Recommendation to authorize City Manager to execute a Master Agreement and all related grant project documents with Public Health Foundation Enterprises Inc., dba PHFE Management Solutions, to provide services relating to the identification, application, and fiscal sponsorship of Health Information Technology grants for a period of three years, with an option to extend the Agreement for two additional one-year periods. (Citywide)

The City of Long Beach Department of Health and Human Services (DHHS) is requesting City Council approval to enter into an agreement with Public Health Foundation Enterprises (PHFE) to assist in identifying funding to support existing technology projects at the DHHS. Health information technology is a critical requirement in addressing local public health issues. Health information technology is an emerging field with numerous initiatives at the federal and state level designed to improve patient care, eliminate duplication of medical procedures, and reduce healthcare costs. A critical element of health information technology is the timely receipt of public health data related to the early detection and prevention of communicable diseases.

The DHHS is currently working on two health information technology initiatives: the Long Beach Health information System (HIS) and the Long Beach Network for Health (LBNH). The HIS will provide a technology solution for our public health clinics, including billing and patient record management. LBNH is a health information exchange project intended to improve the quality of patient care across all healthcare provider settings in Long Beach. Under the proposed Master Agreement, PHFE Management Solutions (PHFE) would, as necessary, assist in identifying health information technology grants, assist in grant preparation and application, and serve as fiscal agent or sponsor. The City will retain ownership of all software and hardware purchased through these grants at the termination of this agreement.

PHFE, a non-profit organization, was selected as a partner due to its extensive public health technology expertise. PHFE is currently supporting projects funded by the United States Centers for Disease Control and Prevention, as well as several Department of Homeland Security grants related to bioterrorism preparedness. PHFE has demonstrated technology capacity and skill sets to develop competitive grants and successfully perform the grant scopes of work. The grants will be limited to funding supporting health information system and health information exchange projects.

This matter was reviewed by Senior Deputy City Attorney Donna F. Gwin on November 16, 2005 and Budget Management Officer David Wodynski on December 9, 2005.

City Council approval is requested on January 10, 2006 to allow the DHHS and PHFE to begin identifying and applying for applicable grant projects.

The approval of the master agreement carries no fiscal impact, but will allow PHFE to apply for technology grants as the City's fiscal sponsor. The grant project documents will specify

the scope of work and dollar amount for each individual grant. As fiscal sponsor, PHFE will retain a percentage of each grant not to exceed eight percent (8 percent) of the total grant award, which will be paid by the granting agency. The Department will request appropriations for specific grants in the Health Fund (SR 130) as these are awarded.

Approve recommendation.

RONALD R. ARIAS
DIRECTOR HEALTH AND HUMAN SERVICES
