Benzene was detected at one location (SV6) at a concentration (0.38 µg/l) above the residential but below the commercial/industrial DTSC-Recommended SLs of 0.10 and 0.84 µg/l, respectively. Benzene was not detected in any of the other five vapor samples collected from the Property.

### Methane Results

As shown on **Table 3**, no methane was detected in the six soil vapor samples analyzed during this investigation. Subsurface gas pressure, between 0.1 and 0.8 inches of water, were detected during the investigation at three of the six soil vapor probe locations. Based on these data, there is no significant subsurface methane hazard associated with the Property.

## 5 CONCLUSIONS AND RECOMMENDATIONS

On October 5, 2017, SCS conducted soil and soil vapor investigation activities on the Property located at the southeast corner of the intersection of East 35<sup>th</sup> Street and Locust Avenue, Long Beach, California. Based on the results of this investigation, SCS has concluded the following:

- No TPH-G or VOCs were detected in any of the 24 soil samples analyzed.
- TPH-D and/or TPH-O were detected in 14 of 24 samples at concentrations below their respective Soil Screening Levels SSLs. These constituents were generally identified in shallow soils (5 feet or less), were not vertically extensive, and consistent with the current and historic oil exploration and production activities.
- Concentrations of metals detected at the Property were generally consistent with typical background concentration ranges for southern California soil and/or below the risk based DTSC-Recommended SLs for commercial/industrial land use.
- Four VOCs (benzene, toluene, isopropylbenzene and/or m,p-xylene) were detected in one of 6 soil vapor samples collected at the Property. With the exception of benzene, all VOC concentrations were well below DTSC-Recommended SLs for both residential and industrial land use. Benzene was detected in one sample above its residential but below its commercial/industrial DTSC-Recommended Screening Level.
- No methane was detected in the six soil vapor samples analyzed during this investigation. Based on these data, there is no significant subsurface methane hazard associated with the Property.

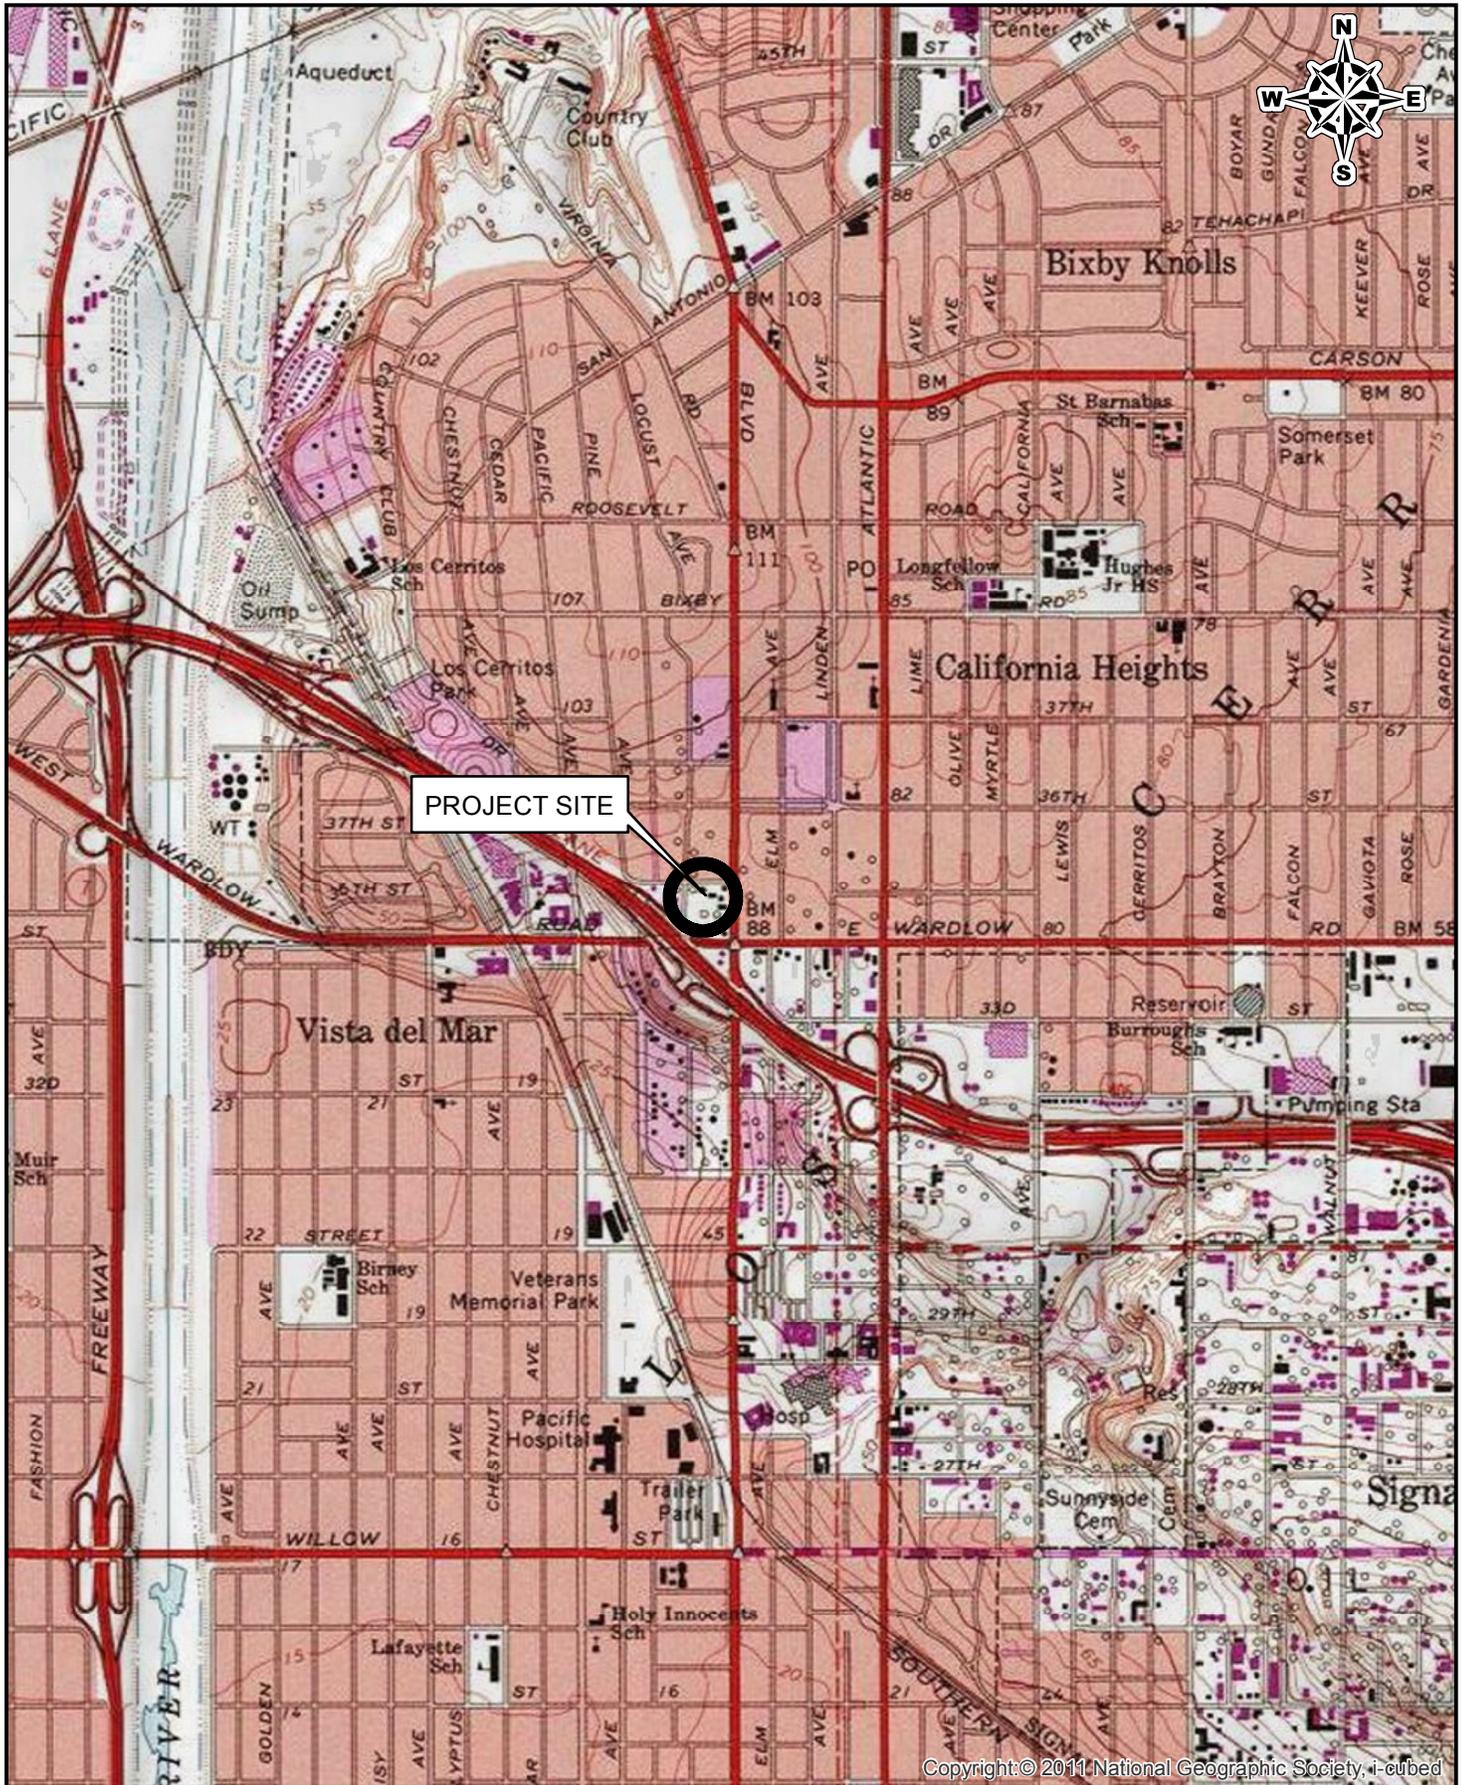

In summary, based on the results of this investigation and the proposed commercial use of the Property, there is no evidence of significant impact to the subsurface as a result of the current and historical oil-related activities. It is SCS's opinion, that no further investigation or remediation is warranted at this time. However, because the Property is to be redeveloped, it is likely that it will be necessary to expose the location of the former oil wells for re-abandonment and to abandon the existing wells to the current abandonment standards as well as dismantling of the current oil tanks and associated features. In addition, because the Property is located in an oil field, the City of Long Beach may require a methane barrier as part of the design plan.

Although the results of this investigation did not identify constituents of concern above generally-acceptable levels for commercial land use, low levels of TPH and lead were detected. Because the Property is currently and has historically been used for oil operations and storage, additional impacted soil could still be encountered during the redevelopment and a Soil Management Plan is recommended. If encountered during future site activities, potentially impacted soil should be characterized and, as appropriate, removed for proper disposal.

Notes:

bgs = below ground surface

\* = Bradford, G.R., Chang, A.C., Page, A.L., Bakhtar, D., Fampton, J.A., and Wright, H., 1996, *Background Concentrations of Trace and Major Elements in California Soils*, Kearney Foundation of Soil Science Special Report, Division of Agriculture and Natural Resources, University of California.

\*\* = Values in milligrams per liter (mg/L)

± = Value for Chromium (III) / Value for Chromium (VI)

DTSC-Recommended SL = Screening Level as recommended in California Department of Toxic Substances Control (DTSC), Office of Human and Ecological Risk (HERO), Human Health Risk Assessment (HHRA) Note No. 3 - Residential and industrial/commercial land use scenarios (August 2017 Referencing U.S. Environmental Protection Agency Regional Screening Level [RSL] Summary Table - June 2017).

TTL = Total Threshold Limit Concentration as identified in Title 22 of the California Code of Regulations. Wastes with concentrations above this value are considered hazardous for the purposes of disposal under California regulations.

STLC = Soluble Threshold Limit Concentration, in mg/L, as identified in Title 22 of the California Code of Regulations. A concentration of ten times the STLC is sometimes used as a trigger to conduct further analysis (i.e., the soluble analysis) of a sample to determine disposal requirements. Wastes with soluble concentrations above this value are considered hazardous for the

TCLP = Toxicity Characteristic Leaching Procedure concentration, in mg/L, as identified in the Code of Federal Regulations. Wastes with soluble concentrations above this value are considered hazardous for the purposes of disposal under federal regulations.

-- = Not analyzed/Not Applicable

## Narrative

**Job Narrative  
440-193786-1**

### Comments

No additional comments.

### Receipt

The samples were received on 10/6/2017 6:35 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 0.1° C and 2.9° C.

### Receipt Exceptions

The following samples was listed on the Chain of Custody (COC); however, no samples was received: SB6-10 (440-193786-5) and SB6-15 (440-193786-6). Only Received polyvinyl Sleeve for these samples

### GC/MS VOA

Method(s) 8260B: The continuing calibration verification (CCV) associated with batch 440-434635 recovered above the upper control limit for 2,2-Dichloropropane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: SB5-5 (440-193786-1), SB6-5 (440-193786-4), SB4-2 (440-193786-14), SB7-10 (440-193786-25) and (CCVIS 440-434635/2).

Method(s) 8260B: Surrogate recovery for 4-Bromofluorobenzene and Dibromofluoromethane for the following sample was outside the upper control limits: SB4-2 (440-193786-14). Re-extraction and/or re-analysis was performed with concurring results. Matrix interference was confirmed. The re-analysis has been reported.

Method(s) 8260B: Surrogate recovery for Dibromofluoromethane for the following sample was outside the upper control limit: SB7-10 (440-193786-25). This sample did not contain any target analytes; therefore, re-extraction and/or re-analysis was not performed.

Method(s) 8260B: Internal standard (ISTD) response for 4-Bromofluorobenzene the following sample was below control limits: SB2-1 (440-193786-15), SB4-2 (440-193786-14). The sample(s) was re-extracted and/or re-analyzed with concurring results, and the original set of data has been reported.

Method(s) 8260B: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for batch analytical batch 440-434964 recovered outside control limits for the following analytes: 1,1,1-Trichloroethane, 1,1-Dichloroethene, 2,2-Dichloropropane, Carbon tetrachloride, Dichlorodifluoromethane, n-Butylbenzene and Trichlorofluoromethane. Recoveries for both LCS and LCSD were within acceptance criteria and precision was within limits for the MS/MSD for these analytes.

Method(s) 8260B: The matrix spike / matrix spike duplicate (MS/MSD) precision for analytical batch 440-434964 was outside control limits. Sample matrix interference is suspected. The individual recoveries met acceptance criteria.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

### GC VOA

Method(s) 8015B: Surrogate recovery for the following sample(s) was outside control limits: low recovery. Re-analysis was performed with concurring results. The original analysis has been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

### GC Semi VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

### Metals

Method(s) 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision for preparation batches 440-434120 and 440-434076 were outside control limits for Barium and Antimony. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample recoveries was within acceptance limits.

# Case Narrative

Client: SCS Engineers  
Project/Site: 9217033.03 T2

TestAmerica Job ID: 440-193786-1

---

## Job ID: 440-193786-1 (Continued)

---

### Laboratory: TestAmerica Irvine (Continued)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### Organic Prep

Method(s) 3546: The following samples was diluted due to the nature of the sample matrix: SB4-5 (440-193786-7), SB4-10 (440-193786-8), SB3-5 (440-193786-10), SB3-10 (440-193786-11), SB3-2 (440-193786-13), SB4-2 (440-193786-14), SB2-1 (440-193786-15), SB2-5 (440-193786-16), SB1-5 (440-193786-20), SB1-10 (440-193786-21), SB7-1 (440-193786-23), SB7-5 (440-193786-24), SB7-10 (440-193786-25), SB8-1 (440-193786-27), SB8-5 (440-193786-28), SB8-10 (440-193786-29), SB6-1 (440-193786-32), (440-193786-1), SB6-5 (440-193786-4) and SB6-10 (440-193786-5), (440-193786-G-7 MS) and (440-193786-G-7 MSD). Elevated reporting limits (RLs) are provided.

Method(s) 3546: Due to the matrix, the following samples could not be concentrated to the final method required volume: 2SB3-2 (440-193786-13), SB4-2 (440-193786-14), SB5-1 (440-193786-31) and SB6-1 (440-193786-32). The reporting limits (RLs) are elevated proportionately.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### VOA Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

**Matrix: Solid**

## Method: 8260B - Volatile Organic Compounds (GC/MS) (Continued)

Analyte	Result	Qualifier	RL	MDL	Unit	D	Prepared	Analyzed	Dil Fac
Trichloroethene	ND		2.8	1.4	ug/Kg		10/11/17 09:48	10/11/17 15:57	1
Trichlorofluoromethane	ND		7.0	1.4	ug/Kg		10/11/17 09:48	10/11/17 15:57	1
Vinyl chloride	ND		7.0	1.4	ug/Kg		10/11/17 09:48	10/11/17 15:57	1
Xylenes, Total	ND		5.6	2.8	ug/Kg		10/11/17 09:48	10/11/17 15:57	1
p-Isopropyltoluene	ND		2.8	1.4	ug/Kg		10/11/17 09:48	10/11/17 15:57	1
Surrogate	%Recovery	Qualifier	Limits				Prepared	Analyzed	Dil Fac
Toluene-d8 (Surr)	114		79 - 123				10/11/17 09:48	10/11/17 15:57	1
4-Bromofluorobenzene (Surr)	119		79 - 120				10/11/17 09:48	10/11/17 15:57	1
Dibromofluoromethane (Surr)	107		60 - 120				10/11/17 09:48	10/11/17 15:57	1

## Method: 8015B - Gasoline Range Organics - (GC)

Analyte	Result	Qualifier	RL	MDL	Unit	D	Prepared	Analyzed	Dil Fac
GRO (C4-C12)	ND		440	170	ug/Kg		10/12/17 09:12	10/12/17 13:04	1
Surrogate	%Recovery	Qualifier	Limits				Prepared	Analyzed	Dil Fac
4-Bromofluorobenzene (Surr)	68		65 - 140				10/12/17 09:12	10/12/17 13:04	1

## Method: 8015B - Diesel Range Organics (DRO) (GC)

Analyte	Result	Qualifier	RL	MDL	Unit	D	Prepared	Analyzed	Dil Fac
C13-C22	610		100	52	mg/Kg		10/10/17 16:47	10/16/17 10:45	5
C23-C40	3000		100	52	mg/Kg		10/10/17 16:47	10/16/17 10:45	5
Surrogate	%Recovery	Qualifier	Limits				Prepared	Analyzed	Dil Fac
n-Octacosane	138		40 - 140				10/10/17 16:47	10/16/17 10:45	5

## Method: 6010B - Metals (ICP)

Analyte	Result	Qualifier	RL	MDL	Unit	D	Prepared	Analyzed	Dil Fac
Antimony	ND		9.9	4.9	mg/Kg		10/10/17 11:01	10/10/17 21:49	5
Arsenic	4.0		3.0	1.5	mg/Kg		10/10/17 11:01	10/10/17 21:49	5
Barium	690		1.5	0.74	mg/Kg		10/10/17 11:01	10/10/17 21:49	5
Beryllium	0.50		0.49	0.25	mg/Kg		10/10/17 11:01	10/10/17 21:49	5
Cadmium	0.53		0.49	0.25	mg/Kg		10/10/17 11:01	10/10/17 21:49	5
Chromium	23		0.99	0.49	mg/Kg		10/10/17 11:01	10/10/17 21:49	5
Cobalt	4.9		0.99	0.49	mg/Kg		10/10/17 11:01	10/10/17 21:49	5
Copper	33		2.0	1.1	mg/Kg		10/10/17 11:01	10/10/17 21:49	5
Lead	110		2.0	0.99	mg/Kg		10/10/17 11:01	10/10/17 21:49	5
Molybdenum	130		2.0	0.99	mg/Kg		10/10/17 11:01	10/10/17 21:49	5
Nickel	32		2.0	0.99	mg/Kg		10/10/17 11:01	10/10/17 21:49	5
Selenium	ND		3.0	1.7	mg/Kg		10/10/17 11:01	10/10/17 21:49	5
Thallium	ND		9.9	4.9	mg/Kg		10/10/17 11:01	10/10/17 21:49	5
Vanadium	30		0.99	0.49	mg/Kg		10/10/17 11:01	10/10/17 21:49	5
Zinc	250		4.9	2.5	mg/Kg		10/10/17 11:01	10/10/17 21:49	5
Silver	ND		1.5	0.88	mg/Kg		10/10/17 11:01	10/10/17 21:49	5

## Method: 7471A - Mercury (CVAA)

Analyte	Result	Qualifier	RL	MDL	Unit	D	Prepared	Analyzed	Dil Fac
Mercury	0.093		0.020	0.012	mg/Kg		10/13/17 19:46	10/16/17 23:39	1

## Qualifiers

### GC/MS VOA

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery is outside acceptance limits.
*	ISTD response or retention time outside acceptable limits
X	Surrogate is outside control limits
*	RPD of the LCS and LCSD exceeds the control limits
F2	MS/MSD RPD exceeds control limits

### GC VOA

Qualifier	Qualifier Description
X	Surrogate is outside control limits

### GC Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

### Metals

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F2	MS/MSD RPD exceeds control limits

## Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

# Accreditation/Certification Summary

## Login Sample Receipt Checklist

Client: SCS Engineers

Job Number: 440-193786-1

**Login Number: 193786**

**List Number: 1**

**Creator: Garcia, Veronica G**

**List Source: TestAmerica Irvine**

Question	Answer	Comment
Radioactivity wasn't checked or is <math>\leq</math> background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

**APPENDIX C**  
**H&P LABORATORY REPORT**

---

11 October 2017

Ms. Ashley Hutchens  
SCS Engineers - Long Beach  
3900 Kilroy Airport Way, Suite 100  
Long Beach, CA 90806-6816

H&P Project: SCS100517-L3  
Client Project: 01217033.03 Task 2 / E 35th St

Dear Ms. Ashley Hutchens:

Enclosed is the analytical report for the above referenced project. The data herein applies to samples as received by H&P Mobile Geochemistry, Inc. on 05-Oct-17 which were analyzed in accordance with the attached Chain of Custody record(s).

The results for all sample analyses and required QA/QC analyses are presented in the following sections and summarized in the documents:

- Sample Summary
- Case Narrative (if applicable)
- Sample Results
- Quality Control Summary
- Notes and Definitions / Appendix
- Chain of Custody
- Sampling Logs (if applicable)

Unless otherwise noted, I certify that all analyses were performed and reviewed in compliance with our Quality Systems Manual and Standard Operating Procedures. This report shall not be reproduced, except in full, without the written approval of H&P Mobile Geochemistry, Inc.

We at H&P Mobile Geochemistry, Inc. sincerely appreciate the opportunity to provide analytical services to you on this project. If you have any questions or concerns regarding this analytical report, please contact me at your convenience at 760-804-9678.

Sincerely,

Janis La Roux  
Laboratory Director

H&P Mobile Geochemistry, Inc. is certified under the California ELAP and the National Environmental Laboratory Accreditation Conference (NELAC). H&P is approved as an Environmental Testing Laboratory and Mobile Laboratory in accordance with the DoD-ELAP Program and ISO/IEC 17025:2005 programs, accreditation number 69070 for EPA Method TO-15, H&P Method TO-15, EPA Method 8260B and H&P 8260SV.

### Notes and Definitions

- S-04      The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
- LCC      Leak Check Compound
- ND      Analyte NOT DETECTED at or above the reporting limit
- MDL      Method Detection Limit
- %REC      Percent Recovery
- RPD      Relative Percent Difference

All soil results are reported in wet weight.

### Appendix

H&P Mobile Geochemistry, Inc. is approved as an Environmental Testing Laboratory and Mobile Laboratory in accordance with the DoD-ELAP Program and ISO/IEC 17025:2005 programs, accreditation number 69070 for EPA Method TO-15, H&P Method TO-15, EPA Method 8260B and H&P 8260SV.

H&P is approved by the State of Arizona as an Environmental Testing Laboratory and Mobile Laboratory, certification numbers AZM758 and AZ0779.

H&P is approved by the State of California as an Environmental Laboratory and Mobile Laboratory in conformance with the Environmental Laboratory Accreditation Program (ELAP) for the category of Volatile and Semi-Volatile Organic Chemistry of Hazardous Waste, certification numbers 2740, 2741, 2743, 2744, 2745, 2754 & 2930.

H&P is approved by the State of Florida Department of Health under the National Environmental Laboratory Accreditation Conference (NELAC) certification number E871100.

The complete list of stationary and mobile laboratory certifications along with the fields of testing (FOTs) and analyte lists are available at [www.handpmg.com/about/certifications](http://www.handpmg.com/about/certifications).

H&P Project: SCS100617-10  
Client Project: 01217033.03 Task 2 / E 35th st

Dear Ms. Ashley Hutchens:

Enclosed is the analytical report for the above referenced project. The data herein applies to samples as received by H&P Mobile Geochemistry, Inc. on 05-Oct-17 which were analyzed in accordance with the attached Chain of Custody record(s).

The results for all sample analyses and required QA/QC analyses are presented in the following sections and summarized in the documents:

- Sample Summary
- Case Narrative (if applicable)
- Sample Results
- Quality Control Summary
- Notes and Definitions / Appendix
- Chain of Custody
- Sampling Logs (if applicable)

Unless otherwise noted, I certify that all analyses were performed and reviewed in compliance with our Quality Systems Manual and Standard Operating Procedures. This report shall not be reproduced, except in full, without the written approval of H&P Mobile Geochemistry, Inc.

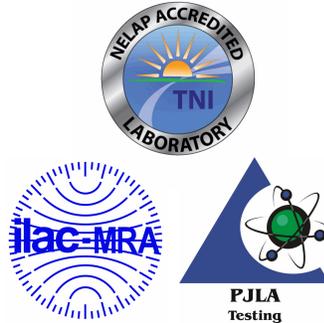

We at H&P Mobile Geochemistry, Inc. sincerely appreciate the opportunity to provide analytical services to you on this project. If you have any questions or concerns regarding this analytical report, please contact me at your convenience at 760-804-9678.

Sincerely,

Janis La Roux  
Laboratory Director

H&P Mobile Geochemistry, Inc. is certified under the California ELAP and the National Environmental Laboratory Accreditation Conference (NELAC). H&P is approved as an Environmental Testing Laboratory and Mobile Laboratory in accordance with the DoD-ELAP Program and ISO/IEC 17025:2005 programs, accreditation number 69070 for EPA Method TO-15, H&P Method TO-15, EPA Method 8260B and H&P 8260SV.

MDL      Method Detection Limit  
%REC      Percent Recovery  
RPD      Relative Percent Difference

All soil results are reported in wet weight.

### Appendix

H&P Mobile Geochemistry, Inc. is approved as an Environmental Testing Laboratory and Mobile Laboratory in accordance with the DoD-ELAP Program and ISO/IEC 17025:2005 programs, accreditation number 69070 for EPA Method TO-15, H&P Method TO-15, EPA Method 8260B and H&P 8260SV.

H&P is approved by the State of Arizona as an Environmental Testing Laboratory and Mobile Laboratory, certification numbers AZM758 and AZ0779.

H&P is approved by the State of California as an Environmental Laboratory and Mobile Laboratory in conformance with the Environmental Laboratory Accreditation Program (ELAP) for the category of Volatile and Semi-Volatile Organic Chemistry of Hazardous Waste, certification numbers 2740, 2741, 2743, 2744, 2745, 2754 & 2930.

H&P is approved by the State of Florida Department of Health under the National Environmental Laboratory Accreditation Conference (NELAC) certification number E871100.

The complete list of stationary and mobile laboratory certifications along with the fields of testing (FOTs) and analyte lists are available at [www.handpmg.com/about/certifications](http://www.handpmg.com/about/certifications).
